Serving The Central and Southeastern Pennsylvania Areas

Vol. 20 No. 42 | Lancaster Farming, Saturday, September 6, 1975 | $3.00 Per Year

Improved farm outlook seen

By Dieter Krieg

Note: This report is compiled from the following sources of information: 1..The 12th annual Northeast Regional Outlook Conference which was held in Lancaster this past Wednesday and Thursday with specialists and economists from a number of agricultural colleges in attendance; 2..Recently - received bulletins from the Departments of Agriculture in Washington and Harrisburg; 3..Reports from private businesses; and 4..The Wall Street Journal.

There are some important thoughts to keep in mind in interpreting these trends and assumptions. Dr. John Crothers, a marketing specialist at the University of Maryland, who spoke on the grain and feed outlook, described the agricultural outlook as involving "massive uncertainty." Stirring up some laughter, he likened this "anything may happen" condition to mothers who 20 years ago had their little daughters vaccinated in places they thought wouldn't show.

Jessee Cooper, Penn State extension ag economist, who served as chairman for the Thursday session, stressed that "You can't ignore what's happening over the fence ... there's a lot of interrelationship between ag businesses." That statement became more apparent all throughout the conference as speaker after speaker noted that what happens in one market will have an effect on the others.

Dairy

The House Agriculture Dairy Subcommittee has scheduled hearings in Pennsylvania for Sept. 19 to determine if the dairy crisis is real and what Washington might be able to do about it. This follows a USDA dential last month to milk producers' requests for a hearing to consider emergency adjustment of fluid milk prices to bring them more in line with production costs.

Milk supplies could shrink, according to some sources, if government action is not forthcoming soon. Representative William C. Wampler, ranking Republican on the House Agriculture Committee, warned that "unless the governments acts, and acts soon enough, it is inevitable that even greater numbers of dairy farmers will sell out or go bankrupt. The Virginia congressman noted that 18 percent of the nation's dairymen have quit in the past three years, leaving only 300,000 in business.

"Any continuing reduction in the number of milk producers can only cause a scarcity of milk supply and could even bring about rationing," Wampler said in a full page statement which appeared in the Washington Post.

Opinions about a milk shortage are mixed. Production is expected to continue slightly below a year earlier, but a "steady to stronger" trend in milk prices this fall should avoid short supplies. Wampler himself notes that although there have been shortages and rationing of other food items, there has never been a national shortage of milk.

Wampler believes that a "worse dairy crisis" can still be averted if the Administration and Congress act immediately.

Fred Webster of the University of Vermont Extension Service claims: "Low cull cattle prices and unemployment are widely believed to have discouraged many dairymen from culling or even selling out." According to Virgil Crowley, Penn State, dairy and beef culling programs would be better off to go ahead now rather than later because of expected drops in prices.

Butter sales have increased by 25 to 30 percent, Webster reported, with prices rising right along with it, due in part to the lower butter production. The Vermont dairy specialist noted that there is a shift in manufactured dairy products which is going from hard products such as butter, cheese and non-fat dry milk, to soft items like ice cream and cottage cheese. "We're moving to a better situation as far as supply and demand are concerned," he explained.

Webster pointed out that it normally takes 10 months for farmers to respond to marketing conditions. The price increases for dairy products seen at the store now won't be noticed on the farm until October or November. Webster predicts rising prices this fall and says dairymen "are in for a new ballgame."

Prices are expected to go up - although it is not certain by how much and how soon - because of declining production and stocks. The Minnesota - Wisconsin price series is expected to go up to $8.10 this winter and remain there for the first half of 1976.

Webster expects "high feed prices and a lag in farmer optimism behind price changes to cause enough culling this fall to restrict production well into next year. He also expects the economics of dairying to force more operators into bigger operations and notes the average herd in Vermont now has 60 cows. His figures show larger dairy farms making more profit than the smaller ones, he said.

One observation the professors made while in Lancaster was that a small glass of milk costs 40 cents; a larger one goes for 60 cents.

Price Index

Prices received by farmers during August remained unchanged when compared to July of this year. Lower Prices for cattle, potatoes and

Local Livestock Market, Auction News

Lancaster Market

Due to holiday no market report available.

Omaha Auction

Sept. 4

Weekly 51 - cattle - compared with the previous week's close - for the holiday shortened period, prices on slaughter steers and heifers were steady to firm, instances 25-50c higher on steers, following the sharp advance of previous week. Cows closed 50-1.00 lower and bulls were weak to 1.00 lower.

Three day receipts 11,100 as compared 1,000 for previous full four days, and 11,300 a year ago. Slaughter steers approximately 37 percent of weeks supply, heifers 30 percent, cows 16 percent and feeders for Friday auction 15 percent.

The fed cattle trade followed a stable course following the Labor Day holiday. Most interest came into the week with fair live inventories on hand and the moderate marketings balanced out well with the numbers needed to fill out requirements for the shortened slaughter period. The steer and heifer supply mainly good to average-choice, but there was a slight decrease in the volume of short fed 900-950 lb. steers and 700-750 lb. heifers. Demand fairly good despite a record slaughter for the week ended August 30th and Tuesday's estimated slaughter of 146,000 promised to set a daily record.

Four loads choice 1150-1225 lbs. yield grade 3-4 51.00 with high-choice and prime absent. Choice 1125-1235 lbs. yield grade 2-4 48.00-50.50. Choice 950-1125 lbs. mainly yield grade 3 47.50-49.00. Mixed good and choice 900-1175 lbs. 44.50-47.50, occasionally 47.75-48.00 on 1150-1175 lbs. good 41.00-44.50. Standard and low-good 35.50-37.50, two loads low-good 1266 lb. Holsteins yield grade 2-3 38.50.

Local Grain

Thursday, Sept. 4

These prices are made up of the average prices quoted by a number of participating local feed and grain concerns. It should be noted, however, that not every dealer or broker handles each commodity. All prices are per bushel except ear corn which is per ton.

The average local grain prices quoted Thursday, Sept. 4, 1975 are as follows:

	Buy+	Sell+
Ear Corn	69.50	77.00
Shelled Corn	2.78½	3.01
Oats		
Local	1.50	1.73
Western	1.71	1.96
Barley	1.75	1.83½
Wheat	3.26	3.57

+Buy is the price the dealer will buy from the farmer delivered to the mill. Sell is the price the dealer will sell for at his mill.

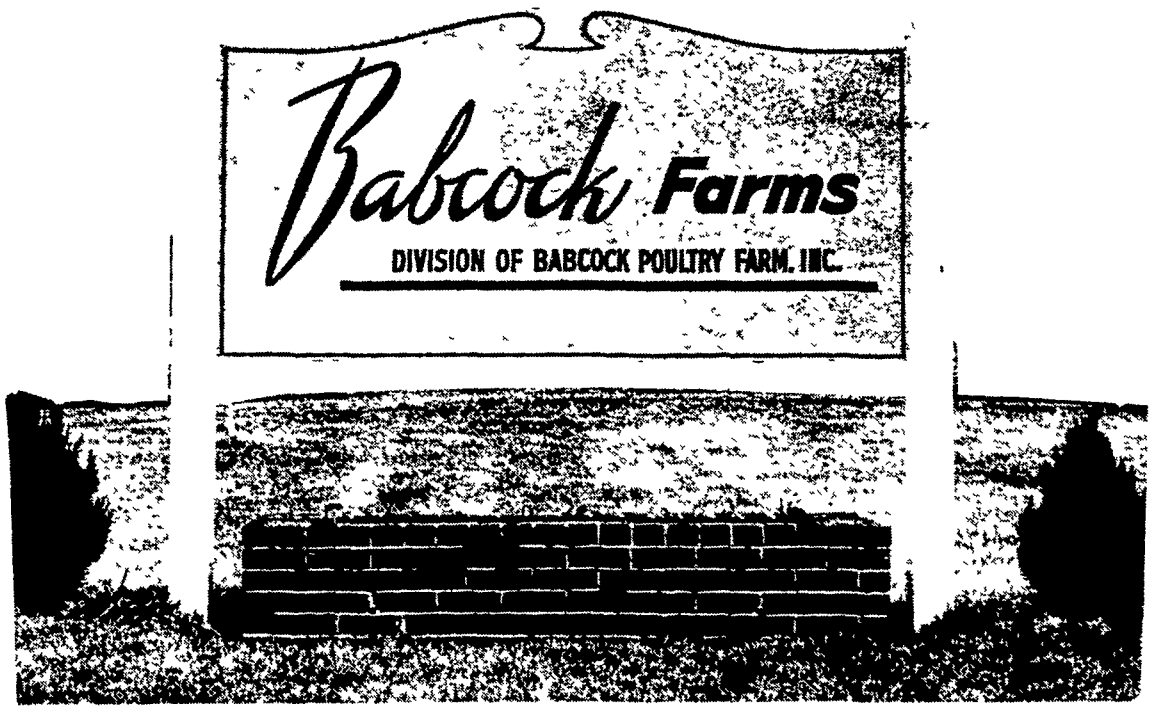
Janet Basehoar

The friendly voice our customers hear when they call Babcock Farms is Mrs. Janet Basehoar. Janet is a 8 year employee of Babcock Farms.

Mrs. Basehoar is responsible for the compiling and computation of many of the records we keep at Babcock Farms. An important section of Janet's work is the billing of invoices to our customers. Janet is another of the quality people employed at Babcock Farms. Good people to do business with.

"The Sign of Quality"



Our 1975 model Babcock B-300 layer is the best layer we have produced at Babcock Farms The 1975 B-300 is superior to previous B-300 layers in two important profit traits.

1. Less Feed per Dozen Eggs

2 More Marketable Eggs per Bird

Improvements in these two critical profit traits are meaningful to you, our customers. Our Babcock layer gives **you** the opportunity to **make money.** Take this opportunity today, order your next chicks or started pullets from Babcock Farms. You will like doing business with us.

THE OLD FARMER'S ALMANAC

SEPT. 8-14, 1975

Morning dues and some fall hues.

Most children are going back to school now, so drive carefully . . . Everyone's making apple cider now . . . First quarter of the moon Sept. 12 . . . Shortest twilights this week . . . Average length of days for week, 12 hours, 43 minutes . . . Air mail from NYC to San Francisco took four days in 1920 . . . Russians hit the moon Sept. 12, 1959 . . . Being unhappy in this season is almost like treason.

Old Farmer's Riddle: What's the only coat you put on wet? (Answer below.)

Ask the Old Farmer: We have a camp in the mountains and we are bothered by bats. We have taken the usual precautions of caulking all noticeable cracks. Can you suggest an effective method of ridding our camp of bats? C. N., Brattleboro, Vt.

Open things up so the critters can fill the place, and when they are stowed away in the daytime, touch off a few sulphur candles.

Home Hints One of the best ways to remove rust from outside metal fixtures is with steel wool dipped in kerosene Follow by polishing with liquid wax *Riddle answer* A coat of paint

OLD FARMER'S WEATHER FORECASTS

New England: Most of week is mild and fair, except for possible hurricane at start and storm midweek.

Greater New York-New Jersey: Possible hurricane to start, some rain midweek; rest of week clear.

Middle Atlantic Coastal: Week begins clear, continues through midweek; latter part cloudy with highs in upper 90's.

Piedmont and Southeast Coastal: Hurricane possible first part of week; becoming clear and very hot by week's end.

Florida: Hot and partly cloudy throughout, with some thundershower activity; sunny all week on Gulf.

Upstate and Western N.Y.-Toronto and Montreal: Week begins with heavy rain in the east, hurricane, then clearing; latter part rainy.

Greater Ohio Valley: Mostly clear and hot throughout week, with high temperatures near 100 by week's end.

Deep South: Heavy rain in the west and Gulf to start, then clear and warm in central and north; latter part hot.

Chicago and Southern Great Lakes: First part of week clear and hot, then becoming partly cloudy; heavy rain in east by week's end.

Northern Great Plains-Great Lakes: Generally clear and hot through midweek, then rain in central and east, cooler at the end.

Central Great Plains: Clear and hot in south and west to start, then showers in north by midweek, weekend is rainy.

Texas-Oklahoma: Entire week is clear and very hot, with a few showers along the Gulf.

Rocky Mountain: Except for heavy rain in central and north midweek, mostly clear and warm all week.

Southwest Desert: Continued clear and hot weather, with thundershowers in southwest midweek.

Pacific Northwest: Partly sunny and warm throughout; moderately heavy rain latter part.

California: Week begins with rain in south, then clearing clear and very warm in north.

(All Rights Reserved, Yankee, Inc., Dublin, N H. 03444)

New York Dressed Meats

September 4

Daily distrubutive - less than carlot meat trade.

Compared with Wednesday: prices mostly weak for beef, veal, calf & lamb. Pork no better than steady for all listed cuts.

Pork sellers feel edge is off as far as local market is concerned & retailers less aggressive than early. Lamb chucks accumulated in spots while outlet for beef, veal & calf only fair at best.

Steer Beef

Kosher Steer Beef

Choice & Prime Forequarters 67.00-69.50.

Farm Problem

One neighbor's farm is so muddy they have to jack up the cows to milk them The wife though, is so clean that one day she scrubbed the kitchen floor too hard and went right through into the basement And the husband? He's so strong that when his horse fell in a well he dug up the whole thing and gently poured the horse out

will you be ready?

harvest time is just around the corner — are you ready for it? Will your present drying facilities or arrangements allow you to harvest at top speed? Can your grain handling equipment keep up? And, to protect yourself from selling at what may be the lowest prices of the year will you have the necessary storage capacity for holding?

There s still time to get the equipment and storage you need by visiting your modern farm systems center The experienced people there can provide you with the information you need in planning and financing your grain drying, storage, and handling needs Also remember the 10% investment credit available to you But, time is running short — act now and be assured of getting the equipment you need installed for the coming harvest

Alfalfa management tips given

Alfalfa and alfalfa grass mixtures continue to be excellent hay and silage crops for Southeast Pennsylvania farmers, in spite of rising production costs and all the problems we've had with alfalfa this past growing season. However, alfalfa requires a lot of management, and in a year like this year - a lot of patience, too! Do not let the disappointments of this past year discourage you on alfalfa or on alfalfa grass mixtures. This was an exceptional year; you should be planning your farming operations around normal situations and normal years.

A. To Increase Yields Next Spring -

1. Do not cut alfalfa between September 1 and September 15 in S.E. Pennsylvania. During this critical period of time, alfalfa plants are forming new rhizomes just below ground level. These rhizomes produce next Spring's growth of alfalfa. Thus, harvesting alfalfa during the first 2 weeks of September can reduce the number of rhizomes formed - and next year's yield, too.

B. To Increase The Life of Your Alfalfa Stand -

1. Be "easy" with your last cutting, especially if your first cutting was made at one-tenth bloom or earlier, or if your stand was severely stressed this summer by diseases, insects and wet conditions.

- Do not cut between September 1 and the first killing frost. This gives the plant a month or more to build up the energy reserves in its root system to help carry it through the winter and to produce new growth next spring.

2. Top dress after last cutting; maintain high levels of potash. Do not topdress with manure; the nitrogen will only encourage weeds and grasses and it will shorten the life of the stand.

3. If any late cuttings are made after a killing frost, they should be made before October 15. Also leave about 4 inches of stubble to help protect the crown and to help catch snow for winter cover.

4. Spring and fall cutting schedules are closely related in terms of stand persistence. If first cutting was made at mid bloom or later, and if the stand was not severely stressed during the summer, last cutting can be made at any time before October 15.

C. To Control All Those Yellow Weeds in Next Springs' Alfalfa -

Now is the time to control winter annual weeds in alfalfa. Some of these weeds include: 1. yellow rocket or winter cress (the yellow-flowered weed that most people mistake for wild mustard). 2. wild mustard (it's also yellow-flowered, but it's bushier and comes later than yellow rocket), 3. shepherds purse and penny cress (both of these are white-flowered), and 4. chickweed (the low-growing, matted weed that chokes out alfalfa and interferes with cutting and drying operations).

All of these weeds are winter annuals that germinate in the fall (now). They can be controlled by spraying this fall. However, do not expect the same 100 percent control you may be used to seeing in your corn fields. Some of these weeds act as biennials; it takes them 2 years to reach maturity and die a natural death. And, the sprays only work on the new seedlings that germinate this fall - not on those weeds already established from last year. Thus, if you did not spray last year and you had weedy fields this springs, it may take 2 years of spraying to get real good control.

Select one of the weed control programs listed below:

1. Apply 1-1½ lb. Princep 80W in 20-40 gal. of water per acre immediately after last cutting on alfalfa stands established before June 1, or on alfalfa orchard grass stands over 1 year old, to control all of the weeds mentioned above.

2. Apply 1½-2 lb. Karmex 80W in at least 20 gal. of water per acre to new or established seedings of legumes only, after the legume has reached dormancy, to control all of the weeds mentioned above. Do not use on sandy or shaly soils or where soil organic matter is less than 2 percent.

3. For control of quackgrass and chickweed in new or established seedings of legumes only, apply 2-3 lbs. Kerb 50W in at least 20 gal. water per acre after soil temperatures drop to 50 degrees F. or lower and before the ground freezes up.

4. For control of chickweed and downy bromegrass in new or established seedings of legumes only, apply 1 qt. of Chloro IPC in at least 20 gal. of water per acre during November or December, or use 2 qt. of Chloro IPC in January.

If you have fat cattle or need feeders . . .

LIFE on the farm

By DIETER KRIEG

Dad stood by the side of the pick-up truck laughing out loud while listening to our plumber's philosophy.

Never showing awareness of his dry, comical wit, the middle-aged plumber spoke matter-of-factly in a low, gravelly voice which went well with his unshaven face. Mr. Johnson stared out the side window of his truck and took a few draws on his cigarette. You hardly ever saw him without one. Pausing a moment, he let each word come out riding on a cloud of smoke.

"When you have so many things to do that you don't know what to do first, you just go fishing," he said, returning the burning cigarette to his mouth the way George Burns uses a cigar to plug his mouth after the punch line.

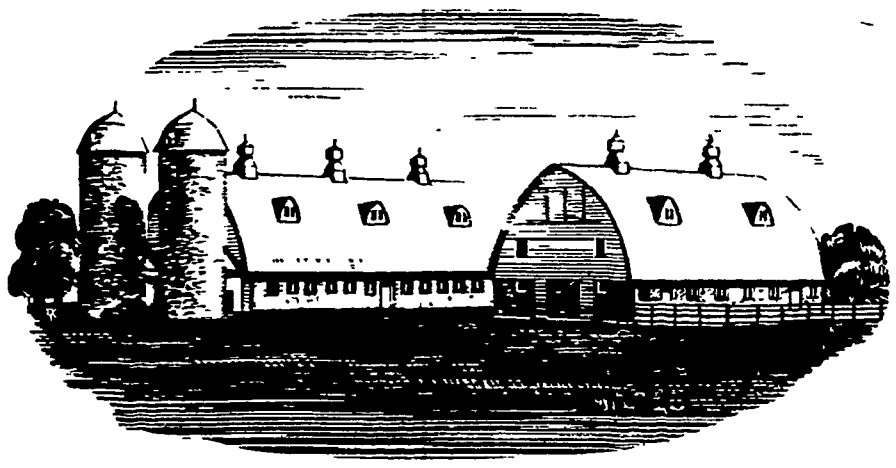
We could have been fishing all summer long had we taken the joke seriously.

Aside from the usual chores involving livestock which can't be postponed, we had a delay in our work schedules because of plumbing problems and a heifer which needed assistance with her calf. We had some hay to haul and two cows to get in for the breeder. They had been let out by mistake after the morning milking.

It was also time to get ready for silo filling, which in itself would take up most of a day — maybe more if a problem arose. One of the silage wagons had a flat tire but that wasn't really a problem. The distributor had to be hauled up to the sop of the silo; equipment had to be cleaned, greased, and oiled; the filler pipe had to be connected; and fields had to be opened.

A section of fence by the woods needed mending; the lawn needed to be cut; and Mom wanted some help picking peaches.

It's a good thing none of us in the family ever went fishing. We never took time to find out what it's like and by this time didn't bother to think much about what we may have been missing.



"Let's get a drink, Marv," I said, leaping from the hay mow to the flat-bed wagon below. We both stood there for a moment, wiping sweat and hay dust from our faces. Working without a shirt, as usual, my entire body itched from the waist up. Walking to the milk house, we massaged our hands, pulling and squeezing fingers which were beginning to feel like nothing more than bones and nerves in spite of the callouses

After a cool refreshing drink, we walked back down to the tractor and wagon. A few tiny thorns and bits of hay remained lodged in the skin and underneath fingernails Although most of the sweat and dust had been wiped off a few minutes ago, the moisture began to ooze out again as soon as we entered the hot barn

Thank God this wagon was empty, and we could take it easy for ten minutes while going out for the next load.

A cloudless sky allowed the sun to penetrate the fields with highest intensity. Without a breeze, each ray stung our bodies with a piercing, burning sensation — intensifying the already uncomfortable feeling of dust clinging to sweaty skin.

We itched and sweated, but that didn't stop us from loading bale after bale of hay. After four straight days of loading and unloading one wagon after another, and carrying milk machines and milk pails twice a day every day, our feet sometimes dragged in the timothy and clover stubbles and our arms felt like they'd fall off.

In spite of the fatigue and discomfort, we kept on going We had to.

If hay is grown on the farm or hauled in from neighbors' fields, the heavy work and tired muscles are as much a part of summer on the farm as the sizzling sun

REPRESSED ANGEL

Lesson for September 7, 1975

Background Scripture: Genesis 1 through 2.

Devotional Reading: Acts 17:22-31.

In 1890 the following article appeared in the local newspaper:

The vicinity of Gap, Lancaster County, is excited over the visit of Rev. David Kaufman, of Indiana, who preaches in his sleep. Mr. Kaufman arrived and went to the house of his brother. Shortly after 6 o'clock he arose in his sleep and began to preach, first in English, then in the German language, and continued to preach until about 9:30. He is now visiting various persons in the neighborhood and will preach every night in his sleep. (The Reading Eagle, Reading, Pa.)

That certainly must have been one of the strangest religious announcements of all time!

Something within

Yet, at the same time it says something significant about the nature of man: often there is something within us more wonderful than we might ever suspect. When we are unconscious, that "something" is often released, like in the case of the rough, profane sailor, who, in a coma, prayed incessantly.

Psychiatrist Viktor Frankl of Vienna says that, rather than hold that "man is a sublimated animal, we can demonstrate that he conceals within himself a repressed angel."

Note that Frankl did not say that only some people conceal within themselves a "repressed angel," but all men! There is something divine in all of us. Even the lowest citizen in our community, the worst criminal in our jail, the most dangerous public enemy has that divine potential within.

This is not some strange, new idea of our own century, but one of the oldest concepts in human history. In the Judiac-Christian tradition we find it begins with the Book of Genesis (which means "beginnings"). The writer tells us: "So God created man in his own image, in the image of God he created him" (1:27).

To be sure, man is a combination. Physically, he is composed of perishable, common material: "Then the Lord God formed man of dust from the ground . . ." (2:7). There is nothing everlasting about man's physical beginning. It is the perfect example of "built-in obsolescence."

The breath of life

But there is more to man's nature than "the dust of the ground." For, says the writer of Genesis, when God took that common dust, he "breathed into his nostrils the breath of life; and man became a living being" (2:7).

Thus it is God's Spirit (his "breath") that gives life to the common perishable body of flesh. Note, once again, that the writer does not say that he breathes his Spirit into only some men, but all men.

In two different, but significant ways, therefore, the writer of Gensis is saying that there is something unique and divine about man. He bears the "image" of his Creator and within him is the divine "breath" of God. In short, there is a divine potential in every man, a likeness to God that links him to his Creator.

Think of it: within you there is the image of God, a "repressed angel" waiting to get out. Why Not?

To Use Proper Livestock Equipment

The handling of livestock correctly is very important in order to reduce stress and avoid injuries. The equipment needed to do this is not costly and in many cases, can be constructed by the farmer himself. I refer to loading chutes, cutting gates, and a catch gate for the individual treatment of animals. All of these are very important to the successful handling of all types of livestock. Also, a sick pen for slow animals is very important because in most cases they should be segregated from the herd or flock. Plans for this equipment are available at Extension Offices throughout the state without charge. Bruises, broken legs, and excitement are not a part of good livestock handling and are costly.

To Consider Pelleted Feed For Hogs

In some recent experiments pelleting increased feed conversion in swine about 8 percent. Some of this may be due to less waste especially with old feeders or with bulky feed. Some other advantages of pelleting are less separation of the ingredients, less dust, and an increase in the rate of gain. Some disadvantages could be higher cost of feed, and a decrease in vitamin content if pelleting is done improperly. Pelleting might be considered by local feeders as a good practice if the cost does not increase the cost more than 8 percent.

To Make Corn Silage

The corn crop looks very good on most farms and silo filling time is approaching. The making of a corn crop into silage is the best way to preserve the most feed nutrients. More milk and beef will be produced per acre from corn when made into silage than to harvest it in any other way. The full dent stage is desired by most cattle feeders and most dairymen as the proper stage of maturity. Protein content can be increased by adding 10 pounds of urea per ton at the silo and cattle feeders might want to add 10 pounds of ground limestone per ton for best results. A stalk of corn with one or two ears in the full dent stage has all of the ingredients for fermenting into good silage providing the storage place is air-tight. Silo gas is a potential danger around all silos and owners should warn their families and employees of this situation for 10 days to two weeks after filling the silo.

To Buy Rugged Healthy Cattle

Many cattle feeders will be on the market in the coming weeks. The old saying, "There's more Money made the Day the Cattle are bought than the Day They are Sold" is still very true and should be kept in mind. Big-framed, fast-growing cattle are preferred in order to make good use of roughages and give fast, efficient gains. The small, quick-maturing cattle cannot be expected to make as rapid gains and are more likely to carry more waste and extra fat when finished. Fresh cattle can be expected to start quicker with less health problems than cattle that have been shipped in and out of several market places before reaching the feedlot.

Silo Filling

Silo filling time is approaching and it might be in order on many farms to give some attention to the interior of the concrete silo. If the surface is rough and pitted, it needs to be "pointed" with cement or other material suggested by the manufacturer. A rough interior surface may mean small air pockets and eventual molding of the silage. Production costs are very high and good care of the silo will provide a place for air-free storage and good quality silage. The proper time to cut corn for silage continues to be in the early dent stage for maximum feed values.

Farm Calendar

Saturday, Sept. 6

York Fair runs through Sept. 13 at York Fairgrounds. Nightly entertainment and agriculture activities.

Kempton Dutch Festival in Kempton through the 7th.

Monday, Sept. 8

Thursday, Sept. 11

Goat club to organize at Schuylkill Cooperative extension office 7:30 p.m.

Tuesday, Sept. 16

Solanco Fair runs through the 20th in Quarryville.

Wednesday, Sept. 17

Penn Ag annual convention at the Gettysburg Sheraton in Gettysburg continues through the 19th.

XL-78

IF YOU DON'T PLANT IT YOU'RE MISSING SOMETHING GREAT

DEKALB XL-78...a great performance leader you won't want to miss. It's bred for yields. XL-78 is a dependable hybrid that offers great standability from rugged, healthy-looking plants. Demonstrates excellent foliar disease resistance. Really does the job...high or low populations. DEKALB XL-78... If you don't plant it, you're missing something great.

XL-54
A top yielder of excellent quality grain on the early side.

XL-75
Outstanding single cross with superior stalk strength, big yields.

As a condition of sale, please note statement of limited warranty and remedy on DEKALB orders and tags

DEKALB®

DEPEND ON DEKALB

"DEKALB" is a registered brand name. Numbers designate hybrids.

Hotspots

Geothermal power may emerge as a vital energy source for future generations It presently furnishes just less then one-tenth of one percent of our energy needs Heat that flows from the earth's core frequently collects in so-called hotspots near the surface When underground water meets the naturally-heated underground rocks in these shallow areas steam or hot water results and geysers like Old Faithful go off Harnessing this energy could produce low-cost electricity Locating the hotspots and transporting the energy from isolated areas to populated regions are the major roadblocks to the widespread use of this energy source

CORN GREW

Corn is a native American crop It first grew in the Andes mountains of South America and then in North America Colonists from Europe found Indians growing corn from the Eastern seaboard to the Rockies, with some plantings covering hundreds of acres

Replaces belly-slung mowers

The Yazoo Rider

The Yazoo Rider is already well known to commercial cutters. They bought twice as many of them this year as they did the year before.

It's a completely industrial-standard machine. Yet it costs about half as much as the tractors they've been using, with their belly-slung blades and huge, unwieldy gearcases.

Why are we telling residential owners about it?

Because the Yazoo Rider actually costs less than well-known "homeowner" brands of belly-slung tractor mowers.

In residential use it should last a lifetime.

Try these with a belly-slung mower

- UNDER FENCES • 12" TURNING RADIUS
- UNDER SHRUBS • TO WATERS EDGE

Comes with 76", 60", 48", 42" or 36" cut. Other attachments available

Farm outlook

(Continued from Page 1)

tomatoes offset higher prices for wheat, milk, hogs, corn, soybeans, Upland cotton, and eggs during the month ended August 15.

According to the USDA bulletin: Wheat was up 56 cents to $3.89 per bushel; milk up 28 cents to $8.47 per cwt.; hogs were up $1.90 to $56.00 per cwt.; corn was up 23 cents to $2.95 per bu.; and soybeans were up 52 cents to $5.80 per bu.

Prices paid by farmers for goods and services increased by a point since last month and by 14 points since last year at this time. In terms of percentages, they are one half of one percent and eight percent, respectively.

The August 15 Index of Prices Received by Pennsylvania farmers was virtually unchanged from mid-July, according to the Crop Reporting Service.

To be continued next week

Higher prices for corn, wheat, barley, hay, hogs, slaughter cows, milk, milk cows, and eggs were offset by lower prices for oats, apples, cattle, sheep and lambs, and most poultry products. The index was three percent above a year earlier.

Last fall, when I heard the news from the midwest that supplies of seed corn were going to be short, I knew prices would start climbing I asked my Stanford dealer about it, and he told me that the smartest thing for me to do was to order my NK corn early He told me that the people at Stanford shared my concern about higher prices — and they did something about it They authorized my dealer to give me price protection on my early NK order That meant that if the price of seed corn went up, I would pay the lower early-order price That sounded like more than a fair deal to me, so I ordered early And you know what? The price went up later, saving me $2 50 a bag

That's one of the reasons I'm going back to my Stanford-NK dealer now

Another reason is the big yield potential of Northrup-King hybrids NK corn took more than 80 first-place N C G A state championships in the last six years

To me, that's convincing proof that NK hybrids are exactly what we need to get those high-profit yields from our corn acreage

My choice this year is NK's PX76 — the next great hybrid for my area For two years, it has been the most consistent high yielder in NK trials across the mid-Atlantic region You might need a mid-season corn on your farm, like PX 50A for grain or silage — or PX 20, an early corn with excellent standability, early spring vigor and fast dry-down

On top of a high-yielding NK corn hybrid, the kind of help I need now is in straight cash savings So I'm ordering my NK corn early again — this time to cash in on Stanford's big new early-order, early-pay discount deal

I like doing business with people who are always there with the kind of help I can really use That's why I'm staying with my Stanford dealer and NK corn

New, higher
EARLY ORDER, EARLY PAY DEAL
Here's how to get bigger savings!
- Order before October 15, and save a buck a bag
- Order 10 bags or more for quantity discount

Horses are a family affair

By Melissa Piper

For the John Christensen family of Manheim R4, raising, breeding and showing horses has become a family affair. The Christensen's own the Silver Meadow Horse Farm off the Elizabethtown Rd., and along with giving riding instruction in both English and Western, the family breed and show registered Arabian horses.

Not natives to the County, the family moved to the Lancaster area three years ago coming from West Virginia. After some months of looking for a farm suited for raising horses, the family settled at their present location and began a family enterprise.

Mrs. Christensen, an accomplished equestrinne, has been teaching riding for the past three years, instructing students in English and Western along with some side-saddle techniques.

At the present she has some 30 students who learn in either groups or semi-private lessons. "We were surprised at the number of adults that have requested lessons," she noted.

"Many husband and wife teams come to learn as it is a recreation they can do together."

Along with the regular instruction, Mrs. Christensen stresses health care and grooming techniques. "People can learn to ride but so often they neglect the health care and grooming that is so essential," she commented.

"We try to give an appreciation of horses from all angles and not only riding."

Mr. Christensen, who works in business, helps with the showing and breeding portions of the program. Both he and his wife are members of the Arabian Horse Registry, the Pa. Arabian Horse Association, the International Arabian Horse Association and several local Arabian Horse clubs. Mr. Christensen is also a member of the Pa. Army Reserves.

The Christensen's have two children, Karen 15, and Eric 11. Karen is currently learning to ride side-saddle and Eric is leaning the fine points of English riding.

Two of the Christensen's registered Arabians won several outstanding awards in the past month. Silver Phoenicia, a grey three-year old filly and Silver Empress her two-year old half-sister each won their Eastern Futurity classes at the Eastern All-Arabian Horse Show held recently in Devon. This marked the second year in a row that the two horses had won the same honor.

Silver Empress also scored highly at the Delaware Arabian Show where she won the two-year old filly class and was judged as the junior champion filly and the reserve champion mare.

Silver Meadow Pixy, a registered half-Arabian pony mare, also owned by the Christensen's placed highly at the region 16 championships held in conjunction with the Delaware All-Arabian Show.

Along with the many awards that the Christensen's Arabians have won in breed shows, the family has also done well at the Keystone International Livestock Exposition held annually in Harrisburg.

Silver Meadow horses have done well the past two years at the Pa. show and the Christensen's hope to repeat their performance at this year's upcoming show.

While so many horse farms have taken an interest in just having a great quantity of stock for show, the Christensens have kept their stock at a minimum keeping only the best in quality.

(Continued on Page 16)

Eric Christensen, 11, saddles - up his pony Pixie. Young Eric is learning the find points of riding from his mother, Mrs. John Christensen.

Berks Co. 4-Hers show winning hogs

James Shrawder, a 4-Her from Kempton R2, exhibited the grand champion hog at the Berks County 4-H round-up held recently in Leesport.

The 4-Her's hog weighed in at 230 lbs. and sold to Hatfield Packing Co. for $1.00 per pound. James is the son of Mr. and Mrs. F. Lee Shrawder.

Exhibiting the reserve grand champion of the show was Wendy Yoder, daughter of Mr. and Mrs. Samuel Yoder, Shoemakersville.

Wendy's crossbred hog sold for $.85 per pound to Yoder's meat Market in Shoemakersville. The young lady is a member of the Northern Berks 4-H Dairy and Swine Club.

Some 5529 pounds of pork sold following the show with a total selling value recorded at $3577.38. The average weight of the hogs was 204.78 pounds.

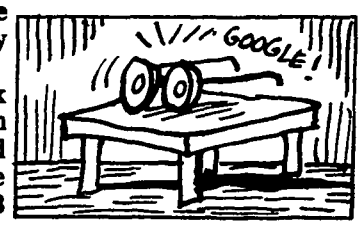
Meg Turner, Kempton R2, was named the senior champion fitter with James Shrawder, Kempton R2 selected as the reserve fitter.

In the junior division, Wendy Yoder placed first with Scott Turn, Kempton R2 placing second.

Meg Turn also received the first place senior showman award with Fred Yoder, Shoemakersville, receiving reserve honors.

In the junior division Wendy Yoder placed first with Scott Turn receiving second place honors.

Terry Shearer, farm manager for Pigeon Hill Farms, was the judge for the round-up.



Goggles are believed to derive their name from the old English term for squinting.

Riding side-saddle is becoming popular and one of the first in the area to try it is Karen Christensen, 15. Karen enjoys riding and showing the family's horses.

Mr. and Mrs. John Christensen, Manheim R2, are shown with one of their award winning Arabian fillys. The couple is planning to start a horse club in the near future.

Horses

(Continued from Page 15).

"We feel that quality is more important than quantity," related Mrs. Christensen.

"We'd rather have better horses then just a lot of lower quality animals," Mr. Christensen added.

Although successful at shows, the Christensen's also enjoy teaching others about horses and their riding. Giving a respect and appreciation of horses to others has been one of their main goals. And to carry out their thoughts, the Christensen's are preparing to start a Horse Club for those people of the area wno enjoy riding and showing or just like horses. The first meeting will be held Sept. 16 at 7:30 p.m. at the Silver Meadow farm near Elizabethtown.

Southeast dairy show

(Continued from Page 19)

the county group competition.

The Master Fitter of the contest was John Marsh.

JERSEY

Junior Calf

Kent Heffner, Pine Grove.

Intermediate Calf

1. Bruce Andrien, Jr., West Chester; 2. Patricia Ann Jenkins, Toughkenamon.

Senior Calf

Eileen Kurtz, Pine Grove.

Junior Yearling

Kathie Kay Rhein, Pine Grove.

Senior Yearling

(No blue ribbons).

Two Year Olds

1. Denise K. Andrien, 2. Catherine E. Wollaston, Toughkenamon.

3 and 4 Year Olds

1. Karen Waltermyer, Collegeville; 2. Bruce Andrien, Jr.

Aged Cow

Catherine E. Wollaston.

The Champions

Karen Waltermyer's three and a half year old daughter of Nancys Sleeping Advancer was chosen as grand and senior champion, beating Bruce Andrien's Top-O-Hill Rosebay Hopeless daughter which was named to the reserve spot in both cases.

Miss Waltermyer's junior yearling, a one and a half year old daughter of Tristram Kelly, was named junior champion. Kathy Rhein showed the reserve animal.

County Groups

1. Chester, 2. Montgomery, 3. Schuylkill.

Master Fitters

Kathleen Kopistocki, Royersford; Cynthia Waltermyer, Collegeville; Karen Waltermyer, Catherine E. Wollaston, Denise Andrien, Bruce Heller, and Patricia Lynn Dreisback, Hamburg.

Master Showmen

Bruce Andrien, Jr., West Chester; Catherine Wollaston, Toughkenamon; Holly Ann Scheib, Phoenixville; Denise Andrien, West Chester; Terry Lee Rhein, Pine Grove; and Cynthia Waltermyer, Collegeville.

AYRSHIRE

Junior Calf

1. Kennard Henley III, Cochranville.

Senior Calf

1. Judith Ann Young, West Grove; 2. Steven Mack, Pen Argyl.

Junior Yearling

1. William Henley, Cochranville; 2. Judith Ann Young, West Grove.

Two Year Old

1. Edward A. Kulp, Pottstown.

3 and 4 Year Olds

1. Sharon Lynne Henley, Cochranville.

Aged Cow

Judith Ann Young, West Grove.

The Champions

Grand and senior champion banners went to Sharon Lynn Henley who showed a 3½ year old daughter of Oak Ridge Flashy Kellogg. The reserve senior champion was Edward Kulp's two-year old, a daughter of River Run League Leader.

The junior champion, a junior calf bred, shown, and owned by Kennard Henley, was also picked to be reserve grand champion. She is a daughter of the Kellogg bull. Bill Henley showed the reserve junior champion.

In county group competition, the recognition went to Chester County.

Master Fitters and Showmen were: Kennard, William, and Sharon Henley, with William the only one to win both titles.

Young Farmers meet

The Manheim Young Farmers Association recently met in the Manheim vocational agriculture classroom. Following a short business meeting, the evening's topic and panel members were introduced by James Kettering.

The meeting's topic was Corn Grain: How should I store it? Members on the panel were: Ray Shenk of Shenk's Farm Service, Lititz - drying high moisture grains and drying systems; Nevin Gish of Agway - treating grains with organic acids; and Bill McLain of Penn-Jersey Harvestor - storing grain in sealed storage.

Each panel member gave opening remarks about their systems and products. Following these comments, the panel members responded to questions from the twenty farmers present.

The following is some of the information brought up at the meeting by questions and answers.

When corn is dried the maximum temperature for animal feed is 140 degrees, commercial use: 130 degrees, and for seed: 110 degrees. Dried corn can be held in a bin for one year when it is dried to 13 percent and for five years when it is dried to 11 percent. There are basically six ways to dry corn which include: layer drying in the bin, bin drying with stirring augers, bin drying with stirring augers and floor augers, non-circulating batch dryers, recirculating batch dryers and continuous flow dryers. Proper cleaning of the grain helps reduce the amount of fuel required, and heat spots are less of a problem. Costs for fuel per bushel is about 8-9 cents for the recirculating batch dryer; 12-13 cents per bushel for the bin with stirrers, and 20-24 cents for layer drying. These figures do not include costs for depreciation for bins, dryers and other costs.

The second method was using Chemstore II. Chemstore II is an organic acid which contains 20 percent acetic acid and 80 percent propreonic acid. The acid kills bacteria and fungi and preserves the corn at field conditions. The corn is usually at 22 percent to 28 percent when it is treated and moisture barriers maybe needed to prevent more moisture entering the grain. This corn can be stored anywhere except in metal bins for up to one year. When the farmer contracts with Agway; the cost for acid, equipment, and labor is about 25 cents per bushel plus the cost for the storage area. The farmer can recieve a guarantee for the treatment. There appears to be an advantage in gains when using acid threated corn as compared to dried corn. One point to remember is that the corn must be fed to animals, because there is no market for the treated corn.

The third method is storing the high moisture corn in a sealed storage. Pound for pound of dry matter the high moisture corn has a higher feed efficiency than dried corn. The main reason for this is that the storing process does not seem to change the availability of the nutrients as much as drying. The first year cost per bushel is about $2.60, but this is reduced when it is divided by the life of the structure. This cost would be about $2,000 for 10,000 bu plus the costs of electricity, blowing and others. The major problem is the high investment with this system when you first start.

There is no one best system for everyone, so look into all of the possibilities and then decide.

Lawn Care

In answer to the question concerning the merits of broadcasting lawn seed over the top of an established lawn, I'd have to answer in the negative; to do this is simply putting seed into a very poor seedbed with excess competition. However, if the lawn area was "de-thatched" in which case some loose soil would be brought to the surface and all old lawn clippings removed, then there would be a good chance of the new seeds getting started. Early September is an excellent time to de-thatch a lawn and to either make a new seeding or renovate an old lawn. De-thatching machines are available that will dig up the old decayed clippings, which should be removed. Some extra attention to the lawn in early September (lime, fertilizer, and weed killing) will contribute to a better

Beacon Silage Pre-Serv* used on your corn silage will pay for itself three times over.

And that's not all!

Beacon Silage Pre-Serv is convenient.

You can harvest and treat corn silage at 60-65% moisture. Apply it wet or dry, with an applicator, or just sprinkled over each load.

You save labor because there's less lumping and bridging in the silo.

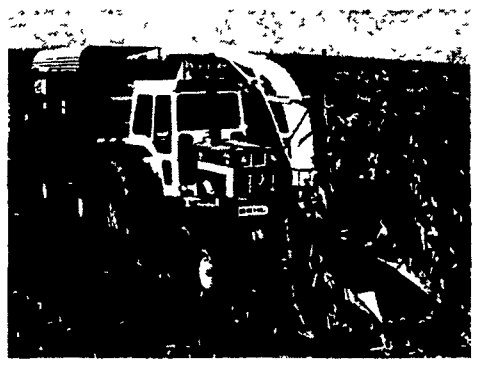
It's economical.

A ton of silage requires only ½ pound of dry Pre-Serv, or 1 pound of liquid Pre-Serv.

It's profitable!

Pre-Serv prevents heat build-up, controls oxidation, and greatly reduces spoilage and shrinkage.

You'll get up to 30% more feeding value—essential protein, carbohydrates and vitamins per ton.



Provides more nutrients per ton of corn silage.

Milk haulers - the link betwee

They're on the go no matter what, facing big resp

By Dieter Krieg

What was it they used to say about the U.S. Mail? I believe it was something about neither hail, snow, rain, hell, or high water stopping service.

Well, the Post Office has pretty much abandoned that motto. If the catchy, complimentary phrase holds true about anyone's service these days, then the nation's milk haulers are undoubtedly on this select list. They work on Sundays and holidays. Their trucks roll, skid, and slide on ice-covered roads during the winter. Trailers and tractors bog down in muddy farm lanes during a summer downpour. Drivers wait in drab snack rooms for their tankers to be unloaded while their wives and children celebrate Christmas without them.

A blizzard howling fiercely may keep everyone else home, but milk truck drivers must brave the dangers and coax their rigs up and down treacherous hills and around sharp turns. While most dairymen can milk in comfort on even the coldest day, the milk hauler wrestles with stiff milk hoses and icy snow chains. A wrong move on a slick surface and he ends up in a ditch or jack-knifed across the highway. He leaves early in the morning, and if things go wrong won't return until after dark. Sometimes, during very bad weather, he's stranded 50 miles away from home for over a day or two at a time.

Nothing stops the milk truck except an actual physical block such as an impassable snow drift or a sea of mud two feet deep. Even during the 1974 truckers' strike, the bulk milk haulers excluded themselves and faced bricks, bullets, and rocks.

The mail may not have to move. But the milk does. And a milk truck driver knows it.

One of the men who faces all of the responsibilities and dangers of hauling milk is William R. Maule of Quarryville RD3. I accompanied him this past Labor Day on one of his routes — from start to finish. Like many a dairyman, his day begins at 5:00 a.m. If bad roads are expected, he starts earlier.

Maule works for Lloyd C. Welk, who has a fleet of milk trucks at his garage in Georgetown. Arriving there at 5:15 a.m., Maule raises the garage door, turns on the lights and taps each of the 18 tires on the truck with a hammer to make sure they're inflated to satisfactory pressure.

Climbing into the cab, the big diesel engine under the hood snaps to life as the ignition key is turned. The cab vibrates gently in accompaniment to the six cylinders beating out a low, steady rhythm. Maule touches a few switches on the dash and the rig "sneezes" loudly several times as the air brakes are released. The rumble under the hood increases and you can feel the strain as the 68,000 pound tractor and trailer inches forward.

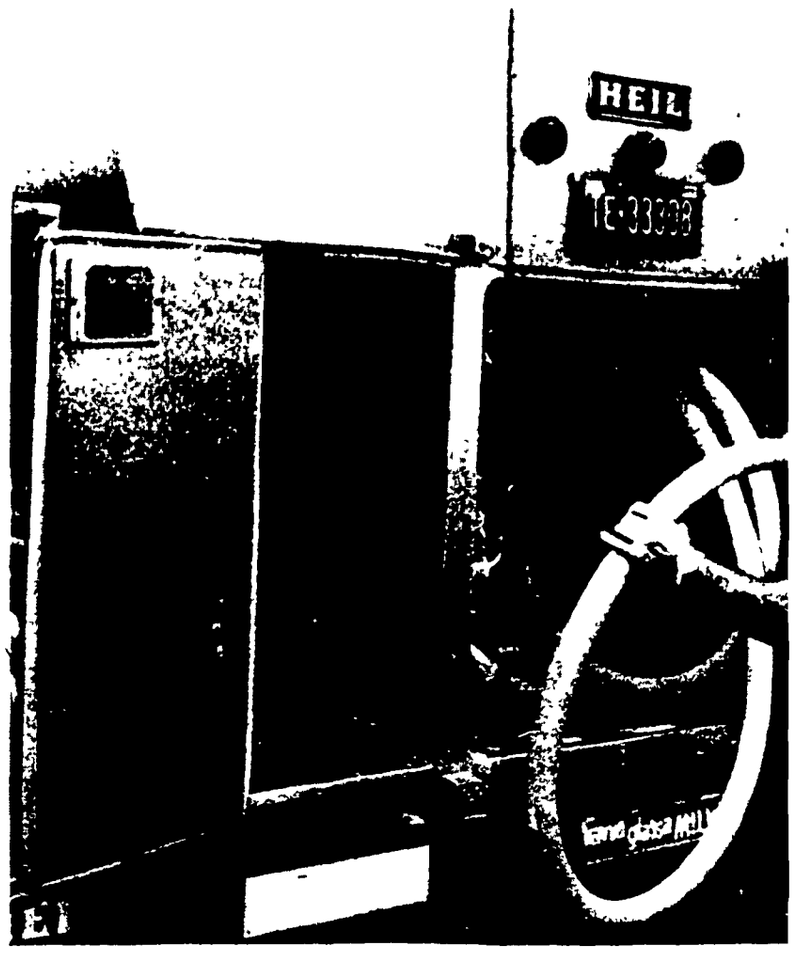
It's slow going at first. He starts out in second and systematically shifts his way through a dozen other speed ranges. After four years of driving a tractor and trailer, Maule says the gears fall into place themselves. His eyes never leave the road — his hand knows exactly where each gear is and he shifts as though it's an automatic reflex.

A number of farmers don't have their barn lights on yet as Maule pilots the rig, carrying 36,600 pounds of milk, along narrow country roads toward US Route 30. Black smoke pours from the chrome-topped stack and pounding pistons crack the silence of morning. The smoke and noise intensify at every climb and nearly vanish on the downward slope. The ride is somewhat bouncy.

Our destination is the A&P milk receiving plant at Fort Washington, along the Pennsylvania Turnpike. The freshness of early morning still hangs in the air when we arrive at 6:50 a.m. An orange-red sun shines through the morning clouds and bounces its light off the shiny stainless steel tanker. Maule shifts into reverse and backs his rig into one of three unloading bays. The tractor sneezes several times. One part of the trip has been completed.

The first procedures prior to unloading include washing the doors, vents, and milk outlets. Then the pump assembly and gaskets are removed — everything is washed in a nearby tub. The receiver on duty at the plant takes a sample of milk from each of the tanker's two compartments. Maule walks into a small office and adds up all of his weight slips with an adding machine, comparing results with the tabulations which had made all along the route the previous day.

It doesn't take very long to unload the more than 18 tons of milk Maule had on board. The dairy's pump, with a capacity of 180 gallons per minute, can suck the trailer dry in less than half an hour. The milk passes through a meter and into one of several storage silos. There's a tolerance of 100 pounds either way between what the meter says was on board and what a driver's records show. Maule points out that the tolerance level isn't exactly the fairest since it applies to any truck, regardless of its size. On a percentage basis it follows then that small



William Maule, a former dairyman, has spent f years hauling milk and says he enjoys t responsibilities. Most of all, he appreciates t opportunity to talk with farmers.

Southeast 4-H dairy show had

ALLENTOWN — The 30th Annual Southeast District 4-H Dairy Show was held August 29 at the Allentown Fairgrounds, Allentown, Pennsylvania, with 189 animals exhibited by 137 4-H Club members from nine Southeastern Pennsylvania counties including Berks, Bucks, Chester, Lackawanna, Lehigh, Monroe, Montgomery, Northampton, and Schuylkill. Among the animals exhibited were 89 Holstein, 19 Brown Swiss, 14 Milking Shorthorn, 40 Jerseys, 11 Ayrshires, and 16 Guernseys.

Judges for the show were Lloyd Ebersole of Sire Power, Inc., Tunkhannock, PA for Holsteins, and John Marchezak, Guernsey breeder, from Washington County for Ayrshires, Milking Shorthorn, Brown Swiss, Jerseys and Guernseys.

During the course of the show, exhibitors who did an outstanding job of fitting and showing their animals were given Master Fitter or Master Showman awards. No champions were selected in these categories. Judges for these fitting and showman awards were Duane Duncan, Cumberland County Extension Agent; Charles Gale, Columbia County Extension Agent; and Carol Schurman of Waynesboro, PA.

Glenn Shirk, show manager and Chester County Extension Agent, estimated that 400 spectators were present during the day. Shirk also noted that the blue ribbon animals in each class are eligible to compete in the Pennsylvania Dairy Show which will be held Monday, September 22 at the Farm Show Building in Harrisburg. At this Junior Dairy Show the Southeast District winners will compete against winners from six other district shows in the state.

This event was sponsored by the Cooperative Extension Offices of the nine counties and the Cooperative Extension Service of The Pennsylvania State University.

Following is a list of blue ribbon winners in the show, which this year was dedicated to Edward G. Leidig, former president and general manager of the Allentown Fairgrounds. Order of names does not necessarily correspond with order of actual placing.

HOLSTEINS

Junior Calf

Susan Seidel, Richland; Alan S. Mason, Nottingham; Susan Pepple, Oxford; Kenneth Fabian, Nazareth; Steven Shaw, Oley; Dana Geyer, Harleysville.

Intermediate Calf

Keith Buch, Fleetwood; Kevin Sattazahn, Womelsdorf; David Schuler, Fleetwood; Wendy Shaw, Oley; Beverly Hershey, Cochranville. Tim Alderfer, Harleysville; Patty Seneko, Harleysville.

Senior Calf

Christine Worthington, Doylestown; Susan Pepple, Oxford; Glenn Stoltzfuss, Morgantown; Brian Carl Dietrich, New Tripoli. Tim Alderfer, Harleysville.

Junior Yearling

Ruth Shuler, Fleetwood; Robin Dietrich, New Tripoli; Janice Buckman, Perkasie; Joseph Gehringer, Bally.

Senior Yearling

Kenneth Craig Worthington, Doylestown; Susan Seidel, Richland; Lori Gruver, Pipersville.

Two Year Old

Helen Seidel, Richland; Joanne Gail Belke, Newtown; Tina Acker, Chester Springs; W. Douglas Seipt, Easton.

3 and 4 Year Olds

Scott Miller, Hamburg; Karen Sattazahn, Womelsdorf; Wendy Shaw, Oley; Warren Buckman III, Perkasie; W. Douglas Seipt, Easton; Marilyn Seipt, Lansdale.

Aged Cow

Susan Seidel, Richland; Curtis Dietrich, New Tripoli; David Wurster, Ottsville; Eileen Kurtz, Pine Grove.

The Champions

Grand Champion and Senior Champion was a four-year old daughter of Irvington Fury Dandy, owned and shown by Wendy Shaw of Oley. The animal was bred by Bryncoed Farms, Divisions of Ludens, Inc. Chester Springs.

Reserve Grand and Reserve Senior Champ honors went to Tina Acker's two year old daughter of Paclamar Capsule. The animal was bred by her father, Samuel Acker, of Chester Springs.

The Junior Champion was Curly-Hill Ivan Jiffy, bred, owned, and shown by Kenneth Craig Worthington of Doylestown. The two year old heifer is a daughter of Peters-Farm ABC Ivanhoe.

Junior reserve champion honors went to Susan Seidel, Richland. She showed a senior yearling (two years old) daughter of Mas Swan Jupiter Champion.

Sandy Evans, Chester Springs, and Jeffrey Staner, Berwyn, were among the 137 4-H Club members who competed in the S. E. Penna. 4-H Dairy Show, August 29 at the Allentown Fair Grounds. The two cows, both owned by Jeff, were named Grand Champion and Reserve Grand Champion Guernseys of the show. Sandy exhibited a Holstein heifer, and was recently crowned as the Chester County Dairy Princess.

between farmer and consumer

:ing big responsibilities and considerable danger

liam Maule, a former dairyman, has spent four hauling milk and says he enjoys the nsibilities. Most of all, he appreciates the rtunity to talk with farmers.

loads are allowed to differ considerably more than large shipments.

This particular plant, which processes and supplies milk for much of the mid-Atlantic region, had two 30,000 gallon silos and six which held half that much. Last month 574 tankers came here to unload milk.

The processing and bottling facilities offer the visitor an insight as to why there's a significant price difference between what the farmer receives and what milk sells for in the store. One part of the building resembled the engine room of an ocean liner, with huge motors, ducts, and valves filling most of the area. The noise was like that of an engine room too.

In the bottling area itself, thousands of paper cartons and plastic containers paraded with military precision from one end of the line to the other. The place was noisy enough to be an airport. And with all the moving belts, most of them full with milk containers, it all looked like a mass of busy freeway interchanges. Automobiles should move along so smoothly.

It was now getting close to 8:00 a.m. Maule's tanker had three water lines hooked to it as automatic washers cleaned the inside thoroughly. Meanwhile, Maule scrubbed the exterior of the truck from one end to the other.

The ride back to western Lancaster County was a little bouncier than the eastbound trip. The empty trailer made quite a difference.

The pick-up route included stops stretching along the River Hills from Silver Spring, Columbia, Conestoga, Rawlinsville to Chestnut Level. The entire route from Georgetown to Georgetown was 172 miles long. Maule drives it every other day. On days in between he has a second route which measures 126 miles in length. He has one regular day off per week, plus one Sunday per month.

Maule, who has been trucking milk for four years, says he has "always been interested in hauling milk" and likes the responsibility and challenge involved in being in command of a $50,000 rig. A former dairyman, he remarked he didn't want to leave the farm entirely and likes the "association with other people."

There's more to picking up milk and hauling it to town than meets the eye. Drivers must pass a test concerning their knowledge of milk and milk handling, and be thoroughly familiar with proper procedures for measuring, taking samples, perishability, and sanitation. There is actually a prescribed way for entering the milk room. This includes turning on the lights, raising the lids to the tank, washing your hands, sniffing the milk for odor, agitating the milk for at least five minutes, taking a sample, and more.

Several forms are filled out at each stop. Each dairyman is familiar with the pick-up slips because he himself receives one every time the truck takes his milk. There is also a "manifest" on which each farm's amount of milk, the date of pick-up, and destination is recorded.

Amounts are totalled at each stop to let the driver know how much is on board. A third item of paperwork is the "quality control sheet" on which the driver records the time of pickup and temperature of the milk. It corresponds with the sample which he takes along for the laboratory.

Among the tests which may be run on each sample are: standard plate count, direct microscopic count and thermoduric count — all of them for bacteria; antibiotic test, freezing point determination, sediment test, somatic cell count, and butterfat test.

Maule arrived at his last stop at about 4:00 p.m. which is a little behind schedule. That was due to having stopped briefly for breakfast earlier in the day, he explained. Lunch was just a pair of small cakes bought at a country store.

Married, and the father of three children, Maule has no regrets about having gone into milk hauling as a career. He takes his responsibilities seriously and enjoys it. But there are days when it's not much fun, and even downright dangerous.

Last year during the truckers' strike, Maule recollected, he had bricks thrown at him and his truck. Occasionally he was confronted with roadblocks. "When you tell them you have a highly perishable item they usually let you through," he explained.

Trucking milk on a holiday (as it must be) can also be discouraging. Maule explains:

"Many dairies close on holidays and that means we get diverted to other plants which are usually much farther away. That can tie you up all day. It's nothing to go to a large dairy on a holiday and have 100 trucks waiting to be unloaded. Also, dairies want milk to carry them through holidays, which means we have to deliver more. Then we make two trips to the dairy in one day — amounting to 1½ days' work. And, of course, sometimes the roads are bad or our equipment breaks down."

A 12-hour work day is pretty much par for the course for Maule and others like him. And it doesn't take much to make it much longer than that.

BROWN SWISS

Junior Calf

1. Dennis Daubert, Pine Grove.

Senior Calf

1. Dean Daubert, Pine Grove; 2. Dennis Daubert.

Junior Yearling

1. Daryl Urmy, Coopersburg; 2. Anne Daubert, Pine Grove.

Senior Yearling

1. Daryl Urmy, Coopersburg.

Two Year Olds

1. Dennis Daubert; 2. Stephen Nolan, Birchrunville.

3 and 4 Year Olds

1. Dean Daubert; 2. David Nolan, Birchrunville.

Aged Cow

1. Daryl Urmy.

The Champions

Dennis Daubert had the grand champion and senior champion with his entry, Wind Mill Bridget, a two year old daughter of Norvic Lilason's Beautician. Following him in the reserve spot in both contests was Daryl Urmy's 5½ year old cow whose name also happened to be Bridget and who shared the same sire.

Junior champion and reserve junior champion banners went to Daryl Urmy and Dean Daubert, respectively.

County Groups

1. Schuylkill, 2. Lehigh, 3. Chester.

Master Fitters and Showmen

Daryl Urmy, Coopersburg; David Nolan, Birchrunville; Dennis Daubert, Pine Grove; Bryan Urmy, Coopersburg; Dean Daubert, Pine Grove; Scott Hauseman, Oley.

GUERNSEY

Junior Calf

1. Holly Ann Scheib, Phoenixville; 2. Denise Andrien, West Chester; 3. Jeffrey Staner, Berwyn.

Intermediate Calf

1. Gary Barton, Berwyn; 2. Jeffrey Welsh, Malvern.

Senior Calf

1. Douglas Soliday, Bethel; 2. Holly Ann Scheib, Phoenixville.

Junior Yearling

1. Denise K. Andrien, West Chester.

Senior Yearling

1. Jeffrey Staner, Berwyn.

Two Year Olds

1. Jeffrey Staner.

3 and 4 Year Olds

(No blue ribbons).

Aged Cows

(No blue ribbons).

The Champions

Jeffrey Staner's Kelsos Winning Flash daughter, a three year old, was chosen as senior and grand champion. The reserve senior champ slot remained vacant. The reserve grand champion was also shown by Staner. The senior yearling was sired by Lyreme May Rose Prince, and had earlier been given the junior champion banner. Reserve junior champion honors went to Gary Barton's Kelsos Winning Flash daughter.

The only county group to be listed was that from Chester.

Master Fitters and Master Showmen were: Holly Ann Scheib, Denise K. Andrien, Jeffrey Staner and Jeffrey Smith.

MILKING SHORTHORN

Junior Calf

Wendy Yoder, Shoemakersville.

Intermediate Calf

Samuel Yoder, Shoemakersville.

Senior Calf

John D. Marsh, Sadsburyville.

Junior Yearling

Wendy Yoder.

Senior Yearling

1. Nedra Yoder, Shoemakersville; 2. Frederick Yoder, Shoemakersville.

Two Year Olds

1. Nedra Yoder, 2. Samuel Yoder.

3 and 4 Year Olds

1. Samuel Yoder.

Aged Cow

1. Nedra Yoder.

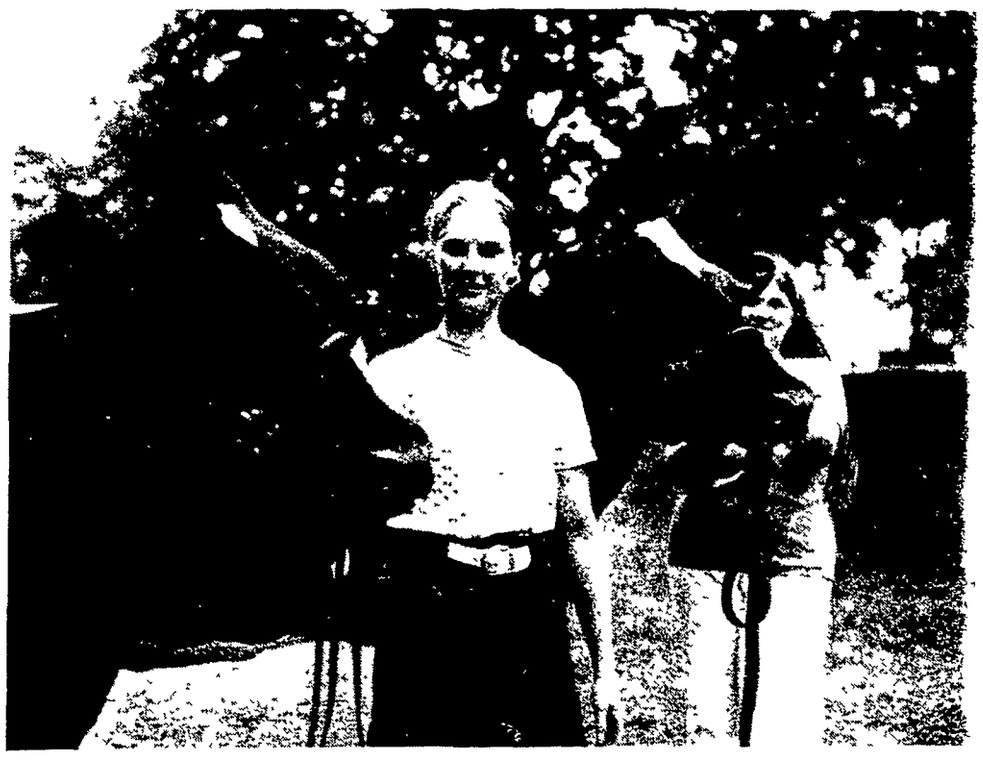
The Champions

Nedra Yoder's 5½ year old daughter of Pinesedge Echo King doubled as the grand and senior champion. The reserve spot for both of those contests was filled by a two year old daughter of the same bull, with Miss Yoder again at the halter.

In the junior champion contest, it was Wendy Yoder first, followed by John Marsh.

Berks County took it all in

(Continued on Page 16)



Tina Acker (left), Chester Springs, and Wendy Shaw (right), formerly from Chester Springs but now residing in Berks County, were among the top winners at the S.E. Penna. 4-H Dairy Show, held August 29 at the Allentown Fair Grounds. Tina's 2 year old cow won Reserve Grand Champion Holsteins honors, and Wendy's cow was judged Grand Champion Holstein.

M. T. Kauffman (left) company vice-president for Hoffman Seeds presents the Hoffman Hall of Fame award to James M. Noll, Mt. Joy R1. The award was presented at a meeting of the sales representative at the Farm and Home Center recently.

Noll named to Hall of Fame

LANCASTER, PA. - James M. Noll, Mount Joy, R1, has been named as a recipient of the Hall of Fame Award by Hoffman Seeds, Inc.

The presentation by the Landisville, PA seed company was made at the Lancaster County Farm and Home Center recently, during the firm's annual sales conference. Noll is a Lancaster County sales representative for Hoffman.

The presentation was made by M.T. Kauffman, company vice president, for "outstanding contributions in sales and service" during the past year.

Of the more than 500 company seed men in ten states, only 24 have met the qualifications to receive this coveted Award. The recipient receives an engraved plaque and his photograph is hung with those of other winners in the special Hall of Fame display at company headquarters in Landisville, PA.

ASC committee decides need for emergency loans

Authority to determine the need for and to implement the Emergency Livestock Feed Program has been delegated to State and County Agricultural Stabilization and Conservation (ASC) Committees, according to Paul H. Keeney, Chairman of Berks County ASC Committee.

Under this program, Commodity Credit Corporation (CCC) owned feed grains can be sold to eligible livestock owners at reduced prices. The assistance is to prevent widespread liquidation or undue culling of livestock because of flood, drought, hurricane, tornado, earthquake, disease, insect infestation or other catastrophe.

In fiscal year 1974, 4.8 million hundredweight of feed grains were distributed under this program to eligible applicants in 156 counties.

Effective immediately with new disasters and upon concurrence of the State ASC Committee, eligibility for assistance will be determined on an individual basis by county ASC committees without prior approval from Washington.

Assistance under the program is limited to those livestock owners who because of a natural disaster have suffered a substantial loss in livestock feed normally produced on the farm, are required to make feed purchases in quantities larger than normal and are unable to obtain through normal channels of trade without undue financial hardship sufficient feed for their livestock.

The only feed grain available at this time for distribution under the Livestock Feed Program is oats of which 26.8 million bushels are earmarked for this use.

Eastern York youths win scholarship

Four York County youths were recently awarded the Carroll F. Thompson Scholarship awards for college work. All FFA members, the youths have chosen careers within the field of agriculture. Recipients of the award are as follows:

Jeffrey Keeney, son of Mr. and Mrs. Clyde Keeney, 2826 Viree Rd, York. A 1974 graduate of York Vo-tech, the youth is currently attending the York Campus of Penn State majoring in horticulture.

Douglas Linebaugh, son of Mr. and Mrs. Walter Linebaugh, 734 Cleveland Ave., York. Doug is a 1974 graduate of York Vo-tech and is presently attending the York Campus of Penn State majoring in horticulture.

Bruce Miller, son of Mr. and Mrs. Dale Miller, Red Lion R1. A 1974 graduate of Red Lion High School, the youth is currently attending Penn State and is majoring in food science.

Harry Ray Harrison, son of Mr. and Mrs. George Harrison, Wrightsville R1. Harry will be attending the National School for Meat Cutting in Toledo, Ohio. He is a 1975 graduate of Red Lion High School.

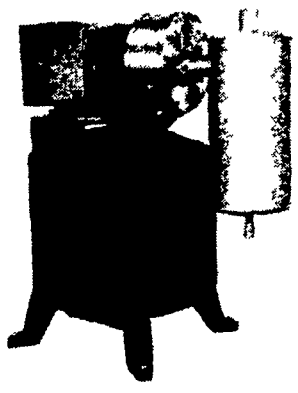
Zero - PIONEER OF FARM BULK MILK COOLERS

DEC INTERNATIONAL
BOU-MATIC®
marks a world of difference in dairy equipment...
The way it's engineered. The way it's matched together. That's the total Bou-Matic equipment difference. And, it adds up to more profitable milking. For you. • Because, after all the quality we build into every part, every component . . . we want to make sure each can perform up to its full potential. • So, we conscientiously apply the proven Bou-Matic Principles, which assure precise balance between proper vacuum, proper inflations and proper pulsation. That way no one area can limit any other. • Makes a world of difference between Bou-Matic and second best. Right down the line. Ask us to prove it.
Professional milking systems for the milking professional
WE CAN OFFER YOU THESE PRINCIPLES IN ANY OF THE FOLLOWING EQUIPMENT:
• PROFESSIONAL INSTALLATION AND SERVICE
• PIPELINE SYSTEMS
• AUTOMATED HERRINGBONES
• AUTOMATED CAROUSELS
• AUTOMATED POLYGONS
• CROWDING GATES
• STIMULATION STALLS
• MILKERS
• AUTOMATIC DETACHERS
• VACUUM PUMPS
• BULK TANKS
• PIPELINE WASHERS
• PRE-COOLERS
• REPLACEMENT PARTS, BOU-MATIC INSTALLATIONS
• AUTOMATED SIDE OPENING STALLS



See the new style Bou-Matic Turbine VacQMer VACUUM PUMP
Ideal for Milking & Washing
Extremely quiet
• no oilers • no vanes • no bearings
• no wicks • no belts • no tank filter
• no pulleys
• no pollution of oil fumes
Just one moving part produces steady quiet pressure or vacuum by water action alone.

Butz defends modern farming

Editor's Note: The following is the major portion of a speech given by U.S. Secretary of Agriculture Earl Butz before the Allied Chemical Liquid Fertilizer Division late last month.

MIAMI — One of my jobs as a boy was swatting potatobugs. I'd walk between the rows swinging a broad wooden paddle, knocking the bugs off the leaves.

I also remember walking behind a horse-drawn cultivator, or pitching hay with a long handled fork. So do countless other Americans. Such labor was not unique. In fact until only recently it was common.

I remember this whenever I hear someone attacking modern methods of farming.

The loudest critics of scientific and mechanized agriculture are those who never had to drag themselves out of bed on the third morning of haying season with hands so sore they could hardly hold a dinner fork, let alone a pitchfork.

But like it or not, that was what you had to do; it was the only way to get the hay put up. There were no hydraulic bale wagons nor self-propelled field choppers.

After a couple of weeks your hands got tough and your back muscles grew a lot stronger. But having calloused hands and a strong back didn't change the fact that your individual productivity was pretty low. You had to put in a lot of hours for the amount of hay you put up, the amount of cotton you chopped, or the rows of sugar beets you thinned.

At the turn of the last century there were 30 million Americans on farms, many of them making only the barest of subsistence. Their production was not all that high, in spite of the large amounts of labor expended. The tillage tools were not all that much different than those of George Washington or Jethro Tull. Commercial fertilizers were still rich men's toys, and it was many years before the advent of chemical pesticides. The width of a horse's haunches still set the distance between corn rows.

Each farmer produced only enough food for himself and 6 other people. About 40 percent of the population had to be tied to the land in order to feed themselves and the remaining 60 percent, and then not very well.

Today, 5 percent of the population feed us all, while the remaining 95 percent are freed to pursue improvements in medicine, communications, transportation, education or any other endeavor of their choosing.

In the 75 years since 1900, American farming has gone through the greatest revolution in productivity ever witnessed. Today's American farm worker feeds himself and 55 others — and those farmers applying the latest production techniques on economically sized units have output levels many times greater.

Anthropologists reckon that before the beginnings of agriculture about 8000 years ago the world probably supported no more than 5 to 10 million people. By A.D. 1, the number may have been up to 200 to 400 million people.

In 1750, the human population hit somewhere around 800 million.

Then the accelerating numbers started to build. By the end of the next hundred years, in 1850, human numbers reached 1.3 billion.

By 1950, 2.5 billion people lived on Earth.

Now just a short 25 years later, there are about 3.9 billion people on our planet. By the year 2000, if we continue to multiply at present rates, there will be between 6.5 to 7.0 billion people living on Earth.

That means in the next two-and-a-half decades we must learn how to feed as many more people as we have learned to feed since the dawn of history. Even now, we aren't feeding the 3.9 billion nearly as well as we should.

So what does this all mean to those who say we should give up our modern agricultural techniques, that we should go back to the "good old days," that we should turn back to animal power, stoop labor, and pre-industrial farming techniques to feed our people?

It means they're blowing smoke out their ears, that's what it means.

There is no way we can revert to old-style farming without creating mass starvation, mass pestilence and social devastation across the globe.

These are harsh realities, spoken bluntly, but we had better face them. Those of us who know farming — who know the business of production, who know the odds of battling weather, who know the threat of plant and animal diseases — had better start telling the facts loudly and plainly.

Every new regulation that hampers agricultural production — every new bit of legislation that interferes with the individual farmer's management decisions, every new economic control that erodes his profit incentive — drives another nail into the collective coffin of mankind.

The only farmers who can produce the amount of agricultural plenty the world must have by the next century are those who are free. They must be unrestricted in order to profitably apply their knowledge and skills to the land they farm.

Collective control of agriculture doesn't work. Centralized State management of agriculture doesn't work. Only a free economic system of price incentives to farmers will coax much more food production from this Earth of ours — no matter how much we wish to have a bigger pie to share, or how many more people there will be to feed.

There is no greater folly than to try increasing

FREY FREE STALL
LIFETIME FREE STALL HOUSING

Cut bedding costs 75 per cent, reduce labor for barn cleaning and cow washing; reduce teat and udder injury to the minimum — house your milking herd in free stall housing. Each cow provided a stall for loafing. She won't be stepped on, the rear curb forces manure out into alley for mechanical cleaning or washing. A few minutes twice a day cleans the stalls and curbs, bedding lasts almost forever if your stalls fit the cows. Popular sizes are 6'6", 7' and 7'6". Size 'em by breed.

Our free stall partition may be mounted on wooden head boards or we make a steel divider. Set the legs in 8 to 10" concrete curbs to hold and retain bedding Stall floor can be soil, sand or gravel Bedding — straw, sawdust, peanut hulls, ground corn cobs, etc. Should be installed with paved alley surface 8 feet wide for mechanical cleaning or washing

- 8 Models all steel welded farm and feedlot gates
- 2 Models all steel welded head catch gate

Butz defends modern farming

(Continued from Page 21)

agricultural production by mandate from the political arena. This is one of the main reasons why the Soviet Union, with more than twice the land mass of the United States and only about 42 million more people, can't feed itself. Twice in the last three years the Russians have turned to the greatest market-incentive agriculture man has ever known — the United States of America — to get sizeable quantities of bread for their people.

If our farmers hadn't been free to produce, that grain wouldn't be here. If our farmers had been throttled back, as some politicians howled for last spring, the world would be less stable today. Hungry people are desperate people. They cause governments to topple and dreams of peace to crash.

Meeting the demanding new challenge of feeding a much larger world population will require changes in economic policies and agricultural research. It will require changes in education, and better dissemination of scientific knowledge. It will require more capital expenditures for food production; more available credit to farmers in lesser developed countries; and most of all, better incentives for farmers wherever they may be.

There can be no adequate supplies of food produced in any country that insists of clinging to a so-called "cheap food" policy. It won't work. Farmers are always going to need some sort of incentives if they are going to increase food production.

There's yet another factor that puts added pressure on the drive for more food: the rising level of affluence in almost every nation. As economies develop — and make no doubt about it, they are developing — people in those economies want and demand better diets as the first step toward affluence.

This crucial fact is changing the world. The dissemination of new and better ways of living will continue strengthening the demand for more and better foods. This, along with sheer population growth, will strain the agricultural production capacity of every farm in the world by the year 2000. Food transportation and distribution systems will also be severely strained.

In the end analysis, there is no answer unless we bring our population growth under control. But in the interim period, the next 20 to 30 years, increased agricultural production will be the key to how well men fare.

We had better recognize this. When critics of modern agriculture snipe at us, we had better answer them with the facts. Farmers, farm suppliers, food processers and marketers, and agricultural researchers had all better start speaking with clearer voices. The general public must learn what is at stake when they hear the young radical or a jaded politician talk about the need to go more slowly in applying scientific techniques to agriculture.

I think there are moments when all of us would like to excape to the bucolic memory of the untouched countryside, the pastoral setting of the early-day shepherd, or the built-in closeness of the pioneer family. These are pleasant dreams to contemplate.

The pleasant memory of a Golden past, leaving out the hard facts, is not reality. The untouched countryside, or the small fields of a sturdy yeoman, will not feed today's growing population. The unfertilized field will not put bread in the mouths of very many children; it will not support a free industrial society with good jobs and a choice of opportunity for all people.

Today the pressure is on, but we have a choice. Mankind can either lie down and give up, or we can use all of our productive skills and knowledge to work for a better future.

Too many of those who would choose to give up — at least in their daydreams of the simpler life — have never shucked corn by hand or controlled plant pests with a broad wooden paddle. They have never seen the parasite-ridden animals that produce the meat of the developing world, or the spindly plants that produce the grain, or looked into the eyes of a child whose view is clouded by malnutrition and dimmed by protein starvation.

Only the creative minds of productive men, free to explore new ideas and new possibilities — unhampered by rigid government controls — can work to clear those eyes. Only a farmer who is free to respond to individual incentives can supply the abundance of food that can remove the clouds from that child's future.

Only applied technology stemming from rational thought and scientific inquiry can give mankind a hope for the future. Collectivism, daydreaming and pulling in our necks like a turtle cannot.

Pennsylvania leads mushroom production

HARRISBURG — Pennsylvania led all states in the production of mushrooms, according to the Pennsylvania Crop Reporting Service.

Pennsylvania's record total was 178.6 million pounds, of which 59.8 million pounds were sold for fresh market and 119.1 million pounds were sold for processing.

The value of sales for the fresh market mushrooms for the 1974-75 season was $33.395 million compared to $23.829 million for the 1973-74 season. The value of sales for the processed mushrooms for the 1974-75 season was $45.933 million compared to $39.930 million for the 1973-74 season.

During the 1974-75 crop year, 62,116,000 square feet were utilized for mushroom production compared to 59,498,000 square feet the previous crop year. Intentions for the 1975-76 crop year are 61,930,000 square feet. This is a decrease of 186,000 square feet from this crop year.

In the United States production of mushrooms reached a record high of 299.1 million pounds for the year ending June 30, 1975. This represents an increase of seven percent over the 279.5 million pounds produced last year, and continued the trend of constant production increases since the survey began in 1966.

Growers in the United States received $147.2 million for the 1974-75 crop, up 19 percent from the 1973-74 value of $123.4 million.

An estimated 110.9 million square feet of bed and tray area were used in the production of mushrooms during the year, three percent over 1973-74.

Car For Lovers

Romeo, the Shakespearean character— do you know his last name?

How about Romeo, the car—know the first name?

The last name of Romeo, the lover, was Montague (Juliet's last name was Capulet).

The first name of Romeo, the car, is Alfa And in Italian both Romeos are said with

the accent on the middle syllable—"e," which is pronounced as "ay." The Alfa Romeo that many Americans will be seeing these days is the Alfetta, a new car being manufactured in Italy for the American market Because of its simple but elegant styling in the classic sedan or sporty GT version, durable construction, easy handling and good mileage (25 miles per gallon on the highway), it's a smart choice for families who want a quality foreign car that's within their price range

So if you ever ask yourself, as Juliet did, "What's in a name?" you may now be able to answer, "A great deal!"

New Idea's Superpickers

1-row Superpicker... low cost way to harvest your corn

Hour after hour, acre after acre, you'll get non-stop plug-free picking in all kinds of corn with a 1-row Superpicker.

The big, hungry gathering unit picks clean, even in down and tangled corn. Flexi-Finger presser wheels on the long, 6-roll husking bed deliver clean, whole ears to your wagon even in the heaviest yields.

Before you buy, take a good look at this Superpicker . . . it combines the capacity you want with the non-stop performance you need for fast, clean, profitable corn harvesting.

MILK—A—LONG FARM TELLS OF USING SILO KING ON CORN SILAGE

Marian and Sam Long on far left with their cow Morrisville Kennedy Bess Bea (V.G. 86)

TESTIMONIAL

"I filled a 10 x 40 silo half full of corn silage because I had run out of silage. I started chopping on August 18, 1975 and decided to give SILO KING a try. Some of the kernels were dented but most of them were in the milk stage.

The cows like this silage! When we open the barn doors we have to get out of the way because they all try to come in at the same time. They didn't do this until we started to feed the SILO KING treated corn silage. For corn silage that was chopped that green, it had a real good smell. There was no foul odor at all.

In my mind there is no substitute for palatable, high quality roughage when it comes to making milk more economically. We as farmers cannot afford to lose what we have grown, and I feel that SILO KING helps us to save the quality of the roughages we grow."

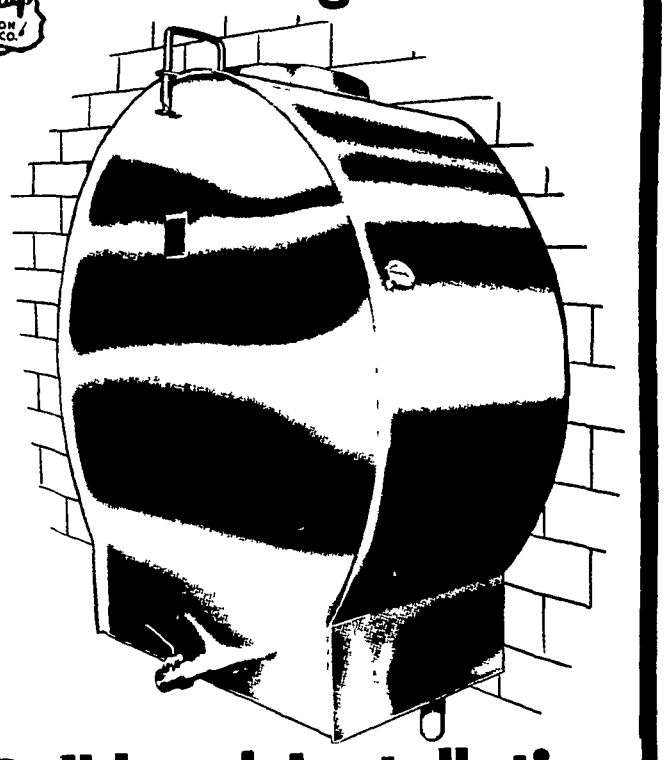
Farm Milk Cooling Tanks



SPLIT REFRIGERATION SYSTEM

All Model D5-940, D5-1000, D5-1240, D5-1500, D5-2000, D5-2450 and D5-3000 Girton Ambassadors are designed with a divided cold plate. Your dealer can install one large condensing unit or two small units. Using two will provide you with emergency cooling if one fails. When production is low you may be able to cool your milk with just one unit. If you present tank has a good unit you can save money by using it and one new unit. Whatever your decision, your Ambassador will cool your milk cheaper - .4 Kilowatt hours per 100 lbs. of milk.

"OAK"

7H147 ROUND OAK ROCKMAN EX (91) 1563897

USDA Sire Summary (May, 1975)
93 Dtrs. (68 Herds)
Pred. Diff. '74 +794M +.02 per. +32F
Repeatability 82 per.; Dollar Difference +$55

Oak stems from the same cow family that produced Elevation and Elation. He is siring smooth, stylish cattle that possess outstanding udders. The udders are well attached and milk out easily. Oak can be considered a rump improver, and with a slight set to the leg can be used on those cows with too straight a leg. Oak is a Butterfat Test improver.

The Pa. All American Dairy show is rapidly approaching. We will be there with all the latest information. Please do stop by our booth and visit with us.

High moisture grain.

Farmers and feeders have known for a long time that 'soft' (high moisture) grain was good feed. Their dairy and meat animals showed it. However, 'soft' grain could only be fed for a short time each year. Because it wouldn't keep.

Then A.O. Smith introduced the oxygen-limiting Harvestore System. And for 25 years there's been a practical way to store and feed high moisture grains.

And there's nearly 25 years of corporate, university, feedlot, experiment station, and on-the-farm research and testing to prove the effectiveness of the System. (Experiments have been conducted using high moisture corn, barley, and grain sorghum at these colleges and universities, among others.)

Iowa State University	University of Illinois	Michigan State University	University of Minnesota
University of Florida	University of Arizona	Montana State University	Mississippi State University
Purdue University	University of Wisconsin	North Dakota State University	South Dakota State University
Texas A&M University	Oklahoma State University		

The results? High moisture grain, processed through the Harvestore System, has consistently proven to be superior to dry grain.

What it does.

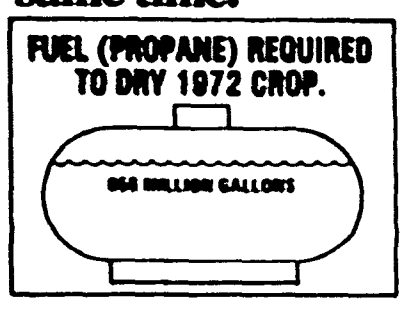
The Harvestore System limits the amount of oxygen that can come into contact with the moist grain. Consequently, oxidation and spoilage are drastically reduced, and the grain maintains the most possible feed value until fed.

How it works.

The oxygen trapped inside the structure during filling is used up during the mild fermentation and is converted into carbon dioxide.

When all oxygen is gone fermentation ceases, the carbon dioxide remains. Organisms that cause spoilage cannot survive in this atmosphere. The grain is protected, extremely palatable, instantly available.

There is a pressing demand for more corn* and the spector of ever-decreasing supplies of fossil fuels....at the same time.

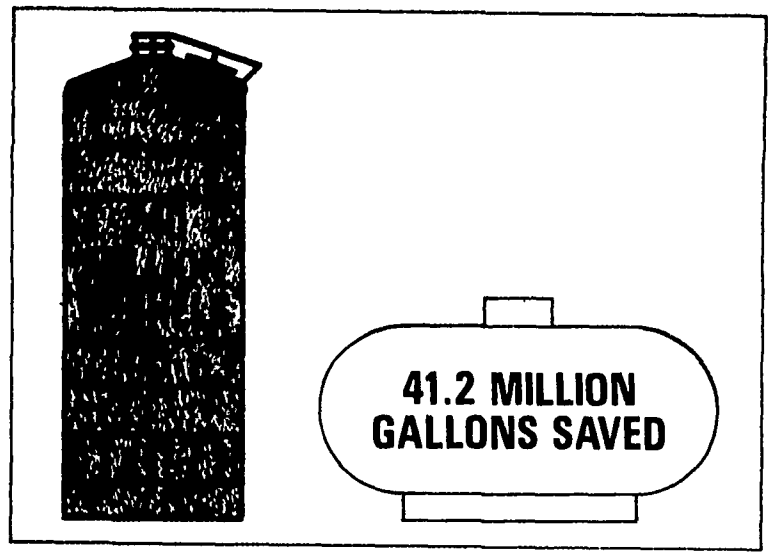


Don't forget...
The fuel you buy to dry grain is an expense and gone forever.

The cost of the Harvestore System is a depreciable investment and works for you year after year.

Today....

American farmers and feeders using the Harvestore System, annually save approximately 41.2 million gallons of critical fossil fuel (propane).



There are over 45,000 Harvestore structures now in use, of which 23,000 are used for storage of high moisture grains. Over 240 million bushels of high moisture grains are processed through these structures each year.

Enough to....

conserve sufficient fuel to heat the entire public school system for a major midwestern city....for over 12 years.

(Kansas City, Mo., 48 buildings, 2 branch libraries, a greenhouse and warehouse).

Or operate the city bus system for nearly ...

(29,000 miles a day, 4 7 mpg on diesel fuel, 3 61 mpg propane equivalent)

The Harvestore System.

Proved practical and profitable for the storage and feeding of high moisture grains.

- Early harvest saves grain
- Direct field to storage
- No drying
- No shrink
- No grinding or mixing
- Virtually no spoilage
- Totally automated feeding

AGWAY

Announcing a new calf feeding program from Agway

introducing two new milk replacers– AGWAY BLUE LABEL and AGWAY RED LABEL

–and two complete calf feeds to promote health, growth, and early freshening

College research proves it! Under proper management, you can grow calves just as fast and keep mortality down when you feed them on milk replacers. And you can count on cutting your costs at the same time!

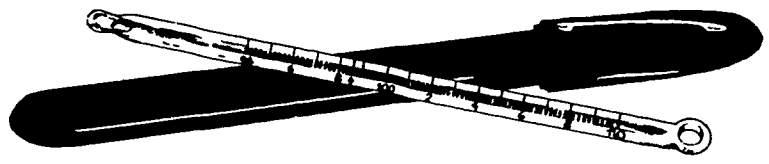
It takes about $5.00 worth of Agway Red Label to bring a calf to weaning. Compare that with the cost of feeding whole milk—you'll invest about three times that amount.

Agway Blue Label supplies all the essential nutrients with 75% of the protein from milk products. It's highly fortified with vitamins and antibiotics to fight off disease and help calves grow. It's easily digestible and readily soluble. It's the top of the Agway line.

Agway Red Label for maximum economy. Fifty percent of the protein is derived from whole milk. It's well fortified with antibiotics and has the same high vitamin content as Agway Blue.

To keep them growing. Two new complete (no forage needed) Agway calf rations—TCR I and TCR II. Both are pelleted for palatability and freshness. Both made from top-quality ingredients to promote good growth and feed efficiency. Both offer balanced nutrition. And both are self-fed, saving labor.

Send more milk to market. Start your calves on Agway Blue Label or Agway Red Label milk replacer and keep them coming on strong with Agway TCR I and TCR II. Check Agway for details.



FREE! Professional 5" veterinary calf thermometer with ring and plastic case. Yours with purchase of three or more bags of Agway Blue Label or Agway Red Label. See your local Agway store or representative. Offer expires Nov. 8, 1975.

THOUGHT FOR THE WEEK

Experience is one thing you can't get on the easy payment plan.

Mrs. Robert Groff

A dairyman's wife who enjoys cooking

by Mrs. Charles McSparran Farm Feature Writer

Mrs. Robert C. (Mildred) Groff, Quarryville R3, through her love for animals and her willingness to help with the farm work, is always on hand for milking and raises pups for her own project. She is a busy homemaker and has many interests at home but probably the thing she enjoys most is cooking and entertaining. She has always been active in her church and other community organizations.

Millie, the daughter of Mrs. Martin and the late Mr. Gish, Rheems, grew up on their farm where they finished steers and raised chickens. Her mother had a baked goods stall at The Market Basket on College Ave., Elizabethtown, once a week where she sold all kinds of her homemade baked goods and candy. Millie helped at market, baked cakes and made cream puffs and her mother made the pies. She also helped with the farm work. They always had a dog and Mildred was in the 4-H Baby Beef Club. To this day she does a lot of baking and still likes animals. She was graduated from Elizabethtown High School then worked several years at the frozen food locker plant in Elizabethtown. There she learned well the cuts of meat and likes to wrap their meat for the freezer. It was at Penn State when she was judging 4-H baby beef that she met Bob who was judging 4-H dairy animals.

Robert is the son of Mr. and Mrs. Charles Groff, Strasburg. His father worked for Pennsylvania Power & Light Company and was a painter. However, his grandfather was a farmer and Bob spent a lot of time on his farm. Through this experience he decided to go into farming.

Groffs started farming 24 years ago at Denver, Lancaster County, and farmed there four years before buying Groffdale Farm which is in Strasburg, Eden and Providence Townships. Their 160 acre farm, two farms to be exact, is located on Camargo Road.

Mr. and Mrs. Groff and their children are very proud of their 180 Holstein herd. They have an all registered herd of 70 cows, 20 bred heifers and 90 younger heifers and bulls. They raise all of their animals and most of the bulls are sold for breeding stock. They have had their animals classified ever since they started farming and have had several classified excellent. Their herd will be classified again this month. Nine years ago Bob and three other farmers formed a syndicate and bought a cow, "Don Auger Dottie Blossom", in Connecticut. From this dam they sold a six-month old bull, "Seventh Grand Supreme VG 87", to the American Breeders Service. At the present time he is ABS's top rated bull with a predicted difference of 1724 Milk. Although all of the children have showed their 4-H animals, Bob has done very little showing. He had the grand champion Holstein cow at the Southern Lancaster County Community Fair in 1971. Groffs are in DHIA and their rolling herd average is 15,000 pounds of milk and 550 pounds of fat.

In addition to their 160 acres, some of which is woodland and pasture, they rent 50 acres hearby and bale about 50 acres of hay on the halves for other neighbors. Three years ago they built a 60 stanchion cow barn with six box stalls and put up two Harvestore silos. They have a pipeline milker. They grow 80 acres of corn and 80 of alfalfa and mixed hay. They put corn silage in their concrete silo, high moisture corn in one Harvestore and haylage and ryelage in the other Harvestore then top it with corn silage.

Groffs have never had hired help. Mildred has always helped with the milking, mornings and evenings, feeds the calves and helps Robert keep the farm records. All of their children help with the farm work. In addition to farming Robert has been selling Pioneer seed corn for 18 years. His territory covers Strasburg, Providence and part of Eden Township. Millie helps him with the bookwork and selling of it also.

Mrs. Groff decided to go in the dog business eight years ago. She bought a male and a female Keeshond, Prince and Queenie. She says, "Keeshond dogs like people. They're friendly dogs." Queenie has had several litters of pups in the past six years. There were eight pups in the last litter in April. When Mrs. Groff has pups for sale, she puts an ad in the local paper and they're gone in a couple days.

Groffs have four daughters and one son. All of the girls were graduated from Lampeter-Strasburg High School. Carol took a business course. She is a secretary for Red Rose Farm Service, Quarryville. She married John Best and they reside at Holtwood R.D. Carol, being the oldest, did a lot of farm work when she was at home.

Joyce took the Academic course in high school and received the Home Economics award when she graduated. She was the recipient of the Pennsylvania Farm Women's scholarship for four years. She was recently graduated from Messiah College where she majored in Home Economics. She wants to teach school. At present she works at the Willow Valley Restaurant and lives at home. She helps to milk if needed and helps with preparing meals at home.

Sharon, after graduating from high school, became a secretary for H. W. Nauman & Sons, New Danville. She married Dale Enck and they have a one-year old daughter. They live on Groffs' adjoining farm. Sharon and Joyce were in the high school chorus and both play the piano and accordion. They play accordion duets and piano-accordion duets.

Suzanne, "Sue", took the business course in high school and was graduated this past June. While in school she was active in Future Business Leaders of America. She was president of it in the high school and was regional secretary also. She likes to take shorthand. She received the Home Economics award when she graduated. She and her mother do the milking while her father works in the fields in the summer. She does the drawings and the registrations for the dairy animals and types letters for her parents. She wants to get a secretarial position.

Charles, "Chuck", is in tenth grade. He has been in Garden Spot Chapter FFA and won the Star Green Hand award. He also won the Burrows Scholar award for being the outstanding student in the ninth grade for agriculture in the classroom. Chuck is his dad's right hand man, working in the fields, tends to the young stock and sometimes helps to milk.

The whole family has been active in 4-H, starting with Bob being in the Dairy Club and Mildred in the Baby Beef Club. Later Bob served as a leader for the Lancaster County Holstein Dairy Club for 12 years and Mildred was a leader 8 years for the 4-H Sewing Club that met at Martin Mylin Junior High School. All of the children were in the 4-H Dairy Club and showed at the Southern Lancaster County Fair. Carol and Joyce showed at the All-American Show in the Farm Show Building, Harrisburg. Both girls were in the Dairy Club 8 years. Joyce was also in the Sewing Club 8 years. Sharon was in the Sewing Club 4 years and the Dairy Club 6 years and showed at the District Dairy Show. Suzanne was in the Sewing and the Dairy Clubs for 7 years. She exhibited clothing at the Southern Lancaster Co. Community Fair one year and received first prizes on three outfits. She also exhibited at West Lampeter Community Fair and received prizes. Chuck was in the Dairy Club 4 years.

All of the Groffs are members of the Mechanic Grove Church of the Brethren. Mrs. Groff taught the kindergarten Sunday School class for 9 years. She and Robert are Deacons. It is their duty to visit 12 families. They go a step forward and invite the 12 families for a meal once a year. Millie says, "I like cooking, I always have. I like to entertain and it's a fun night." About 40 or more people attended the last time. It was held in the garage and they played volleyball and had a devotional time. In line with serving food, Millie has helped serve wedding receptions at church. She was secretary of their Sunday School class group. Joyce taught at the Daily Vacation Bible School several years and Suzanne helped this year. Sharon used to play the piano for the youth group in the evening and plays now for the chancel choir.

Mrs. Groff was a charter member of Farm Women Society 31 when it organized five years ago. They have about 28 members now. She served on the Program

[Continued on Page 40]

A portion of Groffs' dairy barn and silos provide the setting for Mildred and her Keeshond female, Queenie, that has presented her with many adorable pups.

Mrs. Groff, seated on a Groff heirloom chair, is holding a prized lusterware vase that belonged to her grandmother. The table also came from the Groffs.

Rabbit Teriyaki Anyone?

I'm a great collector of cookbooks not just any cookbook found on the shelves you know, but the ones which seem a little adventureous. Well, I thought I'd seen them all from "Tincan Cookery" to "Potluck Adventures" but the "Favorite International Rabbit Cookbook" was sure a surprise to me!

The cookbook was sent to our office by a public relations firm in Lancaster who was promoting the cookbook for the Favorite Manufacturing Co. in the County I almost put the book down in disbelief when I read that the author was Janet Rabitt (it's true) but I decided to read on anyway.

The booklet is a 16-page mini-cookbook which includes international recipes for rabbit and rabbit alone It is published by the Favorite Company, a leading manufacturer of rabbit equipment.

The author herself along with her husband raises rabbits and with a flare for international cookery put together the book - which can be purchased at $1.00 per copy from the Favorite Manufacturing Company in New Holland, PA.

Although I've been told that rabbit is low in cholestrol and high in protein, I think I'll sit this one out. The cookbook is quite interesting however and gives not only recipes but ways of cutting up the meat. And if you don't have a taste for Japan's Rabbit Teriyaki why not try the English Rabbit and Kidney pie?

Mrs. Robert C. Groff, Quarryville R3, delights in serving these delectable pumpkin drop cookies.

A dairyman's

(Continued from Page 38)

committee and is on the Ways and Means committee this year.

Robert has been a Director of the Southern Lancaster Co. Community Fair Association for six years, having served two years as vice-president and president in 1973. He is a member of Lancaster County, the Pennsylvania and the National Holstein-Friesian Association and the Inter-State Milk Producers where he ships milk. He has been a member of the Pennsylvania Farmers Association for about 15 years and was a Director on the Lancaster County Board. Mrs. Groff was on the Womens Committee, being secretary for two years. Robert served on the Lancaster County Extension Board for three three-year terms and was on the Farmers Home Administration Board. They approve loans to farmers in Lancaster County.

Mrs. Groff likes antiques. They have several pieces of furniture which have been handed down from both families and some that were in the house when they moved there. Bob's father has refinished some of them. Mrs. Groff prizes a lusterware vase which belonged to her grandmother Fridy. She made beautiful drapes for her living room which add to the antique decor of the deep window sills, the chair rail and the furniture. Part of Groffs' house was built in 1770. Later an addition was built on and the house was remodelled in 1938. Mrs. Groff, with the help of her brother-in-law, designed and he remodelled the kitchen about ten years ago.

Mrs. Groff learned to sew from her mother. She made a lot of clothes for the girls until they learned to sew for themselves. She doesn't have as much time to sew now but still makes some of her own clothes.

Millie has a garden and does most of the work in it. She grows a full line of vegetables, also cantaloupes and pumpkins. She also has quite a few flowers that are in full bloom around her house. This season of the year finds her replenishing her freezer with all the fresh, young and tender vegetables and canning peaches and some of the vegetables. In the winter they have one of their Holstein bulls butchered and buy a pig and put them in the freezer. What better way to enjoy the fruits of your labors? For anyone who enjoys cooking and entertaining as Millie does it isn't hard to find something to make a meal with plenty of food handy. Here are a few of her family favorites.

SEVEN-DAY SWEET PICKLES

7 pounds medium-sized cucumbers
water to cover
1 quart vinegar
8 cups sugar
2 teaspoons salt
2 tablespoons mixed pickle spices

Wash cucumbers and cover them with boiling water. Let stand 24 hours and drain.

Repeat each day for 4 days, using fresh water each time.

On the fifth day, cut cucumbers in ¼ inch rings.

Combine vinegar, sugar, salt and spices. Bring liquid to a boil and pour over sliced cucumbers. Let stand 24 hours.

Drain syrup and bring to a boil. Pour over cucumbers.

Repeat on the sixth day.

On the last day, drain off the syrup again and bring to a boil. Add cucumber slices and bring to a boiling point.

Pack into hot jars and seal.

PUMPKIN DROP COOKIES

½ cup butter
1 cup sugar
1 cup cooked and drained pumpkin
1 cup nuts
1 teaspoon vanilla
1 teaspoon soda
1 teaspoon baking powder
1 teaspoon cinnamon
1 teaspoon salt
2 cups flour
1 tablespoon butterscotch pudding

Add ½ cup brown sugar if sweeter cookies are desired.

Cream butter, add sugar and mix well. Add next four ingredients and mix after each addition. Combine dry ingredients and add a portion at a time.

Drop on a cookie sheet and bake at 350 degrees for 10 minutes.

NOTE: Before baking, cinnamon and sugar may be placed on top of the cookies, or the cookies may be iced when cooled, also good plain. These are nice soft cookies.

BAKED CORN

1 quart stewed corn
1 egg
1 tablespoon flour
1 cup water
1 teaspoon salt

Mix together egg, flour and water. Add this mixture to the stewed corn and stir. Place in a greased baking dish and cover with bread crumbs and 1 tablespoon butter.

Bake at 350 degrees for 30 minutes.

RHUBARB SAUCE

2 quarts rhubarb
1 quart water
1 tablespoon tapioca

Let boil until soft.

Add:
2 cups sugar. Let come to a boil.
Add 2 boxes strawberry gelatin.

MEAT LOAF WITH ZESTY TOPPING

2 eggs
¾ cup milk
1 cup dry bread crumbs
2 teaspoons salt
⅛ teaspoon pepper
¼ cup grated carrot
2 pounds ground beef

Beat eggs in mixing bowl. Stir in remaining ingredients and mix thoroughly.

Pack in 5 x 9 inch loaf pan or shape into a loaf about that size in a baking pan. Spread with this topping:

¼ cup catsup
2 tablespoons prepared mustard
3 tablespoons brown sugar

Mix and spread over meat loaf. Bake at 300 degrees for 1½ to 1¾ hours. The low temperature helps to keep the loaf from shrinking and the top from browning.

Sept. is better breakfast month

September is an annual re-dedication period towards starting the day and the rest of your life - properly, by consuming a better breakfast. Dairy Council Inc., Southampton, Pa., reminds everyone that September is Better Breakfast Month. They suggest "breaking the fast" each morning with approximately one-fourth of the body's daily needs of protein, calories, vitamins, and minerals.

Perhaps the most important meal of the day, scientific research clearly shows that an adequate breakfast is essential for energy and maximum efficiency during the morning hours, both mentally and physically. Muscle fatigue, a slower brain reaction and physical response result when the body is "short-changed."

A good breakfast does not necessarily mean eating the stereotyped breakfast foods of the past. According to Dairy Council nutritionists, a quality breakfast can be any combination of foods, either solid or liquid, which supply the vitamins, minerals, protein, carbohydrates and fats that the body requires. Choose your foods from the Basic Four Food Groups using variety and moderation as guides. Milk and dairy products, meat, fish, and poultry, fruits and vegetables, and breads and cereals make up the four groups.

Children, teenagers and young adults are frequently guilty of skipping or eating an inadequate breakfast. Yet, their caloric and energy demands are among the highest.

Ida Risser

Waiting in doctors and dentist's offices is for the birds. I don't want any part of it but occassionally it is necessary for myself or other members of the family.

Many times I've wished I could take a basket of lima beans along and hull them while I wait. Other folks have mentioned bringing their ironing or mending and completing it while they await their turn.

Soft music may help wile away the time but a television blaring in a small room certainly "turns me off." Appointments help to save time but don't expect too much as often one rushed to an office only to cool your heels later.

Maybe I'm the only one who gets exasperated but I feel my time is important too. At least, if I were home, I'd be dashing from one job to another in hopes of accomplishing something.

xxx

When I told my children that I remember the SesquiCentennial held in Philadelphia in 1926, they looked at me askance. Was I really that old? It was a nice feeling to realize that they didn't think of me as being that old.

Being very young, my parents and grandparents impressed on me the fact that this was as important occasion which should be remembered. I do know that we toured a large ship and the beautiful state rooms were quite elegant. There also was a train which we walked through as it was on display, I believe.

Probably I should remember the long trip on the open touring car but I don't. My grandfather gave me a coin that was minted for the occasion and today it is most likely worth more then it was then.

Celebrations come and go but next years Bicentennial is one we should all participate in as without the courage and determination of our ancestors we would not have all the blessings which we enjoy today.

Society 9 meeting at 12:30 p.m.
Society 15 meeting at Kefels

Berks County Society 6

The Society of Farm Women, 6 met recently in the home of Mrs. Steven Fisher, Oley R1, Pa. Thirteen members attended. Some business items were paid and discussed. Our women made favorable comments on our recent trip to Harrisburg and Hershey, Penna. We also discussed our family picnic held at Yetto's Grove. Women, husbands and children enjoyed, refreshments prepared by our ladies and games and prizes - it was held on August 17, 1975.

We then turned our meeting over to Mrs. Hildegrade Gehard, of Bally, Pa., who is a Tupperware Dealer. We were given a demonstration of Tupperware Products and a few games were played. Everyone choose items they desired and we were given some recipes to make in Tupperware containers.

Our Hostess served refreshments of which one was homemade ice cream. Our next meeting will be Tuesday, September 23, in the home of Mrs. Jacob Hartx. This will be a School Days Evening.

11:00 a.m. for lunch.

Friday, Sept. 12
Society 13 meeting at 7:30 p.m. at the Horst Museum in Witmer.

Saturday, Sept. 13

LADIES, HAVE YOU HEARD?

By Doris Thomas, Extension Home Economist

How To Clean Fabric Shoes

Summer shoes with fabric tops can be cleaned. Try the following directions for best results.

First, stuff the shoes with newspaper to protect the soles from water. Then remove dirt and grime from denim and other unlined fabric shoes with suds made by adding detergent to soap or water. Whip up fine, small suds using a blender or mixer.

Wipe the suds onto the shoes with a brush. Use a sponge to remove the dirty foam. Replace the damp newspaper with dry stuffing before the shoes dry. The newspaper will help shape the shoes while they dry.

Try not to wet those shoe fabrics with glued linings — burlap, for example. Instead, stuff these shoes with newspaper, then spot clean them with dry cleaning solvent.

Prevent Whiplash Injuries In Infants and Children

Hark ye, good parents, to my words true and plain
When you are shaking your baby, you could be bruising his brain,
So, save the limbs, the brain, and the life of your tot;
By shaking him never; never and not.

This is the way John Caffey, M.D., of Children's Hospital in Pittsburgh poetically summarized the problem and prevention of whiplash injuries. He explains that whiplash-shaking and jerking of infants and young children may cause permanent damage to bones, the brain and the eyes. It may even be the major cause of sudden unexplained "crib" or "cot" deaths.

What seems to be a harmless practice of repeatedly "shaking" infants and small children to correct minor misbehavior may actually be far more serious than a single blow or bump on the head.

Rhythmic whiplash habits of the infant himself may develop during the first month of life — head-rolling, bodyrocking and head-banging could be harmful to the baby's brain and veins. Also, repeated severe breath-holding spells could damage the brain.

Unfortunately, many toys and recreational equipment such as baby bouncers and infant jumpers, powered cradles and powered rocking horses, generate whiplash-shakes and jolts to the head. For younger children, swings, seesaws and playslides in amusement parks, powered vibrating equipment, trampolines, skateboards and sled jumping may cause bleeding in brains and eyes. Bicycles, motorcycles, snowmobiles and other vehicles carrying infants and small children over rough terrain and speedboats and small airplanes in rough weather may be damaging.

In addition, a baby's or young child's head is subjected to some of the same stressed during playful, repeated vigorous "tossing the baby into the air"; "riding the horse"; "skinning the cat"; and "cracking the whip" or gripping the infant by his ankles and swinging him in a circle.

These "games" seem innocent but when practiced frequently they also could be permanently damaging or even fatal. Sometimes older brothers and sisters play too roughly with infants and small children, shaking or spinning them until they are dizzy. Even to a child of four to eight years, habitual diving headfirst into water, water skiing, gymnastic tumbling, boxing, wrestling, playing football and basketball may be dangerous. In some of these, the training sessions of several hours each week are more hazardous than the games and performances themselves.

Remember Dr. Caffey's poem, and never shake or jolt your infant or young child. If you have a child or infant who is a constant head-roller, bodyrocker or head-banger, check with your doctor, well-baby clinic or mental health center for advice. The child may be normal and merely going through a phase of development or the situation may represent a problem. Lastly, have your child wait until a "safer age" to participate regularly in "jolt producing" sports.

xxx

Lots of flexing may build up human bodies, but too much flexing tears down tires. Underinflation causes an extreme "giving" motion in the rubber and fabric, which overheats and strains the bond between layers of tire material.

Farm Women Societies

Society 11

In celebration of the 49th anniversary of the organization of Farm Women Society 11, the members recently held a dinner at the Robert Fulton Inn.

The event was attended by 23 members and five guests. The society has only one charter member, Mrs. Ethel Musser.

Devotions were given by Mrs. Bessie Ressle with the group repeating the 23rd Psalm.

The program included musical selections played by Mrs. Kreider on the organ and Phillis Ferguson on the flute. A duet was sung by Mrs. Huber and Mrs. Fite.

The next meeting will be held Sept. 25 with a covered dish luncheon at Huffnagle Park at 12:00 noon. If weather does not permit it will be held in the Memorial Methodist Church in Quarryville.

Society 23

Farm Women Society 23 will meet at the home of Mrs. Fred McGhee, Bigmount, on Monday, Sept. 8 at 8:00 p.m. Mrs. George Mummert and Mrs. Dean Zeigler will be in charge of the program.

Society 23 recently entertained Society 28 at Mrs. Maurice Staub's with 22 members present at the covered dish social.

Society 13

Farm Women Society 13 held their annual family picnic at the Lancaster County Park recently.

Mrs. Robert Bomberger served as chairperson for the food committee and Mrs. Raymond Denlinger headed the program committee.

Following a covered dish supper which featured roast corn and barbeque games were played.

The next meeting for the members and their husbands will be held on Sept. 12 at the County Cragts of Witmer at 7:30 p.m. Hostesses will be Mrs. Gordon Reotzel, Mrs. Phares Leed and Mrs. Aaron Myers.

Berks Co. Society 5

Farm Women Society 5 of Berks County met recently at the home of Mrs. James Hoover, Womelsdorf R1.

Twenty-two members and one guest answered the roll call, "what is your favorite quick dish?"

Speaker for the program was Mrs. Alletta Shadler, home economist from Lebanon who gave an interesting talk on food canning and different uses for foods.

Following devotions, the president Rhea Schoener conducted the business meeting. The following upcoming events were announced: Sept. 19 - Bake sale at Dutch Way Farm Market from 6-9; Sept. 21 - family picnic to be held at Weiss Grove in Rehrersburg; Sept. 23 - Night of entertainment held by Society 2 at the Swatara Church of the Brethren.

Deadline for the tickets for the County convention on Oct. 4 is Sept. 8. Contact Betty Wessner or Rhea Schoener for more information.

The next meeting will be held Sept. 22 at Zion Lutheran Church in Womelsdorf.

xxx

When shoes scuff you may not be walking properly, and when tires scuff they, too, may not be aligning properly. The alignment of your wheels in relation to the direction of travel should be checked if you're "scuffing," suggests the Tire Industry Safety Council.

xxx

Don't make waves on the highway or your car may hydroplane out of control. A car moving too fast in rainy weather can build up a wave of water between the tires and the pavement.

Create With Crepes

Instead of the usual puddings, cakes and pies offered for dessert each night, why not try something really tasty and easy to prepare. We're talking about dessert crepes — a delicate pancake type pastry filled with anything from fruit to cheese: Following is the basic recipe for crepes.

In a medium bowl, beat 3 eggs, 1 cup of milk, 1 cup flour 2 tablespoons sugar, 2 tablespoons melted butter, ½ teaspoon vanilla and ¼ teaspoon salt until blended. Cover and refrigerate at least two hours or overnight.

For each crepe, lightly brush bottom and sides of a skillet with melted butter. Heat skillet over low heat and pour in ¼ cup batter tilting pan to coat evenly. Cook 3 minutes or until top is set and underside is golden. Turn crepe and cook 30 seconds or until other side is golden. Slip crepe onto waxed paper and repeat. Makes 16 crepes.

Crepes can be filled with fruit toppings and rolled. Or can be rolled empty and covered with syrup or fruit preserves. Either way they are delicious and easy to prepare.

Crepes have been an elegant dessert in Europe for hundreds of years and are beginning to find popularity in this country.

xxx

Raisin Drop Cookies

Mix together 1 cup raisins and 1 cup water boiling. Cook until liquid has been reduced to ½ cup.

Cream together ¾ cup margarine, 1 egg, 1 cup sugar. Add 1 teaspoon vanilla, 1 teaspoon soda, 3 cups sifted flour and 1 teaspoon baking powder.

Mix alternately with raisin mixture and drop by teaspoons on baking sheets. Bake in 345 degree oven for 15 minutes.

Annie Swarey
Peach Bottom, Pa.

xxx

Sand Tarts

½ cup granulated sugar
½ cup brown sugar
½ cup butter and lard (¼ of each)
1 egg well beaten
2 cups flour
1½ teaspoon baking powder

Refrigerate several hours. Roll out and cut with cookie cutters. Decorate with well beaten egg yolk brushed on the top.

Vera Zimmerman
Denver, Pa.

xxx

Sugar Cookies

3 beaten eggs
3 cups brown sugar
1 cup lard
1½ cup buttermilk
2 teaspoons soda
½ teaspoon nutmeg
2 teaspoons vanilla
6 cups flour

Combine ingredients and bake in moderate oven for 8-12 minutes.

Emma Glick
Quarryville, Pa.

xxx

Date Pudding

1 cup brown sugar
1 cup water
1 tablespoon butter

Batter:

½ cup brown sugar
½ cup milk
1 cup flour
½ cup chopped nuts
½ cup chopped dates
2 teaspoons baking powder
¼ teaspoon salt

Boil brown sugar and water for three minutes. Remove from heat and add butter. For batter, sift sugar, flour, baking powder, salt and add milk. Stir until smooth. Fold in dates and nuts. Pour syrup in pan or greased baking dish. Pour batter over the top and bake at 350 degrees for 30-40 minutes. Top with whipped cream.

Lydia Beiler
New Providence, Pa.

xxx

Chicken Chive Fracassee

3 lb. broiler-fryer chicken
2 t. salt
¼ t. black pepper
4 T. butter or margarine
2 T flour
1 chicken bouillon cube
1¼ c. hot water
⅛ t. instant minced garlic
2 T. dried chives
Cooked hot rice

Wash chicken and cut into serving pieces. Rub salt and pepper into chicken. Brown chicken in butter in Dutch oven. Blend flour with pan drippings. Stir in bouillon cube, water, and minced garlic. Cover and simmer 20 minutes or until chicken is tender. Add chives and cook 5 minutes. Serve hot with rice Serves 6.

I have varied this recipe by adding a little more water and cooking the rice with the chicken.

Donna Hetzel
Atlanta, Ind.

xxx

Chess Pie

An old recipe my great aunt used to make.

½ c. butter or margarine
1½ c. sugar
3 eggs beaten
1 T. vinegar
1 T. corn meal
1 t. vanilla extract
1 8" unbaked pie shell

Cream butter or margarine well. Add sugar slowly, creaming until light. Slowly stir in beaten eggs. Add next 3 ingredients and mix thoroughly. Pour into unbaked pie shell. Bake at 350 degrees for 45 min. or until mixture sets.

Serve in small wedges since this is very rich, surprisingly.

xxx

Poorman's Cake

2 cups sugar
2 eggs
6 tablespoons butter or oleo
1 cup sweet milk
3 cups all-purpose flour
3 teaspoons baking powder

Beat eggs and sugar together. Melt butter and add mixing again. Pour in milk, add flour and baking powder.

Bake at 325 degrees for 35 minutes. A very moist cake. Makes two 9 inch layers.

Mrs. Luke Wise
Lebanon, Pa.

xxx

Dauphin Co. Society 1

Society 1 will have their next meeting on Sept. 9 at 7:30 p.m. at the home of Barbara Fisher. All members are invited to attend.

xxx

Tires may tell you a lot about the safety of the second hand car you're looking at. For instance, tread excessively worn at the edges could mean the car was overloaded or cornered very hard, says the Tire Industry Safety Council. It also may need front end maintenance.

Junior Cooking Edition

Home on the Range

Our junior readers have whipped up some good dishes for sharing and we hope you'll try one or more. We're looking for good cake recipes so if you have one why not send it along. Also much thanks to those who sent in recipes for spaghetti sauce!

Chocolate High Hats

Combine in a mixing bowl:
1½ cups occident flour
1 teaspoon salt
1 teaspoon soda
1 cup packed brown sugar
½ cup shortening
1 egg
two-thirds cup hot water
2 envelopes no-melt unsweetened chocolate
½ cup chopped nuts
½ cup marashino cherries

Beat at medium speed two minutes. Spread in a greased 13 x 9 inch pan. Bake at 350 degrees for 25-30 minutes or until top springs back. While baking cut 12 large marshmallows in half. Arrange marshmallow halves cut side down on hot bars. Put back in oven for marshmallows to soften. Place a spoonful of chocolate frosting on each marshmallow.

Gasoline evaporates very rapidly when exposed to air. You cannot see it. Keep gasoline in a safety metal can which is available from most hardware stores. It is not safe to use gasoline for starting fires, cleaning floors, engine parts, paint and similar activities, says the Safety and Emergency Preparedness Committee of The Pennsylvania State University.

Dry your own herbs

Drying Herbs and Spices

You can easily dry your own celery leaves, chives, onion tops, garlic tops, and other herbs. However, proper handling is as important to the success of your herb harvest as good cultural conditions.

Most herbs are at their peak of flavor just before flowering, so this is a good time to collect them for drying and storage. (Onion tops, however, should be harvested before bloom, and garlic won't bloom until the second season.) Cut the stalks early in the morning just after the dew has dried. Cut annuals off at ground level, and perennials about one-third down the main stem to include side branches.

Wash plants lightly in running water to remove any soil, dust, bugs or other foreign material. Dry on absorbent towels.

Strip the leaves off the stalks, leaving only the top six inches. Remove all blossoms. With a piece of string, tie six to twelve stems together. Then tie a large brown paper bag around the bunch, being careful that the leaves do not touch the sides of the bag.

Hang the bags in a warm, dry, airy room until the herbs have dried. When the leaves have dried, shake them from the stems.

Another way to dry herbs is to remove the leaves from the plants, wash them, and spread them thinly on screens to dry. Cheesecloth makes a good screen material and streches well. Do not expose the herbs to bright light during their drying period, because light tends to destroy the green color of the foliage.

When completely dry, the leaves may be screened to a powder or stored whole in airtight containers such as Mason jars. It is very important to watch the jars closely for several days. If you see any moisture in the jars, remove the herbs and dry them again. Herbs will mold quickly in closed jars if they are not completely dry.

Label and place them in a cool, dry place away from light.

Seeds are dried much as foliage, but it may take as long as two weeks for the larger seeds to dry. Take care not to damage seeds when removing them from the seed heads.

Provided by Chester Co. Extension Service.

Area resident graduate

John Umble, Atglen R1, has just returned from Kansas City, Missouri, where he successfully completed the course in Auctioneering and Auction Sale Management at the Missouri Auction School.

He received his diploma and the honorary title of Colonel along with men and women auctioneers from throughout the United States and Canada.

Col. Umble has lived in Atglen all his life. He is married and the father of five children. He is self employed as a Farmer.

Robert H. Kauffman, Elizabethtown R1, completed the course in Auctioneering and Auction Sales Management at the Missouri Auction School, also.

Kauffman was born in Landisville, Pennsylvania, and moved to Elizabethtown 13 years ago. He is married and the father of three children. He is a director of the Commonwealth National Bank, The Elizabethtown Area School District and of the Pennsylvania Holstein Association. He is a member of the Congregation Bible Church of Marietta. He is self-employed as a farmer.

Canning center is the first in the state

By Melissa Piper

The first community canning center in the state, located outside of Lebanon, opened its doors to home canners for the first time on Tuesday, Sept. 2.

Housed in the old Martin's Market on Rt. 422 east of Lebanon, the canning center is making available jars, lids (at wholesale prices) and specialized equipment to aid the individuals who wish to do preserve fruits, vegetables and sauces.

The Canning Center, the only one in the state, is a pilot project under the Department of Agriculture and the Bureau of Rural Affairs to determine the savings to the individuals who would otherwise have to purchase the needed equipment himself.

There is no charge for using the canning center but the individuals must bring their own produce and containers. Jars and lids are available at the center but only for those people using the center to can. They are not being offered for sale otherwise.

The center is equipped with specialized canning equipment including atmospheric cookers, pressurized processing baths and large heated kettles for making spaghetti sauce and applesauce.

Two ladies from the Lebanon area have been hired to supervise the canning at the Center. Mrs. Janet Fortna, Lebanon is serving as an assistant with Mrs. Jane Honigman, a home economist, also supervising.

(Continued on Page 46)

Mrs. Pat Vance, Rehersburg, was one of the first home canners to use the community canning center near Lebanon. Green beans was the order of the day as the canner is shown cleaning them.

Checking over some green string beans ready for the pressurizer are Jane Honigman (left) home economist at the center and Judy Stover, supervisor from the Dept. of Consumer Affairs in Harrisburg.

4-H

The monthly meeting of the Broken Bit 4-H Horse Club was held at the home of Rick Buckwalter. Natalie Immel presided over the business meeting. Business discussed included a bake sale at the Lancaster Riding Club, a trip to Cowtown Rodeo on August 30, and a field trip to Dr. Edelson's horse farm. Robert Gregory, leader, informed the club about the 4-H Breeding Show to be held in Bloomsburg.

Representing the club at the District Horse Show on September are: Natalie Immel, Brian Immel, Jane Gregory, Dee Dee Rice, Leslie Sherman, Rick Buckwalter, Sue Slater, Karin Risser. Martha Gregory gave a County Council Report. The club scrapbook received second place at Achievement Day. Natalie Immel and Sue Slater represented the club in the 4-H Senior and Junior Queen Contest respectively.

Following the meeting, Tom Keller gave a demonstration on Western riding attire, Rick Buckwalter gave a demonstration on bridles, and Jon Keller gave a demonstration on riding a trail horse. The next meeting will be held at the home of Dee Dee Rice.

Canning center is

Continued from Page 45

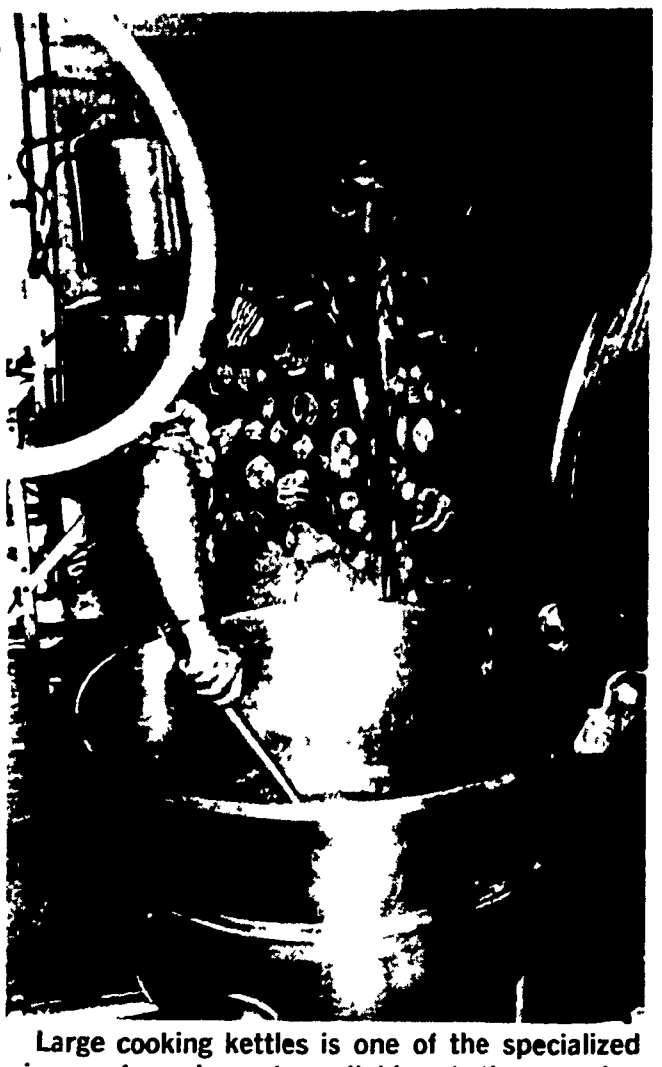
Judy Stover, representing the Consumer Service for the Commonwealth and acting supervisor for the Center explained its beginning.

"We had received literature to the effect that other states were trying the community canning centers and we thought that perhaps we could give it a try."

"The center is a research project under the Bureau of Rural affairs," Mrs. Stover, explained, "and we are really trying to determine the feasibility of canning at such a center compared to the home canning."

Commenting on the reaction, area residents have shown, Janet Fortna, supervisor assistant, noted, "the reactions have been good."

"We've had about 10 different individuals in to can since we opened a day ago which we think is pretty favorable."



Large cooking kettles is one of the specialized pieces of equipment available at the canning center. Mrs. Janet Fortna, assistant supervisor for the facility, gives a batch of spaghetti sauce a stir.

Jane Honigman, home economist at the Center, explained that there were still many adjustments to be made but things were running pretty smoothly."

"Just getting started we still have some things to get yet, but we're doing well."

The Department of Agriculture has announced that the Center will remain open as long as there is sufficient demand for it. The facilities will be open six days a week from 9:00 a.m.-4:30 p.m. with supervisors on hand to help with the preserving.

Although the center is well equiped to allow several people to can at one time, appointments must be made before coming to the facilities. Appointments can be made by calling 717-274-2031. Any state resident is welcome to use the Center to aid in their home canning.

Did you know you could actually lose up to 10,000 miles of tread life in one busy day of extremely bad driving? Tire testing experts have done it with continuous jackrabbit starts, screeching turns and panic stops, which can rub and peel off thousands of miles of tread life prematurely. Drive intelligently.

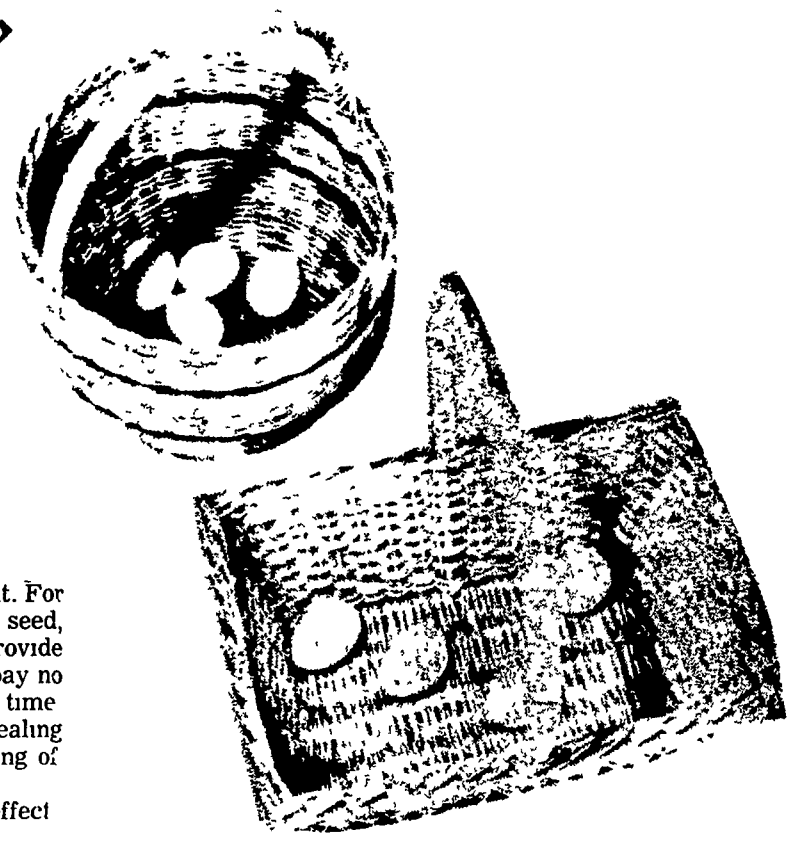
FARM CREDIT SERVICE

FARM CREDIT

There is a time when it doesn't pay to have your eggs in too many baskets.



There are certain advantages to be gained by centering your farm credit needs at Farm Credit. For example, if your plans for the year ahead include a new piece of equipment, spring fertilizer and seed, and perhaps an improvement to your farm home, you can arrange now for a Farm Credit loan to provide the total amount you will need You can draw on these funds as you need the money You will pay no interest until the money is actually in use And then, only on the actual amount in use at any given time In addition, by centering all your credit needs at Farm Credit, you will have the convenience of dealing with one source, the security of knowing cash will be available when needed, plus the cost-saving of Farm Credit's reasonable interest charges

Why not discuss your plans with Farm Credit now Then when the time comes to put them into effect the necessary funds will be waiting for you

Coffee damaged in summer frost

WASHINGTON - Brazil's current (1975-76) coffee crop will not be reduced as a result of July 17 and 18 frosts and freezing, but the 1976-77 crop may be off by more than 50 percent.

That is the conclusion reached by a U.S. Department of Agriculture team in a survey of major coffee producing areas in Brazil. The freeze and frosts hit practically all coffee producing areas, and were particularly severe in the states of Parana and Sao Paulo. Damage in Minas Gerais was minimal.

The 1976-77 Brazilian coffee crop, which will be harvested beginning about May 1976, will probably amount to 8 to 11 million 60-kilo bags (132.276 pounds each). This compares with a crop of 23 million bags harvested in 1975-76.

Effects of the freeze will undoubtedly reduce the 1977-78 crop as well, since a large number of trees will need substantial pruning or replacement, and will require more than one year to recuperate. Recovery could be hastened, however, by favorable weather, including beneficial rains.

There will be adequate coffee for world requirements in the 1975-76 marketing year (October-September). Brazil had a carryover stock on June 30, 1975, of about 21 million bags, and many other producing countries have sizeable carryovers as well. However, a tighter world coffee situation is expected after September 1976.

By December of this year, it will be possible to make a more accurate estimate of the 1976-77 crop, as well as the production potential for the following year.

The team members were J. Phillip Rourk, Sugar and Tropical Products Division, FAS, Washington, and Leon Yallouz, Agricultural Office, U.S. Consulate General, Rio de Janeiro.

Like a good neighbor, State Farm is there.

Dairy goat group to form at Blue Mt.

Dairy Goats for fun and profit will be the topic of discussion at an organizational meeting for a possible Blue Mountain Area Dairy Goat Association. Interested adults and youth are invited to attend an informal get together on September 11, 1975 at 7:30 p.m. at the Schuylkill County Cooperative Extension Office, Route 61 (Penn State Branch Campus) south of Schuylkill Haven.

Several people with dairy goats are interested in organizing an educational organization for anyone interested in raising dairy goats. It is hoped that if there is enough interest that several projects could be organized such as an artifical insemination bank, dairy goat milk cooperative, and buck inter-change program.

Individuals presently are interested in setting up informal educational programs including topics such as dairy goat feeding and management, pasture establishment, maintenance, and renovation, constructing trench silos, selecting goats, and building for dairy goats. Milk and milk by product marketing would also be topics to be considered by the potential dairy goat association.

Interested adults and youth are invited to attend or call Terry Bortz, County Agent - Agriculture, (717-385-3431) or Jean Bell (717-739-4064) if you would like more information.

Maryland farmers increase productivity amidst inflation

ANNAPOLIS - Farm products sold in Maryland during 1974, including field crops, livestock and poultry, brought farmers nearly $623.0 million, it is reported by the Maryland Delaware Crop Reporting Service, the farm statistics gathering unit of USDA and the Maryland Department of Agriculture.

The 1974 Crop Report indicates that the Eastern Shore's poultry (broilers) industry brought in the largest share, $166.6 million, followed by dairy products, which accounted for $130.8 million, or 26.8 and 21.0 percent of the total receipts respectively.

During 1974, Maryland farmers sold $85.8 million worth of corn, $54.8 million of soybeans, $28.5 million of tobacco and $16.5 million of wheat. These sales represented substantial gains over the year before, as farmers responded to the plea to produce more food to help feed the world.

Cash receipts from the sale of field crops, such as wheat, corn, and tobacco totaled $198.1 million up 70 percent over 1973. Receipts for all crops totaled $253.1 million, a jump of about 30 percent over the previous year.

Receipts from sales of cattle were down from $43.9 million in 1973 to $29.2 million last year. Hog sales also dropped slightly to $19.2 million as compared with $20.2 million in 1973.

While cash receipts for last year represented an overall 7 percent increase above 1973, State Secretary of Agriculture, Young D. Hance, expressed the view that the gains farmers experienced were, in many cases, offset by what he described as "astronomical increases in production costs."

Mr. Hance observed that while poultry sales were high, they fell $13.2 million behind the previous year's figure. As another example, he cited receipts from dairy products, which were up over the 1973 mark by $16.9 million, but did not keep pace with soaring coasts for feed, fuel and other items.

"Farmers", the state agriculture official remarked, "bear the burden of an inflation that has driven up farm operation costs, including labor and fuel, usually well beyond any increase in the farm price for their commodities." He pointed out that a ton of fertilizer that costs $80 two years ago now sells for $300. A tractor that went for $14,000 in 1973 currently costs $17,500.

Mr. Hance stressed that prices for everything, including the consumer goods that a farm family requires, such as automobiles, gasoline, utilities, clothing and appliances have risen sharply.

Mr. Hance said that today's farm family faces the same economic problems that confront the urban resident. "The farm wife" he said, "buys most of her groceries in supermarkets. Few if any present day farmers are self-sufficient in terms of food. And, their household requirements parallel those of city dwellers".

Dairymen defended

WASHINGTON — Representative William C. Wampler of Virginia claims that a good case can be made for 100 per cent of parity for dairymen. In making the statement last month, the ranking Republican on the House Agriculture Committee granted that the statutory maximum has been 90 per cent of parity and USDA has rarely been willing to go that high.

He cited a University of Wisconsin study indicating that Jan. 1975 feed costs were $4.18 per hundred pounds of milk. With the support level at $7.24, this meant that producers had only $3.06 per hundred pounds to cover fuel, fertilizer, breeding, veterinary services, real estate, machinery, overhead and utilities, wages and a fair return on capital investment, he explained.

Wampler warned of impending bankruptcy for many of the nation's dairy farmers "unless the government acts, and acts soon enough."

Area plowmen receive awards

Frank Burkhart, a Lancaster County resident and farmer, won the first place award in the plowing competition held recently in Mercer County in conjunction with the annual Ag Progress Days.

Burkhart's victory marked the third year in a row that the area resident had taken awards in the plowing competition. This year's win was in the contour plowing contest while Burkhart had won first in the small plow competition last year and first in the large plow contest two year's ago.

Harvey S. Sauder, New Holland R1, tied with a farmer from Sharon, to win third place in the small plow division.

Richard Binkley, Columbia R1, placed third in the large plow competition also.

Silage Contest Winners

Lancaster County farmers captured a number of victories in the silage competition also held at Ag Progress days. The grand champion sample was exhibited by Lewis Shore, Washington Boro while Albert Mellinger, Strasburg, had the reserve champion exhibit.

Raymond Bucher, Lancaster, took top honors in the whole corn plant competition in the non-nitrogen class.

NATIONAL ASSOCIATION ANIMAL BREEDERS NAAB Know Your Semen Supplier

York Fair is 210 years young

The York Inter State Fair, which got underway yesterday and runs through September 13, is considered to be one of the oldest, largest, and most outstanding fairs in the nation. The Fair was first held in 1765, ten years before the Declaration of Independence, under a charter signed by Thomas Penn, son of William Penn, founder of Pennsylvania. Under that charter, York was granted the privilege "forever hereafter" of holding two Fairs a year, one in the Spring and the other in the Fall.

After fifty years, the original series of historic Fairs came to an end in 1815. Thirty-six years later, in the year 1851, the Fair idea was revived. On November 22, 1851, a number of prominent citizens met in the York County Court House and organized what is now known as the York County Agricultural Society.

From this time on, with the exception of two years, an annual Fair was held in York. In 1855, it was "deemed inexpedient" to conduct a Fair in York "in view of the State Agricultural Fair being held in Harrisburg." In 1918, due to the war-time epidemic of influenza, the scheduled Fair was likewise cancelled and the fair buildings and ground were used for hospitalization of those afflicted with this dread disease.

The first Fair of the York County Agricultural Society was held on the Town Commons, now Penn Park, October 5, 6, 7, 1853, and also the following year, 1854. The Society then acquired seven acres on the south side of East King Street, immediately East of Queen Street to which seven more acres were later added. The first Fair on the King Street ground was held Wednesday, Thursday and Friday, October 8, 9, 10, 1856. These two acquisitions comprised what later became known as the Old Fair Ground, bounded as follows:

Beginning at the southeast corner of East King Street and Fair Alley; thence along East King Street, eight hundred and sixteen feet to southwest corner of Edgar Street; thence along the west side of Edgar Street, three hundred and twenty-two feet to property of Henry Bierman; thence by lands of Henry Bierman and H. W. Grothe, six hundred and eighteen feet to the Spring Garden Plank Road; thence along the line of said Plank Road (now Prospect Street) six hundred and seventy-six feet to property of William Hawk; thence by property of said Hawk and others to Fair Alley, seven hundred and twenty-two feet to the place of beginning. Containing thirteen acres and one hundred and fifty-one perches, more or less.

This plot was used as a Fairground for thirty-one years from 1856 to 1887. In 1887, the Society purchased from Samuel Smyser a farm of seventy-three acres in West Manchester Township, which, together with subsequent purchases, became the site of the present York Inter-State Fair Ground.

The first Fair was held on the present ground, October 2, 3, 4, 5, 1888. Today its 120-acre enclosure is a model of permanent fair construction and maintenance. When the Fair is not being held, the ground is used for religious, patriotic, civic and other local gatherings.

The Association's roster, including names of men who have gained prominence in many fields, reads like a "Who's Who" for York. Today, the York Inter-State Fair enjoys an international reputation as one of America's greatest Fairs. This year's star attractions include Charlie Pride, a national championship rodeo, Musical Americana, a national championship demolition derby, Donna Fargo, Sha Na Na, Lynn Anderson and the American Thrill Show.

Kempton youth graduates

Margaret Rose Fenstermacher of Kempton, R2 has earned an associate degree in Elementary Education at Lehigh County Community College. She will continue her education at Kutztown State College.

The daughter of Mr. and Mrs. Warren P. Fenstermacher, Margaret Rose was a 1973 graduate of Kutztown Area High School. For the past three years, she was in charge of the 4-H Fun to Bake Club. She had previously served as a teen leader. As a 4-H member, she served as Secretary and won a blue ribbon for her work. She completed projects in cooking, sewing and bicycling. She is presently serving as substitute teacher of the Preteen class at New Bethel Sunday School. She also served as one of the teachers of the Junior High class at Vacation Bible School. One of her hobbies is feeding the cows on their dairy farm and taking care of Lucky, their pet dog. Other hobbies include swimming, bicycling, and playing the piano.

CHEAP? NO. ECONOMICAL? YES. SAVINGS ARE WHAT KEENCO STARTER-GROWER SYSTEMS ARE ALL ABOUT. SAVINGS IN DOLLARS. AND IN TIME.

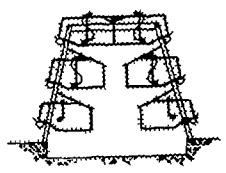
Grow your own pullets and save up to 50¢ a bird. Or, convert your floor operation and save a pound or more of feed per bird. At today's prices, that ain't chicken feed.

Keenco 2 and 3 high cage systems are fully automated. That means you spend fewer hours doing unproductive labor, have more time for management. You get dollar-saving feed conversion.

healthier birds, more uniform flocks time after time. And you end up with more productive layers because they've grown up in, and are accustomed to, a cage environment.

Keenco's Zoned Heating takes the sting out of the energy crunch. You can put three to four times more birds in your old floor house—and use less fuel.

All this plus Diamond Automation's Total Help Program. Help in converting your old-fashioned floor brooding operation. Help with planning. With selecting the right equipment. Installing it. Financing it. Operating it more profitably.



Keenco 3 High Starter-Grower System. 2 High Systems also available.

What's New . . .

PROTECTIVE COVER

Griffolyn 80 TM, a new nylon-reinforced plastic fabric with high puncture resistance and tear strength, has been developed by Griffolyn Company, Inc. for use covering hay, silage, crops, or equipment stored outdoors.

This new addition to the Griffolyn line of reinforced plastic fabrics offers the added advantage of costing less than other similar materials.

Griffolyn 80 is lightweight, rip-proof, mildew-proof, waterproof, and air-tight. It has high impact strength and good abrasion resistance.

Multipurpose Griffolyn 80 can be used for covers and temporary or permanent shelters to protect livestock, crops, or equipment. Handy removable Griff-Clips help fasten Griffolyn in place.

Griffolyn 80 is easy to handle and install, and it is available in many standard sizes. Free samples are available by calling toll-free (800) 231-6074, or by writing Griffolyn Company, Inc. P. O. Box 33248, Houston, Texas, 77033.

WINDROW PICKUP

A new Super-Sweep windrow pickup to provide more efficient haylage operations by family farmers and other smaller operators is now available with Sperry New Holland's tractor-mounted Model 707 Forage Harvester.

The windrow pickup, designated the "707W", incorporates the "Super-Sweep" concept originally pioneered by Sperry New Holland. Tines are closely spaced,2-⅝ inches apart, to clean sweep more of the crop into the pickup, providing a more efficient harvesting operation and reducing field loss.

A gauge wheel, which aids height adjustment over rough terrain, is a standard feature.

In addition to the windrow pickup, the Model 707 is also available with a one-row corn head.

The "707" is designed specifically for the smaller operator who puts up less than 40 acres of corn silage or less than 30 acres of haylage a year.

ROLL-n-STOR ROUND BALER

Badger Roll-n-Stor is the newest addition to a growing line of Badger hay and forage equipment for the farm. It unites the rugged strength of heavy gauge steel with strong, tough belts to produce round, twine-wrapped bales that weigh between 1200 and 1500 pounds.

This unit is designed for tractors with 50 to 70 horsepower. It is short-coupled and operates off the tractor power-take-off to quickly and efficiently convert a hay windrow into a round bale. Automatic belt tension mechanism produces high density, large round bales with a relatively soft core and high weatherability.

Features on the Badger Roll-n-Stor include a hay pickup that lifts the hay into the bale chamber compression roller without skips; positive drive platform rollers which reduce leaf loss by gentle handling; belt guides that keep belts in place without twisting, thus forming compact round bales that measure a full five feet wide; and, a hydraulic bale ejector which can be activated by the tractor operator to produce round bales ranging from two and one-half feet in diameter to as large as six feet.

The new Badger Roll-n-Stor Round Baler weighs 4,360 pounds. It is constructed of high strength steel components and mounted on a rigidly designed frame which is supported by two 8 ply flotation implement tires. The round baler has fewer moving parts than rectangular balers so there is less chance for breakdowns. Low maintenance and service costs are provided by the application of simple mechanical principles.

A simple, ruggedly constructed bale carrier which mounts on a three point hitch is available as optional equipment.

For more information about the Badger Roll-n-Stor Round Baler, write Badger Northland, Kaukauna, Wisconsin. Badger Northland, a subsidiary of Massey-Ferguson, also manufactures a complete line of feed handling and waste disposal equipment.

BALE WAGON

Vermeer Manufacturing Company of Pella, Iowa, has recently introduced a new bale wagon for the easy transportation of large round bales from the field to any convenient storage place.

The Vermeer bale wagon, which is completely hydraulic in operation, holds up to five bales, each weighing up to 1,500 pounds. When loading, the operator merely positions the bale wagon next to a bale and maneuvers a valve lever on the tractor to lower the pick-up forks. The pick up forks, then, hydraulically slide underneath the bale, pick it up and set it on the wagon. After the forks are slid out from under the bale, the Vermeer Bale Wagon is ready to pick up the next bale. The operator handles the entire job from the tractor seat.

The new bale wagon also sets bales down in the exact same position they were before being picked up. This eliminates weather damage caused by setting bales upside down.

Vermeer also manufactures a complete line of large round balers, bale movers, unrollers, and feeders.

Dixie Melody Boys to perform in Lititz

(Editor's Note) The following article is a biographical sketch of the Dixie Melody Boys who will be appearing at the Warwick High School at 7:00 p.m. on Sept. 7, under the auspices of the Garden Spot Gospel Promotion.

In the spring of 1971 five men met in Kinston, N.C. This meeting was to discuss the organizing of a Gospel Quartet to fulfill some request to sing in revivals and a homecoming service once in a while. These men had no idea that in three years their singing would spread over some fifteen states. Their dedication and sincere approach to winning souls became apparent to many church pastors. Gospel music promoters found that their followers were faithful fans and their concert appearances became more frequent. Today this quartet known as "the dixie melody boys" carry a full schedule that will equal any group in gospel music.

The Dixie Melody Boys have five stereo albums to their credit and now record for CAM RECORDS in Oklahoma City, Oklahoma. They have also had some of their most requested songs to be chosen and included in two "ALL STAR" type records.

The Dixie Melody Boys may be seen on any given Sunday Morning by way of TV. Even though they do not have a show of their own, they have been guest on many outstanding Gospel Television Shows such as the Jacobs Bros. Show which covers a large section of the northern states, the famous Huff-Cooke program with eight stations in Va. and W. Va., the Kingsman TV show is also one of their favorites and is seen in many of the southern states.

The Dixie Melody Boys travel in their own private coach equipped to accommodate the eight men that travel.

Members of the group are Ed O'Neal, bass singer and manager, Delmar Tilghman is baritone, John Jarmon, lead, Bobby Craft sings tenor. The background music is furnished by Everette Harper, piano, Reb Lancaster, bass guitar and J. L. Marslender, steel and lead guitar. The eighth man is Allen ONeal, son of the bass singer. Allen is in charge of record inventory and sales and can be found behind the record table at any concert.

All this makes an exciting sound but most of all, when the Dixie Melody Boys come your way, you can be assured that there will eight Christian men presenting gospel music in a Christian fashion.

New Idea's Superpickers

Q QUESTION Will pull-type Superpicker let me bring my corn in any way I like?

A ANSWER Yes, with 2-row Superpicker you can husk, shell or grind in wide or narrow row corn.

The versatile 2-row Superpicker has interchangeable processing units that husk, shell or grind—on the go Corn the way you want it See Superpicker—the really versatile corn harvesting system

Ayrshires complete — records

The National Ayrshire Breeders' Association, Brandon, Vermont recently announced the completed official Dairy Herd Improvement Registry milk production records for the Ayrshire herd owned by Charles H. Gable of Elverson, Pennsylvania.

This is the 22nd year that Conebella Farm pure bred Ayrshires have been officially tested and the 47 lactation records averaged 14097 lbs. milk and 573 lbs. of butterfat with a 4.1 percent test on a M. E. (Mature Equivalent) basis.

Conebella Betty Rue was the highest milk producing Ayrshire in the herd. Her actual 305-day record on a twice-a-day milking schedule is 16800 lbs. milk.

The herds leading butterfat producer is also 'Rue' with 684 pounds fat.

The National Ayrshire Breeders' Association, Brandon, Vermont recently announced the completed official Dairy Herd Improvement Registry milk production records for the Ayrshire herd owned by Milton M. Brubaker of Spruce Villa Farm, Lititz, Pa.

This is the 1st year that Spruce Villa pure bred Ayrshires have been officially tested and the 43 lactation records averaged 11681 lbs. milk and 470 lbs. of butterfat with a 4.1 percent test on a M.E. (Mature Equivalent) basis.

Syrwen Royal Priscilla was the highest milk producing Ayrshire in the herd. Her actual 305-day record on a twice-a-day milking schedule is 15680 lbs milk.

The herds leading butterfat producer is also 'Priscilla' with 635 pounds fat.

Many registered Ayrshire herds are gaining national recognition because of their ability to produce large quantities of milk and meet the challenges of today's marketing needs at an economical level of production.

Twin Valley youths win at Kutztown Fair

The annual Berks County FFA Dairy and Livestock Judging Contests and tractor Driving contest was held recently at the Kutztown Fair. Dairy judging contestants placed four classes of animals - a class of milking shorthorns, a class of ayrshires, a class of holstein aged cows, and a class of holstein senior calves. Michele Gladney R3, Kutztown, Kutztown FFA Chapter, received first place in this contest. Larry Stoltzfus, R2, Elverson, Twin Valley FFA was second; Ken Sanner, R3, Kutztown FFA was third; Mike Miller, R1 Temple, Oley FFA was fourth; Norman Manbeck, R1, Womelsdorf, Conrad Weiser FFA was fifth; Craig Grumbine, R1 Richland, Tulpehocken FFA was sixth; Jeff Miller, R3, Kutztown, Kutztown FFA was seventh; George Carles, R2, Bernville, Tulpehocken FFA was eighth; Jeff Bowers, R4 Reading, Oley FFA was ninth; and Mike Aikens, Honey Brook, Twin Valley FFA was tenth.

In the Livestock judging contest, each participant judged five classes - one of breeding sheep, one of market swine, one of breeding swine, one of Hereford steers, and one of heavy weight market steers. Ray Zimmerman, R5, Sinking Springs, Conrad Weiser FFA won this contest; Steve Davis, R2, Kutztown, Kutztown FFA was second; Art Noss, R3, Wernersville, Conrad Weiser FFA was third; Gail Fultz, R1 Birdsboro, Twin Valley FFA finished fourth; Richard Dietrich, R2 Kutztown, Kutztown FFA was fifth; Earl Mogel, R1 Bernville, Hamburg FFA finished sixth; Cathleen Muth, R1 Alburtis, Kutztown FFA was seventh; Robert Deeds, R1, Birdsboro, Twin Valley FFA placed eighth; Jan Oatman, R1, Honey Brook, Twin Valley FFA ninth; and Darrel Stoltzfus, R2 Elverson, Twin Valley FFA tenth.

The Tractor Driving Contest was won by Jeff Miller, past Berks County FFA President, from the Kutztown FFA Chapter. David Staaby, Conrad Weiser FFA Chapter, placed second; Jim Adams, Hamburg FFA, finished third; Harvey Bitler, Twin Valley FFA, was fourth; George Carles, Tulpehocken FFA, received fifth; Jim Faust, Governor Mifflin FFA was sixth; and Robert Yanos, Oley FFA was seventh.

The vocational exhibit class was won by the Kutztown exhibit entitled, Bossie Goes Metric. Northern Lebanon FFA received second with their exhibit on saving energy. Twin Valley's safety exhibit was third, and Oley Valley's tractor safety exhibit was fourth.

Hidden damage to tomatoes detected by new methods

HONOLULU, HA. - Light-transmittance can be used to evaluate internal damage to tomatoes and may lead the way to better tomatoes in the market place, says John T. Worthington, a U.S. Department of Agriculture (USDA) horticulturist.

The non-destructive technique, electronic infrared light transmittance, could be used to assess the amount of internal bruising in tomatoes that occurs in each step of the marketing process. The technique could also be used to help tomato breeders evaluate new varieties for their susceptibility to damage, to sort tomatoes for maturity and to detect chilling injury in tomatoes exposed to excess refrigeration.

To test tomatoes for internal damage, a special instrument is used that transmits light through the fruit. The amount of light passing through the tomato indicates the density of the fruit. Changes in density indicate changes in the internal structure caused by bruising.

"Mechanical damage to tomatoes is an additive process from the time the tomato is picked to the time the consumer squeezes it to determine quality. Often this damage is not visible, but internal and is an important contributing factor to poor tomato quality and flavor," said Mr. Worthington.

Damage to tomatoes can occur at any stage in the marketing porcess: during picking and packing; in loading and transit; and, in repacking for retail customers. Once these sites of damage can be determined using the light-transmittance technique, however, market specialists of the USDA's Agricultural Research Service will be able to evaluate tomato handling practices and determine the changes needed to improve these practices. This should lead to improved fresh market tomatoes.

Mr. Worthington reported his findings before the 72nd annual meeting of the American Society of Horticultural Science here today.

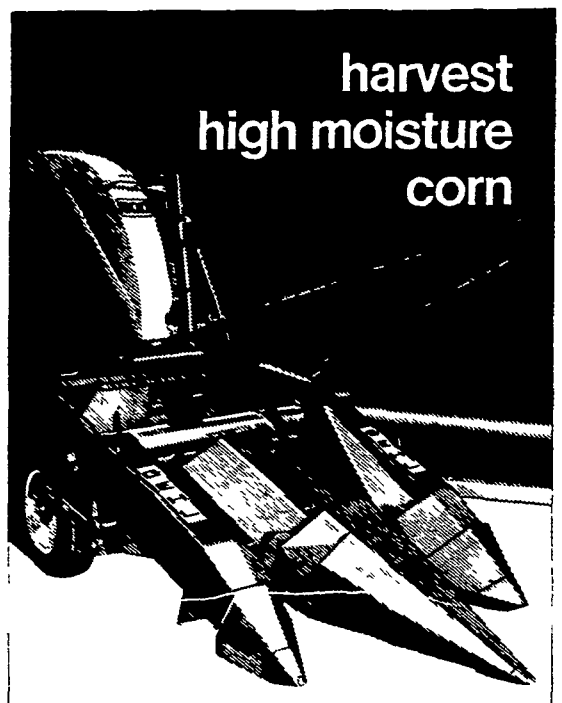
Cattle Feeding

With more favorable market conditions in the cattle feeding enterprise, no doubt many more feeders will be moving into the area this fall. We stress the merits of buying fresh cattle, rather than those that have been hauled in and out of several market places, in order to get more profitable gains. Also, we promote the practice of segregating fresh cattle from acclimated cattle for at least three weeks, because of the danger of infectious diseases· they should not be able to eat or drink from the same containers or to come into contact with each others Segregation and good sanitation are still very important in the livestock business.

harvest high moisture corn



This SH600 two-row snapper head is available now for Gehl forage harvesters It picks only the ears from standing corn then chops them for high moisture corn The attachment is manually adjustable to handle row crop spacings from 28 to 40" apart If you re interested in harvesting only the ears from your corn stop by soon and see this Gehl snapper head

Nutrena Controlled Release CLS—
so different, it's patented

Your cattle will like Nutrena Controlled Release CLS and you'll like the benefits behind this new development in liquid supplements. The patented process controls the release of protein-building ammonia nitrogen in the rumen compared with a conventional urea-based liquid supplement. This improves the feeding efficiency of the urea. And, the slow-down means an extra margin of safety from urea toxicity—that's important when self-feeding liquid supplement.

Nutrena Controlled Release CLS liquid supplement—a product of Cargill research. It's great for dairy herds as well as beef cattle on range, pasture, stalks, stubble or in the feedlot.

Farmfest gaining interest of many

LAKE CRYSTAL, MINN. — FARMFEST '76 - a 1200-acre, seven-day extravaganza destined to be the nation's top bicentennial ag event - is growing faster and bigger than its sponsors ever dreamed . . . and it's still about a year away. Here's a brief look at what's happening:

-The 91-acre exhibit area is sold out.

-Reservations are being taken for probable exhibit area expansion.

-Nearly 500 companies and organizations are already participating.

-Official ARBA recognition makes FARMFEST '76 America's Bicentennial Salute to Agriculture.

-Thousands of contacts have been made for historical and educational contributions.

-Some 50 chambers of commerce are represented on Advisory Council.

-The nation's 465,000 FFA members soon will launch a massive advance ticket sales.

-$200,000 is being invested in the site preparation.

-Prospects of one million FARMFEST visitors are becoming more likely each day.

"FARMFEST '76 is proving that the spirit of '76 is more alive in rural America that anywhere else." says Ed Hart executive director of the event set for September 13-19, 1976, near Lake Crystal, Minnesota. "We're just amazed at the enthusiastic acceptance and national support for FARMFEST '76."

FARMFEST '76 is sponsored by Agricultural Promotions, Inc. (API), a non-profit public corporation of farmers, educators, agribusiness leaders and others. API sponsored FARMFEST U.S.A. in 1972, which attracted 350,000 persons.

"We've had tremendous participation in two preliminary events already." Del Hodgkins, president of API, reports. "Last spring, as a preview of crop conditions, we launched the 1975 Nationl Crops Test Center right here at the site. Ed Hart and his crews planted 106 corn hybrids and 28 soybean varieties in a 300-acre area - the largest demonstration of its kind anywhere in the nation."

"And in July, we were proud to have John W. Warner, head of the American Revolution Bicentennial Administration, here to help us dedicate the site," Hodgkins says. "The ARBA's official recognition is very important to FARMFEST '76. Mr. Warner's appearance highlighted an exciting day-long program with bands, flag-raising by a historic volunteer infantry, 21 shot cannon salute and the kick-off meeting of our broad-based Advisory Council."

This fall will also mark the start of a nationwide advance ticket sales effort by the Future Farmers of America. FFA chapters across the nation will earn commissions by selling tickets at discounted early-purchase prices. At last fall's national convention the FFA designated FARMFEST '76 as its official national bicentennial activity.

According to Hart, dozens of major events and activities are shaping up for FARMFEST '76, including:

AG COMPETITIONS GALORE - 20th World Championship Tractor Pull with $40,000 purse, World Championship Horse Pulling Contest with $10,000 purse, National Horse Plowing Contest, chuck wagon races, FARMFEST "76 Invitational Horseshoe Pitching Contest, and contests in tractor plowing, mechanical corn picking, and hand corn husking.

ONE THOUSAND acres of field and farmstead demonstrations - harvesting, plowing, grain drying, tillage, weed and insect control, seed plots, growing examples of crops from every part of America, livestock breed exhibits, rural homes and living, farm credit, farm buildings, states, cities, and educational institutions.

PERMANENT MEMORIAL to the American Farmer atop a 40-foot knoll overlooking the event, containing a 100-200 year "time capsule" with a momento from each FARMFEST '76 participant.

FREE STAGE SHOWS - top-name entertainers and political leaders appearing before vast audience in the five-acre natural amphitheater northeast of "American Farmer Monument Hill," and a massive final Sunday church service.

HISTORICAL DISPLAYS - antique farm equipment and tools, demonstrations of historic trades and crafts, every tractor ever made, and pageants re-creating the epic story of American Agriculture.

MUCH, MUCH MORE - women's activity center, a working 1900 farmstead, education hall with seminars and programs, possible network television documentary, and commemorative postage stamps, books and albums.

Some firms deserve to be singled out for particularly generous contributions, according to Hart. Big dollar sponsors of special events and contributors of free materials and equipment include: Pioneer Hi-Bred, Trojan Seed, DeKalb AgResearch, Farm Credit Banks of St. Paul, Midland Cooperatives, Farm Wife News, Harvestore, Morton Buildings, Ford Tractor, Chevrolet, P-A-G, Peterson Seed, Moews, Melroe, Crystal Co-op, Ciba Geigy, Monsanto, Feeken Manufacturing, and Snapper Mower.

Seed companies contributing to the 1975 National Crops Test Center are Acco, Asgrow, Cargill, Dairyland, DeKalb, Edward J. Funk, Funk Int'l, Gutwein, Jacques, Kaltenberg, McCurdy, Midland, Moews, Northrup King, O's Gold, P-A-G, Payco, Peterson, Pioneer, Pride, Ramy (Embro), Renk, Robinson (Golden Harvest), Security, Sokota, Teweles (Americana), Trojan and Weathermaster.

FARMFEST '76 is seeking help - ideas about historical materials, projects, and volunteer effort for special promotions - from throughout the nation. The address is FARMFEST '76, Box 76, Lake Crystal, Minnesota 56055.

4-H program gets award

CHICAGO — The 4-H Wheels program, a pre-driver education course for teens, will receive an Award of Honor from the National Safety Council at the Council's National Safety Congress here on Sept. 30.

The award is the highest recognition given by the council for an innovative safety program undertaken by a youth-serving organization.

Wheels was developed jointly by The Firestone Tire & Rubber Company, the Cooperative Extension Service and the National 4-H Service Committee. Each of the three groups will receive a citation plaque at special presentation ceremonies during the youth sessions of the congress at Chicago's Midland Hotel

Designed to promote safety consciousness among young persons 14-16, Wheels is part of the national 4-H automotive program sponsored by Firestone and conducted by the Extension Service. Enrollment in the course is open to all teens without charge through the local county extension office.

Educational materials in the Wheels program include color slides, scripts, tape cassettes, teaching outlines, and member activity sheets geared to pre-drivers and beginning drivers. An organizational guide and promotional materials are also included in the Wheels kit.

The 12-session course is supervised on the local level by community volunteers and covers such topics as the driver's responsibilities, causes and cures of automobile accidents, how the car's engine works, and safe trip planning

The National Safety Council's Award of Honor is part of the council's youth safety awards program, which recognizes youth and youth-serving organizations and individuals for meritorious activities in preventing accidents and promoting safety by and among young persons.

if you're a farmer, we have the money you need.

As a farmer, you know that today's agri-business proves that it really takes money to make money You're constantly updating equipment . . investing in stock and supplies . improving your buildings. And the Friendly First FARM LOAN CORPORATION has the money you need

There are advantages to financing your needs with us because .

- You can arrange a long-term loan to reduce the size of your payments.
- You can get a loan for any size farm—whether you have 50 acres or even 500
- You discuss your needs with local people who have both farming and banking know-how. A talk with our Bob Badger or Darwin Mowery can be helpful with current requirements and they'll also help you plan for the future

Funds are available now. Stop at any office of the Friendly First for complete details on this new service that's already helping farmers like you.

Virus detection to aid mushroom growers

Plant pathologists of The Pennsylvania State University are developing a method to detect virus infections of mushrooms. Eventually the work may save Pennsylvania mushroom growers crop losses of 8 to 11 million dollars annually. The wholesale value of fresh mushrooms grown in Pennsylvania from July 1, 1974 to June 30, 1975 was about $79 million.

The scientists term their work "indexing," a procedure to determine if mushrooms are carriers of the virus. The disease is spread by fragments of infected mycelium, the thread-like strands of fungi functioning as a root system for mushrooms.
functioning as a root system for mushrooms.

Presently, accurate diagnosis of mushroom virus diseases is difficult, says Dr. S. H. Smith, plant pathologist in charge of the virus research. Disease symptoms can be confused with abnormal or unfavorable growing conditions. Proper diagnosis is vital, he affirmed, to set up control programs aimed specifically at the virus - as compared with problems associated with watering, ventilation, and temperature.

The new technique uses antiserum specific for mushroom viruses. When tested with mushroom tissue extract, antibody reactions indicate the presence or absence of viruses. Mushrooms thought to be infected must be tested against a number of antisera.

As part of the research, graduate assistant James W. Moyer of Dayton, Washington, devised a new procedure for developing purified preparations of the virus. Spherical and bacilliform virus particles are separated by a laboratory process called differential precipitation, using polyethylene glycol 6000 and sodium chloride.

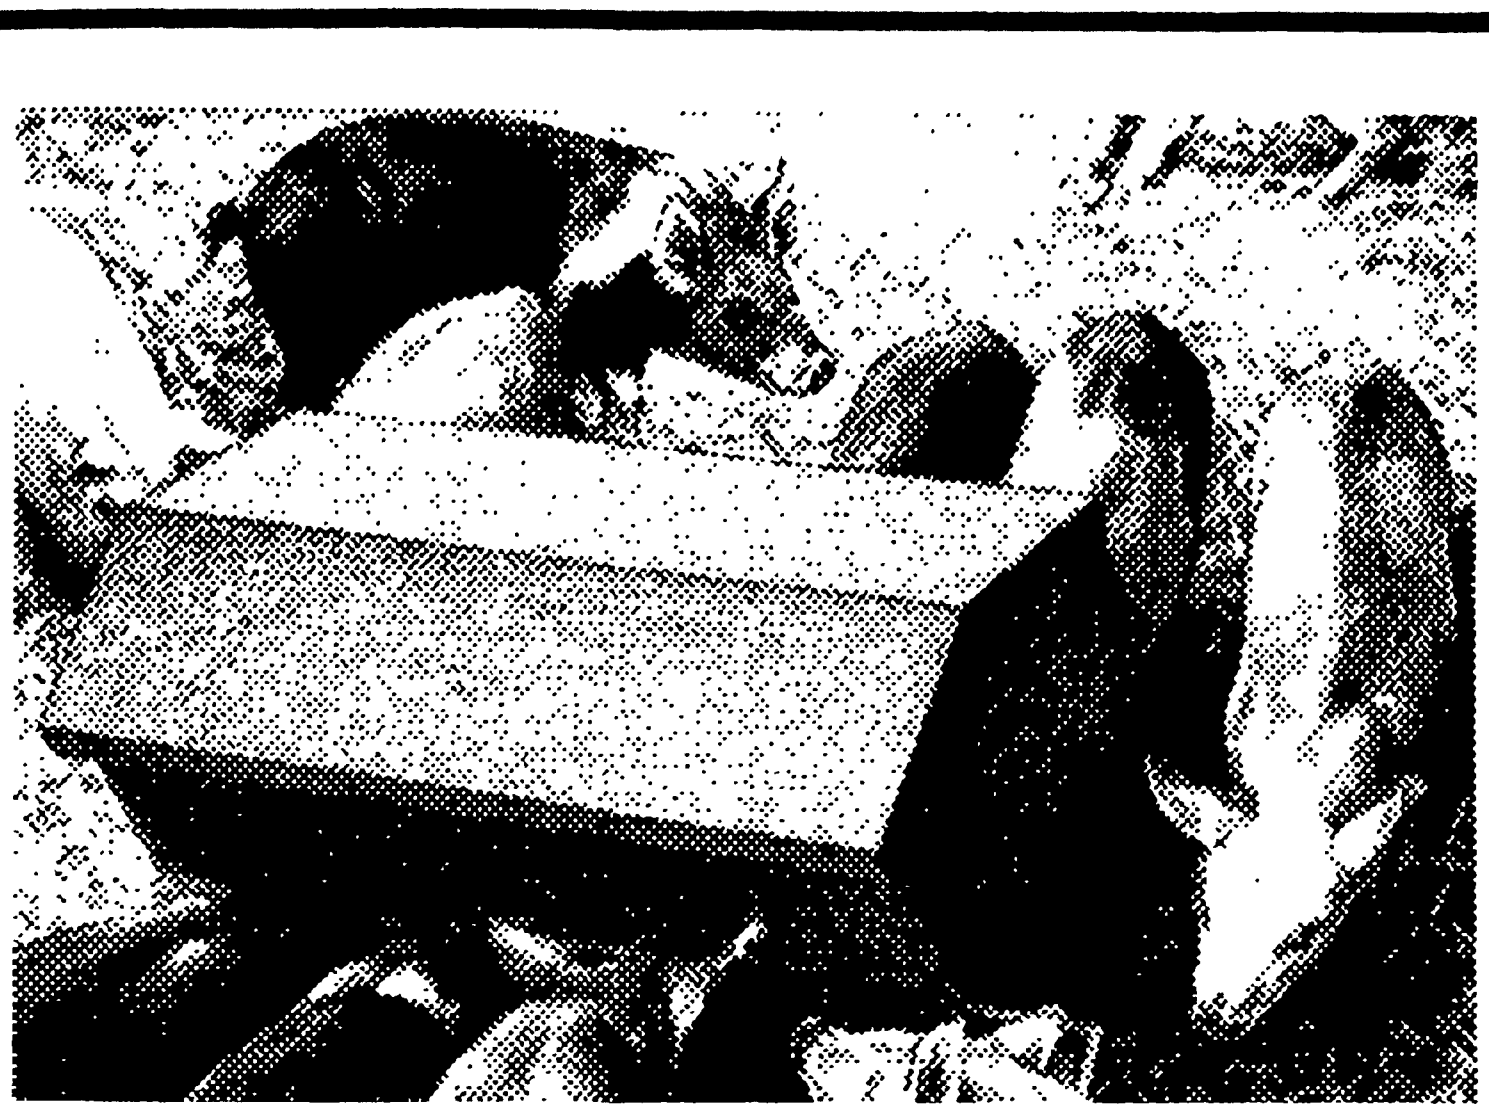
The virus particles are further purified by another laboratory process, sucrose density gradient centrifugation, and are then used for antibody production.

To insure accuracy in testing for the virus, both healthy and diseased cultures are needed of some 30 strains of mushrooms grown in Pennsylvania. These are called "matched pairs" of mushroom strains from white to brown and will be collected from distinct mushroom growing regions of the Commonwealth.

Moyer says the testing procedure is relatively easy to conduct when compared with existing methods. Additional research is underway to determine the most appropriate time to test for the virus during the crop's growth.

"Our work is a step in the right direction, but there is more research needed before testing is available to diagnose all mushroom viruses. Once the antiserum can be produced, then the final step will be to establish clinical procedures for virus detection and to determine a cost to cover the diagnostic procedure," Moyer stated.

When fully developed, the new detection or indexing method should replace two procedures now used. The one is electron microscopic examination of mushroom tissue extracts for virus particles. The other involves culturing questionable tissue, together with a healthy isolate of the same strain, on potato dextrose yeast agar and comparing growth rates. Neither method is specific for the virus. Also, both methods are subject to errors in interpretation.



THE EFFICIENCY FACTOR
helps you get hogs
to market weeks earlier

In tests comparing the performance of pigs fed AUREO S. P. 250 with unmedicated pigs, those fed AUREO S. P. 250 showed 31% faster daily gains and 10% better feed efficiency.

With gains like this, pigs started on AUREO S. P. 250 at 15 pounds would reach 75 pounds **three** weeks before those not receiving any feed additive.

But fast gains are only part of the story. Besides improving rate of growth and feed efficiency, AUREO S. P. 250 helps control bacterial scours, reduces the incidence of cervical abscesses and maintains weight gains in the presence of atrophic rhinitis. In addition, it aids in preventing these diseases during time of stress.

And, you can improve your pigs' efficiency still further by use of TRAMISOL dewormer. TRAMISOL is the only wormer that controls lungworms as well as round worms and nodular worms.

4-Hers observe Citizen's Day

CHICAGO - September 17 is Citizenship Day. It marks the beginning of Constitution Week, a time for study and reflection on the events that led to the signing of the U.S. Constitution in 1787.

Among the many Americans observing Citizenship Day and Constitution Week will be 368,000 young people from 9 to 19 in the national 4-H citizenship program. Under the supervision of the Cooperative Extension Service, these 4-H'ers take part in year-round activities intended to increase their interest, understanding and knowledge of the rights and duties of American citizenship.

4-H members learn by doing to fulfill their responsibilities as citizens of the community, county, state and nation. They show concern for the welfare of others through participation in service projects and meaningful involvement in civic organizations.

The national 4-H citizenship program was established in 1948 to honor Thomas E. Wilson, founder of Wilson & Company meat packers and Wilson Sporting Goods Company. Wilson, nationally renowned for his support of 4-H, was one of the founders of the National 4-H Service Committee and served as its president from 1924 to 1958.

In 1973, friends of Kenneth H. Anderson established a scholarship fund to recognize his many years of service to 4-H. Anderson is associate director of the Service Committee and has served the organization for 37 years.

Awards for 4-H'ers who excel in citizenship activities are donated through the Service Committee in memory of Thomas E. Wilson and by friends of Kenneth H. Anderson. Award winners are selected by the Extension Service on the basis of their accomplishments in 4-H and civic projects.

This year, six outstanding 4-H'ers will receive expense-paid trips to the 54th National 4-H Congress, Nov. 30-Dec. 4 in Chicago, and college scholarships of $800. During the congress, the high-ranking boy and girl will be presented with silver trays in the name of the President of the United States.

Additional information on the national 4-H citizenship program is available from county extension agents.

Fish kill investigated

HARRISBURG - The Department of Environmental Resources and the Pennsylvania Fish Commission are continuing their investigation into a fish kill which occurred during the latter part of August on a northern Lancaster County stream.

Tony Sabol, an environmental protection specialist in the Department's Harrisburg Water Quality Management Region III Office, said the kill occurred August 21 on Stony Run, a tributary to the Cocalico Creek, in East Cocalico Twp.

The incident, involving a number of sunfish, catfish, suckers, carp and minnows, took place after a quantity of liquid manure was disposed of at the Amos Hoover piggery, Denver R3.

Sabol said Hoover normally disposes of the material on his fields with a manure spreader-sprayer. On this particular occasion it was disposed of on a field, where cantalopes were recently harvested, which contained strips of polyethylene mulch and the manure flowed some 300 yards into the stream.

In an attempt to stop the flow of material, Hoover erected an earthen dam and also drew down his ponds to dilute the liquid manure.

Sabol said the kill affected slightly over three miles of stream and some of the dead carp lodged in two large pools in the Reamstown area where they created an odor problem.

He also noted that Hoover worked with township officials to clean up the stream and remove the dead carp, thus eliminating the odor problem.

Ag professor honored

Dr. George E. Brandow, professor of agricultural economics at The Pennsylvania State University, was honored recently for the quality of a research publication. Dr. Brandow received the Publication of Enduring Quality Award from the American Agricultural Economics Association during the organization's annual meeting at Ohio State University.

The publication, entitled "Interrelationships Among Demands of Farm Products and Implications for Control of Market Supplies," was judged to be the best research publication published in the field of agricultural economics from 1950 to 1964. It was issued as Bulletin 680 of the Agricultural Experiment Station at Penn State.

Brandow was named a Fellow of the association in 1966. He served as association vice president in 1958 and president in 1963.

From 1964 to 1966, Brandow was executive director of the National Commission on Food Marketing. He has served as a member of the National Agricultural Advisory Commission. He was technical advisor to the Turkish Ministry of Agriculture in 1953-54 and economist for the Joint Economic Committee of Congress in 1957. He was a lecturer at the Salzburg seminar in American studies, Salzburg, Austria, in 1964 and 1968.

He received the doctor of philosophy degree from Cornell University in 1939, specializing in agricultural prices and policy. He served as Extension economist at Cornell for a year. Then he was appointed to the agricultural economics faculty at Penn State. He has been with the University ever since, except for civilian and military service during World War II and leave for special professional assignments.

Pa. is largest producer of mushrooms

Pennsylvania led all states in the production of mushrooms with a record total 178.6 million pounds. Of this total 59.5 million pounds were sold for fresh market, while 119.1 million were sold for processing. The value of sales for the fresh market mushrooms for the 1974-75 season was $33.395 million compared to $23.829 million for the 1973-74 season. The value of sales for the processed mushrooms for the 1974-75 season was $45.933 million compared to $39.930 million for the 1973-74 season. Pennsylvania put 62,116,000 square feet into production during the 1974-75 crop year compared to 59,498,000 square feet the previous crop year. Intentions for the 1975-76 crop year are 61,930,000 square feet. This is a decrease of 186,000 square feet from the 1974-75 crop year.

Production of mushrooms in the United States reached a record high 299.1 million pounds for the year ending June 30, 1975. This topped last year's output of 279.5 million by seven percent, and continued the trend of constant production increases since the survey began in 1966. A total of 28 states are included compared with 26 states the previous mushroom year. Texas and Oklahoma are new to the program for the 1974-75 crop year and are not included in previous year totals. Pennsylvania continues to dominate production with 60 percent of the Nation's total. During the 1973-74 mushroom year Pennsylvania produced 57 percent of the U.S. mushroom production.

Growers received $147.2 million for the 1974-75 crop, up 19 percent from the 1973-74 value of $123.4 million. Growers averaged 49.2 cents per pound, compared with 44.1 cents a year ago. Most of this increase was realized because of the increase in fresh market sales. Fresh market sales increased to 126.1 million pounds this year, up 23 percent from the 1973-74 period, and accounted for 42 percent of the U.S. production. Fresh market sales in 1974-75 averaged 60.7 cents per pound, up 3.6 cents from the previous year. Processor usage of 173.0 million pounds was off 2 percent from a year earlier while processing prices averaged 40.9 cents per pound, compared with 36.7 cents in 1973-74.

An estimated 110.9 million square feet of bed and tray area were used in the production of mushrooms during the year, 3 percent over 1973-74. Yield averaged 2.70 pounds per square foot, a slight increase from the 2.60 pounds a year ago. Growers intend to increase production area for the 1975-76 season by 6 percent over the past growing season. If intentions materialize, total fillings will reach 117.2 million square feet.

Feedlot additives not harmful to environment

BELTSVILLE, MD. - When feed additives are fed to feedlot cattle, the additives are found in the fresh and stored wastes from these cattle, but not in feedlot runoff water or in soil of waste-fertilized plots, says Dr. Theron S. Rumsey, a nutritionist with the U.S. Department of Agriculture (USDA). Many people have expressed concern over what happens to feed additives when they are excreted by livestock.

Dr. Rumsey and his colleagues of USDA's Agricultural Research Service fed 28 steers and 32 heifers finishing diets containing the standard recommended amounts of diethylstilbestrol (DES), a growth promoting hormone; chlortetracycline (CTC), an antibiotic; and ronnel, an insecticide. An equal number of control steers and heifers were fed the same diets without the additives. These experiments were conducted at USDA's Beltsville Agricultural Research Center here.

The scientists analyzed wastes from the cattle for the presence of additives. Fresh wastes contained 68 percent of the DES, 17 percent of the CTC and 13 percent of the ronnel that was fed. After 3 months storage, 52 percent of the DES, 11 percent of the CTC and 3 percent of the ronnel remained in the waste. No measurable additives were found in feedlot runoff water.

"These wastes were spread on pastures for six months. No measurable amounts of DES, CTC, or ronnel were found in soil, or weathered waste," says Dr. Rumsey.

Youths show award winning livestock

Two members of the Twin Valley Future Farmers of America Chapter located at Elverson, participated at the Kutztown Fair recently by showing their animals. Steve Bleacher showed three of his Hampshire swine - two in the breeding gilt class and one in the market swine class. Darrel Stoltzfus showed his medium heavy weight Angus steer. Additionally five chapter members participated in the FFA Dairy judging contest, six in the Livestock judging contest, and one in tractor driving. The chapter also exhibited its two window displays in the vocational exhibit class at the fair.

Steve, the son of Mr. and Mrs. Oliver Bleacher of R3, Birdsboro, has built a swine breeding project as his vocational agriculture project. He exhibited three of the gilts he had bred at the fair. In the Hampshire breeding gilt class Steve finished first and second, but did not do as well in the market class. This was the first time Steve had shown any of his animals.

Darrel, son of Mr. and Mrs. Chester Stoltzfus of R2, Elverson and President of the Twin Valley FFA, exhibited his 1000 pound Angus steer in the medium heavy weight class. Darrel received first in his class, and was also first in his class in fitting and third in showmanship. Darrel has a small herd of beef animals as his vocational agriculture project and shows at many local fairs in both 4-H and FFA.

On Friday August 22 the annual Berks County FFA dairy and livestock judging contests and tractor driving contest was held at the Kutztown Fair. Clarence Jennelle, son of Mrs. Margaret Jennelle of R2, Elverson; Bill Harris, son of Mr. and Mrs. Robert Harris of Geigertown; Larry Stoltzfus, son of Mr. and Mrs. Ralph Stoltzfus of R1, Elverson; Harvey Bitler, son of Mrs. Virginia Bitler of R1, Mohnton; and Mike Aikens, son of Mr. and Mrs. Louis Aikens of Honey Brook represented Twin Valley in the dairy judging contest. Dairy judging contestants were required to judge four classes one of milking shorthorn cows, one of ayrshire cows, one of aged holstein cows, and one of yearling holstein calves. Two of the five Twin Valley contestants placed in the top ten. Larry Stoltzfus placed second and Mike Aikens tenth in the contest which was won by Michele Gladney of Kutztown.

Twin Valley contestants in the livestock judging contest were Robert Deeds, son of Mr. and Mrs. Robert Deeds of R1, Birdsboro; Doug Yoder, son of Mr. and Mrs. Thomas Yoder of R2, Elverson; Steve Bleacher, son of Mr. and Mrs. Oliver Bleacher of R3, Birdsboro; Darrel Stoltzfus, son of Mr. and Mrs. Chester Stoltzfus of R2, Elverson: Jan Oatman, daughter of Mr. and Mrs. William Oatman of R1, Honey Brook; Gail Fultz, daughter of Mr. and Mrs. Glenn Fultz of R1, Birdsboro; Livestock contestants judged a class of breeding sheep, a class of market swine, a class of breeding swine, a class of Hereford market steers, and a class of heavy weight market steers. Gail finished fourth in the contest, with Bob Deeds eighth, Jan Oatman ninth, and Darrel Stoltzfus tenth. Ray Zimmerman of Conrad Weiser won this contest.

In the tractor driving contest, each Berks County FFA Chapter is allowed to enter one participant. Twin Valley was adequately represented by Harvey Bitler. In this contest, each contestant is required to make a preliminary safety check on the tractor he will drive. He then hitches the tractor to a manure spreader and drives through an obstacle course. The spreader must then be backed into a stall within only two inches of clearance on each side. Finally contestants hitch to a four-wheeled wagon and pull it from a stall and back it into an adjoining stall with six inches of clearance on each side. Throughout the contest, drivers are scored on safety. This contest was won by former county FFA President Jeff Miller of Kutztown, with Harvey placing fourth in a class contest.

In the vocational exhibit class, the chapter safety exhibit received third place, while the exhibit on milk received eight place. Both exhibits had previously been shown at both the Reading and Allentown fairs.

In other recent shows, Larry Stoltzfus exhibited his dairy heifer in the Southeastern FFA Dairy Show and the Eastern Pennsylvania Black and White Show at the Kutztown Fair grounds. The heifer, Brook-Honey Needle Ada, placed twelfth in its class at the FFA show and Larry was awarded a blue ribbon for fitting.

In the near future the FFA chapter will be conducting its annual fall hoagie sale to sponsor the Elementary Pumpkin Growing Contest for all the elementary students in the Twin Valley District.

YMCA classes set

Registration for fall classes at the Lancaster YWCA will open Monday, September 8 and end on Saturday, September 13. Hours are 9:30 a.m. to 8:30 p.m. Monday through Friday, and from 9:30 to 1:30 on Saturday. Phone registrations will be accepted after September 9, excluding new enrollments in swim, gym and dance, which must be made in person (except those for children which parents may make).

"New Horizons," informal education classes for adults and teens, are scheduled for Tuesday, Wednesday and Thursday evenings. New this season will be a six-weeks course conducted in cooperation with representatives of Rape Aid and Prevention on Tuesdays from 7:30 to 9:30 p.m. Entitled "The Tragedy of Rape," the class will study the psychological and legal aspects of rape from the perspective of both victim and rapist. Cost is $12.00 for YWCA members, and $15.00 for non-members. The Lancaster Women's Center will present "Women Alone" on Thursdays from 7:30 to 9:30 p.m. The eight-week course will focus on the joys and problems of single, separated, divorced and widowed women, with emphasis on self-worth. It is $16.00 for members and $19.00 for non-members.

Wednesday daytime activities under the "Holiday at the YW" program reflect current popular interests. Morning classes from 9:30 to 11:30 a.m. include "Inexpensive Gift Creations" and "Fabric Fun," both suggesting Christmas gift possibilities.

A course on "Bread Making" will be offered from 12:30 to 2:30, teaching basic yeast breads and simple coffee cake, using various types of flours. A "Swim Clinic" will be held from 10:30 to 11:30 a.m. At the same time some women will opt for "Belly Dance, learning the art with Nabila. Arts, crafts and discussion groups will run for eight weeks and cost $14.00 with a special full day rate of $21.00. Holiday health, physical education and recreation classes will run 12 weeks, with classes priced individually from $6.00 to $18.00.

Youth activities include Y-Teen Workshops on Mondays from 4 to 7 p.m. and Tuesday Club for 5th and 6th grade girls on Tuesdays from 3:30 to 5:30. Big Sister Club meets on Wednesdays from 3:45 to 5 p.m. The YWCA Drop-in Center will continue its successful weekend sessions when young people from 12 to 18 years of age may participate in sports, games, dancing and special events on Saturdays from 5 to 11 p.m. and on Sundays from 1 to 10 p.m. One membership card is good for all activities for a year and costs $2.00 for students 17 and under.

In the Health, Physical Education and Recreation program, preschoolers from six months to six years of age may take gym, swim, rhythms, rhythmic movement and, new this year, tap and ballet. Half-hour classes are 12 weeks for $12.00, and the dance class will be 12 weeks at $15.00 for ¾ hour or $24.00 for 1½ hours combined tap and ballet.

For physical fitness, juniors and teens, ages six to 17 years, may choose ballet, baton, gymnastics, jazz, tap and modern dance , karate, swimming and the new Sports Workshop to develop skills in basketball, badminton, volleyball and gymnastics.

Most classes will be for 12 weeks at $12.00 or $15.00. The new "Saturday Special" offers special rates for taking two or more activities on Saturdays.

Adults, 18 and up, may participate in belly dancing, gymnastics, jazz, modern and tap dance, karate, yoga, slimnastics, swimming, tennis, volleyball and dips (recreational swim). Modern Dance for Men will be repeated on Wednesdays from 8:15 to 9:30 p.m. Length of course and prices vary.

All classes begin the week of September 15. Sign-up for Y-Teen Workshops is September 15, for Tuesday Club, September 16 and for Big Sister Club, September 10. Teen dances start on September 5 and will be held every other Friday night. Drop-In Center is in continuous operation on weekends. For complete details, you may pick up a program at the YWCA, 110 N. Lime St., Lancaster, or call 393-1735. The YWCA serves the city and county with membership categories for men and women, girls and boys.

"Let us never forget that the cultivation of the earth is the most important labor of man."

Show winners named Southeastern Sheep

Starr Hamilton, Cochranville and Gary Barrett, Cochranville were among the winners at the S. E. Penna. 4-H Sheep Show. Gary's Shropshire ram won championship honors, and Starr placed first with her ewe in the commercial class.

The Southeast Pennsylvania 4-H Sheep Show was held August 23 at the Kimberton Fair Grounds, Kimberton. Four-H members from eight counties competed in the show. Professor Glenn Kean, Penn State University was official Judge.

Local 4-H members fared quite well in the competition. In the showmanship contest, winners in the senior division were Ann Baroni, Downingtown and Joan Liesau, Spring City. Roger Davidheiser, Pottstown placed first in the junior division and Robert Blumenthal, Chester Springs placed second. Champion first year showman was Cindy Gilbert, Delaware County; reserve champion was Lisa Delay, Pottstown.

In the Dorset show, Beth Nehoda, Bucks County showed the champion ram and the champion ewe, and Jeff Baroni, Downingtown, showed the reserve champion ram. Jeff's sister, Ann had the reserve champion Dorset ewe.

Joan Liesau, Pottstown showed the champion Hampshire ram. Champion and reserve champion ewe were shown by David Lytle, New London.

Champion Shropshire ram was a yearling owned by Gary Barrett, Cocharnville. Marcie Myers, West Grove, and Chuck Soulliard, Steelville showed the champion and reserve champion ewe.

Starr Hamilton, Cochranville showed the winning commercial ewe.

The show concluded with a one-hour blocking contest. Participants had one hour to block a lamb that has never been worked on before - to shape and condition the fleece with the use of hand shears, wool cards, etc. This is a very grueling contest that really tests the knowledge and ability of the contestants. Jeff Baroni, Downingtown won the junior division; Joan Liesau, Spring City, won the senior division. Lambs for the contest were provided by Warn Menhennett, Cochranville.

NCFC discusses co-op issues in new booklet

WASHINGTON, D.C. - The National Council of Farmer Co-operatives has announced publication of a new booklet on current co-op issues titled "HARD QUESTIONS AND STRAIGHT ANSWERS ABOUT FARMER COOPERATIVES."

The booklet is part of a campaign which the NCFC is conducting this year to more adequately inform Congress and the Executive Branch about the operations and economic contributions of farmer cooperatives.

National Council President Kenneth D. Naden said the NCFC campaign was aimed at presenting factual, straight-forward answers to questions being asked by some legislators and executive policy makers about the role of cooperatives.

"Co-ops have been fair game for the past couple of years," said Naden. "And they still are with emotionalism running high over rising food prices and concentration in the food industry. So we thought it was time to set the record straight and tell our side of the story."

The NCFC booklet discusses such key issues as: (1) Are Co-ops Too Big and Too Powerful? (2) Does Co-op Growth Pose A Threat to Fair Competition? (3) Do Co-ops Raise Food Prices? (4) What Are The Facts About Undue Price Enhancement? (5) Is the Capper-Volstead Act Outdated and In Need of Revision? (6) Do Co-ops, Through Federal Marketing Orders, Cause Inflation? (7) Is Management Taking Co-op Control Away From Farmer Members? (8) Has the Capper-Volstead Act Made It Possible For Co-ops To Manipulate Food Markets? and (9) Do Today's Farmers Really Need Co-ops?

Naden said the booklet is a good reference piece for members of Congress, federal agencies, state legislators, educators, consumers and the media. Free copies are available from the National Council of Farmer Cooperatives, 1129 20th Street, N.W., Washington, D.C. 20036.

PennAg Convention slated for Sept. 17-19

Transportation, Personnel and Energy will be the key topics of a discussion program Thursday afternoon, September 18th. This seminar will be presented by PennAg Industries Association as part of its convention to be held in Gettysburg September 17th, 18th, and 19th. The conventioneers, hailing from all parts of Pennsylvania, manage agri-businesses that buy from or sell to farmers.

Robert E. Harridge, Director of Transportation, Agway, Inc. will get the program underway with a speech on "The day after yesterday." He will discuss the transition that is now underway in the transportation industry. With the Northeast railroads, so vital to agriculture, detourating and the solution still up in the air, Mr. Harridge's discussion will center on what his company is doing in light of the present situation.

Agribusiness has evolved into a complex computerized industry in the past decade. Personnel specialists are becoming more important in Pennsylvania's agribusiness community. Elizabeth R. Kent, Personnel Director for Beacon Feeds, New York, will speak on "Personnel Problems in Agribusiness."

"Energy, Crisis or Rip Off?" will be the final subject, of the program.

When she gets droopy, so does your milk check.

With Waynextra protection you can fight back against daily production stress and sub clinical disease which too often keeps good cows below the profit line

Mix Waynextra for Dairy into their feed It provides more than vitamins alone More than mineral balance More than just an antibiotic to fight disease

Waynextra is a blend of all these health savers carefully balanced at highly effective levels It can trigger startling results from medium and low-producing cows And add still more to what you get from high producers Waynextra also helps improve feed efficiency and rate of gain in calves

Give your herd Waynextra protection It's a proven help for droopy milk checks See your Wayne Dealer Or, write Allied Mills, Inc 110 North Wacker Drive, Chicago, Illinois 60606

E-Town Jaycees slate community fair

The Elizabethtown Jaycees will be holding their annual community Festival September 17 through 20, Gary Myer and Joe Maher, Festival co-chairmen, announced today.

This year's Festival, again featuring the Market Place Fair, will be held at the old Kiwanis farm-fairgrounds, now part of the Elizabethtown College campus.

The categories for the Market Place Fair are taken from the official Pennsylvania State Farm Fair Book (with the department numbers corresponding to those in that source).

They Are:

Dept. No. 3 - grains and vegetables

Dept. No 4. - fruits

Dept. No. 5 - home and dairy products

Dept. No. 7 - floral exhibits

Dept No. 8 - group exhibits

Dept. No. 9 - domestic and fine arts

Dept. No. 10 - youth exhibits.

Exhibits will be received Monday and Tuesday, September 15 and 16, from noon till 9 p.m. at the west end of the exhibit building on the Festival grounds on Kiwanis Blvd. off College Avenue.

Exhibitors should take note, however, that perishable items will be accepted only between 6 and 9 p.m. on Tuesday.

Judging will be held Wednesday, September 17, and the exhibits will be open to the public at 6 p.m. that evening, when the Festival begins.

Cash premiums will be awarded for the winning entries.

Entry fees will be based upon the number of entries per department on the following scale: 1 to 5 entries in a single department - $1; 6 to 10 - $2; 11 to 15 - $4; 16 to 30 - $6; and 31 or more - $8.

Full details of the Market Place Fair will be included in the Festival pamphlet which will be distributed to some 22,000 homes in a fifteen mile radius of Elizabethtown shortly before the Festival.

Interested persons outside that area may obtain more information by sending a stamped, self-addressed envelope to the Elizabethtown Jaycee Festival, P.O. Box 51, Elizabethtown, Pa. 17022.

The Festival, the largest such event between Lancaster and Harrisburg, is a direct outgrowth of the annual community picnic begun in the northwestern Lancaster County town over twenty years ago. Through the years, game stands were added, and, by the late 1960's the picnic had become a full-day affair.

In 1971, it was expanded to two days and, in 1972, with the introduction of professional carnival rides, to four days.

Last year, the Festival took a major step toward becoming an actual fair, when handicrafts, art works, and farm products were exhibited in the Market Place Fair. Public response was overwhelming. There were over 1,300 exhibits, and over $1,200 in prize money and scores of ribbons were awarded.

The continued growth of the Festival and the addition of the Market Place Fair meant that a new location had to be found this year. "We simply out-grew the borough park," said Gary Myer, who has managed the Festival for the past three years.

So, the Festival is moving to the Kiwanis fairgrounds where an annual farm fair had been held up until 1960. Those grounds passed to Elizabethtown College in the mid-1960's and now serve as the headquarters of the college maintenance department.

"In view of the past use of the grounds and the present nature of the Jaycee Festival, we are allowing the Elizabethtown Jaycees to use the facilities," said James L. M. Yiengst, director of public affairs at the college.

The move also means that this year's Market Place Fair will be held indoors rather than in a tent as it was last year. This will provide increased security for the exhibits as well as better display facilities.

Ten professional carnival rides for all ages, over two dozen game booths and food stands, and a number of commercial and cultural exhibits will also be offered at the Festival.

There will be a special kiddie hour from 1 to 2 p.m. on Saturday, September 20, with attractions for the younger set and a giant fireworks display that evening.

"The 1975 Elizabethtown Jaycee Festival will be the biggest and best one yet. It's an affair for the whole family," said Festival co-chairman Joe Maher.

Cowtown rodeo results

Kaye Kirby one of the top contenders for the National Finals Rodeo to be held in Oklahoma City in December, won first in two events at the Cowtown Rodeo Saturday night. Kaye won $150.92 for a mark of 73 in Bare Back Bronc Riding and with a mark of 66 in Bull Riding took home $276.36 for first in that competition. Kaye also came up second in Saddle Bronc Riding for another $83.79, making him the outstanding money winner of the evening.

Willie Ed Walker marked a 60 for first in the Saddle Bronc Event and made $111.72.

Dianne Sleeter, who is now 14th. in the National Standings for Girl's Barrel Racing, was first again this week making the race in 18.37 Seconds for $137.20.

Smokey Smith made $119.56 for roping and tieing his calf in 14.3 seconds.

The Steer Wrestling event was won in a very short 4.2 seconds by Steve Dubrovsky for $197.96.

This was the last scheduled rodeo for the 1975 season for Cowtown. The date of the rodeo scheduled for the benefit of the Boy Scouts of America has been changed from September 6 to September 27, so there will be no rodeo at Cowtown on September 6, 1975.

Cowtown Rodeo will open in Madison Square Garden, New York City on Sept. 17 and continue through Sept. 21.

21,433 people came in threatening weather to see 92 cowboys and girls vie for a total purse of $2,484.30.

(Continued from Page 50)

CHEMICAL LIGHT

A unique new device that generates light without heat or flame, yet can illuminate

an average room and give sufficient light for reading or working, is now being marketed by Chemical Dynamics, Inc. South Plainfield, New Jersey.

Called CYALUME Chemical Light, the device is made in the form of a compact, completely self-contained plastic tube containing two sealed liquids. The light is activated simply by bending the tube, allowing the chemicals to mix together.

Because CYALUME's yellow-green is so distinctive, and because it is safe in areas which have possibly explosive gases or fumes, it is particularly useful in industrial situations which require extreme safety procedures; g.g., underground coal mining.

Another major benefit of the CYALUME lightstick is that its light shines in all directions, and is not confined to a narrow beam, as is a flashlight. Yet the CYALUME lightstick gives three full hours of useful working light, plus an additional 8 to 10 hours as a marker light.

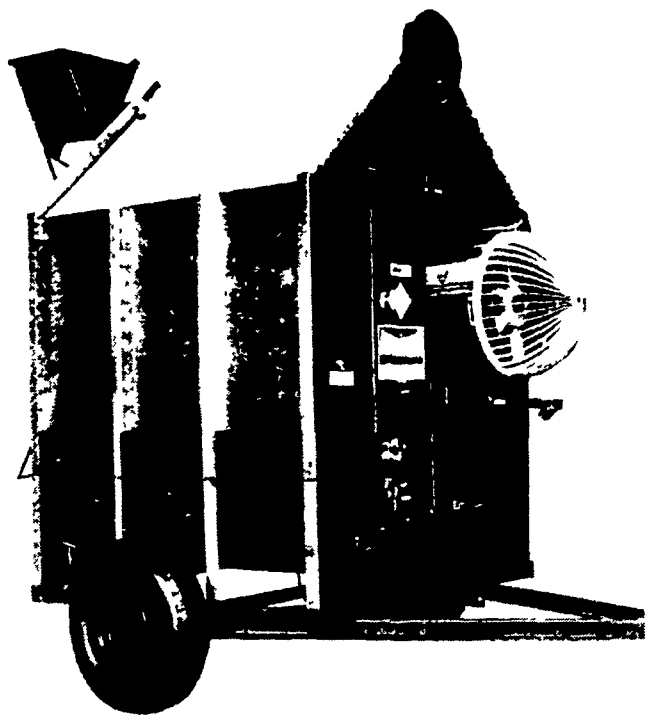
It is therefore ideal for use as an emergency flare for autos, boats, campers or trucks; as a signal light to direct traffic; or as a viewing light while changing tires, repairing engines or even reading cockpit panel instruments.

Since it is self-enclosed, CYALUME is impervious to wind and water, making it a real winner in such recreational fields as skiing, boating, scuba diving or night fishing. Its size and shape - about that of a cigar - make it convenient to carry and store. It will not corrode or break, and works 10 to 20 times longer than normal flares - even under water.

Inquiries should be addressed to: Chemical Dynamics, Inc., P. O. Box 395, South Plainfield, New Jersey 07080.

GRAIN DRYER

American Farm's Model 1503 has a well-earned reputation as the "Little Giant" in the grain drying field. The unit, with a daily drying capacity of up to 1400 bushels per 24 hours (5 percent moisture removal), was designed to match the harvest capabilities of the light two-row combine. With its compact low profile construction, only 5' 3" wide, 8' 4" high and 9'9" long, the 1503 can be easily transported on its own wheels or installed permanently in a grain handling system. It is fully automated with American's "Repeating Programmed Cycle". As long as wet grain is available in the holding tank, the dryer will continue to fill, dry, cool and empty itself without additional help 24 hours a day.



The 1503 will handle grain at high moisture levels . . . 25 percent to 35 percent. Depending on the moisture content and weather conditions, drying and cooling period controls are independent of each other and can be changed to meet changing crop or humidty variations. During the drying period, alternate bursts of hot and natural air assure quality drying. Moisture is extracted rapidly but gently and the grain is not overheated. This tends to prevent overdrying, kernel cracking and damaged grain.

Model 1503 is used extensively by corn growers but is also employed in drying small grains, beans, rice, soybeans, peanuts, sunflower and other seeds.

Additional information can be obtained by writing American Farm Equipment Co., 340 E. Main St., Lake Zurich, Ill. 60047.

NEW TOW BAR

MILWAUKEE, WIS. - A new pickup tow bar is now available from the Allis-Chalmers Corp. Agricultural Equipment Divisions.

The unit mounts quickly and easily to a pickup or other vehicle to be towed. It is designed to fit any bumper, either straight or slanted, and can be used at speeds up to 25 mph.

The tow bar is constructed of 14 gauge square steel tubing and ¼ in. steel plate for maximum strength and reliability.

When not in use the bar can be locked into an upright position. The hitch pin and all necessary hardware is included for easy assembly and mounting.

For additional information, contact the Allis-Chalmers Corp. Agricultural Equipment Divisions, Parts Merchandising, Box 2629, West Allis, Wisconsin 53214.

NEW FORAGE HARVESTER

A new forage harvester line, designed for use with tractors having up to 175 H.P., is now available from

What's New . . .

(Continued from Page 62)

Badger Northland, Kaukauna, Wisconsin.

Unique features include: a fully enclosed oil bath transmission providing forward, neutral and reverse; quick gear interchange for length of cut; 26" cutterhead with carbide faced helical cutting knives; 25½" throat opening; a 36 x 9 inch blower for superior blowing capability.

Other features include: left hand draft design for straight line pull of wagon; manual or full remote hydraulic-electric controls, and a wide machine width which allows corn harvesting with dual wheel tractors.

Both models are designed to handle a crop head or hay pickup. Model 2000 is available with a five foot hay pickup, a one row crop head or a two row crop head that will harvest corn planted on rows 28 to 40 inches without adjustment.

The harvesting units available for Model 2600 include a six foot or a seven foot hay pickup, and a two row crop head that will handle corn planted on 28 to 40 inch rows without adjustment, or a three row crop head that will harvest corn planted on 28 to 32 inch rows without adjustment.

The hay pickup is built to harvest large quantities of forage in short order. The 22 inch auger in these units feature retractable auger fingers.

The Model 2000 is available in either a standard 540 or a 1000 r.p.m. PTO while the Model 2600 is built exclusively for 1000 r.p.m. tractors. Both are designed with straight line pull to minimize side draft in slippery fields and on hillsides. The PTO shaft runs nearly straight, even with duals on the tractor. The left hand delivery side loads trucks without wheel interference. Or turn the spout toward the rear and deliver forage into trailing wagons.

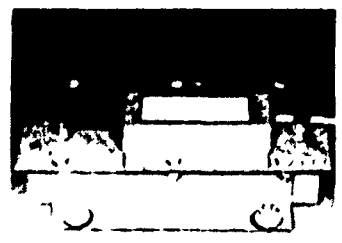
The cutterhead on the Badger Forage Harvesters weighs 240 pounds and rotates at 1,000 r.p.m. It can wade through the toughest crop conditions with ease.

Both models offer manual remote controls as standard equipment. Optional remote hydraulic-electric controls on the Badger Forage Harvester permit complete "touch of a button" control from the inside of big tractor cabs.

METAL DETECTOR

A new electronic metal detector, designed to warn an operator and help prevent damage by a stray piece of metal entering a forage harvester, has been announced by Sperry New Holland.

The metal detector, which is available in limited quantities this year, will be factory installed as optional equipment on the Sperry New Holland Model 980 Forage Harvester.



The detector works on a magnetic principle, according to Burkholder, and detection is limited to ferrous metals. When a piece of ferrous metal is detected as it is picked up in the field, an electronic signal automatically stops the forage harvester feedrolls and attachment drive before the metal can reach the cutterhead.

Under test conditions, the device has recorded a 97 percent accuracy rate in detecting ferrous metals. In these tests, examples of ferrous metals detected have ranged from broken rake teeth to smaller pieces of baling wire.

NEPPCO Convention slated

HERSHEY, PA. - Final plans have been inked for a busy, 3-day, fact-filled 44th anniversary exposition "which will compare favorably with those in the Harrisburg heyday" of the Northeastern Poultry Producers Council, according to officials of the 14-state farm organization.

Registration forms are being mailed to producers and allied industrymen this week. The exhibit display area promises to be one of the most extensive of recent years, according to Dr. John Dodge, NEPPCO President. A few good exhibit spaces are still available, he said, and can be reserved by calling the NEPPCO office at 215-547-0190.

The big annual show will be staged October 21 through 23 in the all-new Convention Center opened this past year in this resort city. It will be conducted under the theme, "Time for Decision."

Poultry-oriented participants will gather from throughout the northeast for the full three-day panorama of educational exhibits and talks, panels and seminars, youth and ladies programs, market egg and carton show and accompanying social events.

A far-reaching speaking program will carry poultry industrymen into the areas of alternative production capitalization plans, changing world food marketing patterns, the view down the track for transportation of necessary products, the present poultry health picture and a review of current and future high-impact industry concerns.

A money-saving early registration plan has been adopted by NEPPCO this year and is carried in the organization's initial mailing to the industry.

Power your dairy's vacuum system with the pump that's second to none:

Alamo

Quiet running.
Check valve prevents reverse operation.

Exclusive Surge oil reclaimer recirculates up to 95% of oil

Outstanding granger chosen

HARRISBURG - J. Mitchell Blose, farmer and educator of Yatesboro, Armstrong County, is Pennsylvania's 1975 "Granger of the Year." He was selected for the honor from more than 70 Grange members who were nominated from all sections of the state.

Blose, who with his sister, Melzena, owns and operates a 170-acre farm south of Yatesboro, will be honored at the 103rd convention of the Pennsylvania State Grange in Lancaster October 27-30. He will receive a plaque and cash award from the Farmers and Traders Life Insurance Company, co-sponsors of the event, according to J. Luther Snyder, state Grange master.

In addition to the farm, where 100 acres are in crops and beef cattle are raised, Blose has a wide variety of interests in religious, civic and scientific fields. For the past six years he has been an active member of Rural Valley Grange No. 1750 and now holds the office of master. He also is a member of Armstrong County Pomona Grange, the Pennsylvania State Grange, and the National Grange.

Blose is head of the mathematics department of Kittanning Senior High School where he has taught for 29 years. He also has been audio visual director for 23 years.

Among his many interests has been the development of a show, "The Magic of Math," that he has presented to many organizations in an eight-county area. For the past nine years he has been intensely interested in, and has done considerable research in the field of Unidentified Flying Objects, and has lectured on the subject many times.

Blose is a member of Gideons International and has helped place several hundred bibles in hotels, motels, hospitals, nursing homes and schools. He is active in numerous professional, fraternal, and civic organizations. In addition, he is a parttime salesman for the Texas Refinery Corporation, of Fort Worth, Tex.

Judges for the event were: Milton DeLancey, of the Pennsylvania Township Supervisors Association, Donald O. Cunnion, of the State Agriculture Department, and Charles Wismer, Jr. and N. Gale Moore, of the state Grange.

FFA'ers compete in judging contest

Three Twin Valley FFA members participated in the Livestock judging contest at the Allentown Fair. Robert Deeds, son of Mr. and Mrs. Robert Deeds of Birdsboro R1,; Steve Bleacher, son of Mr. and Mrs. Oliver Bleacher of Birdsboro R3,; and Darrel Stoltzfus, son of Mr. and Mrs. Chester Stoltzfus of Elverson R2, made the journey to Allentown for this contest. The Twin Valley team earned fourth place in the contest, and received a trophy for its efforts, with Bob Deeds turning in the highest Twin Valley score and capturing tenth place. Steve Davis of Kutztown won the contest, with the Kutztown team also taking first place in the team awards.

The two Twin Valley vocational window exhibits were also entered in the compeiton at the fair. The chapter safety exhibit, entitled Farm Safety Around the Clock Through Good Management, was awarded second place; while the exhibit on milk received fourth place. The Oley Valley FFA exhibit on Tractor Safety received first place in this contest.

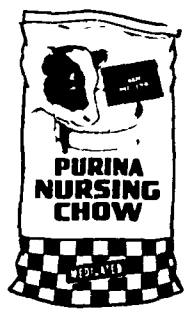
YOUR GOAL:

TO TURN EACH HEIFER CALF INTO A PROFITABLE MILK-MAKING MACHINE IN 24 MONTHS . . . OR LESS

The Purina feeding program helps you develop each heifer's full milk-making potential . . . and get milk income started months sooner.

NURSE–GRO

Nurse-Gro offers dairymen today's "Best Value" available in milk replacers. It is formulated with a mixture of milk and highly digestible vegetable proteins, and compares favorably with any of the more expensive milk-based replacers. Nurse-Gro has the "Flash-Mixing" qualities dairymen desire in their milk replacer.



NURSING CHOW

An all-milk base milk replacer that is a favorite with many dairymen. Flash-Mixing Nursing Chow mixes in moments . . . stays in suspension to give calves all the growth - building nutrients they need for fast growth.

CALF STARTENA

For over 35 years, the leading dry feed for young heifers . . . and now even more nutritious and better tasting than ever. Excels when it comes to satisfying all three requirements — palatability, nutritive content, and digestibility — that must be met in a no-compromise calf starter.

Starting at 4th day through 31 days	**Purina Calf Startena.** Feed free choice along with Nursing Chow or Nurse-Gro.
Beginning of the 2nd month	**Purina Calf Startena.** Feed free choice.
+Beginning of the 3rd month	**Purina Calf Growena.** Feed free choice, along with good quality hay.
Through the 4th month	**Purina Calf Growena.** Feed 6 lbs. per calf daily, with good quality hay free choice.
5th through 6th month	**Purina Calf Growena.** Feed 4 lbs. per calf daily, with good quality hay free choice.

*Starting at the 3rd month, feed Purina Dairy Mineral and plain salt free choice

PURINA BOVADINE

1 gallon
5 gallons
30 gallons

WHAT IT IS: A ready to use teat dip containing "Tamed Iodine."

WHAT IT DOES: When used as directed, Purina Bovadine aids in reducing the spread of organisms that can cause Mastitis.

ADVANTAGES:

1. Bovadine is highly concentrated, highly effective and ready to use straight from the package.
2. It's active against practically every known organism that causes mastitis.
3. Teat dipping with Bovadine as a regular part of a clinically proven Mastitis Control Program can reduce the incidence of mastitis by more than 50 percent.
4. Bovadine contains a skin conditioner which makes it gentle and non-irritating to cow and to milker.
5. Bovadine destroys mastitis - causing organisms in just seconds before they can enter the udder and trigger a flare-up.
